Subject: Purchase Recommendation – Smart Campus Lighting

Recommendation:

That the Board of Trustees approves the purchase of Intellistreets smart campus lighting from Illuminating Concepts Ltd. Inc. in the amount of \$278,282.

Rationale:

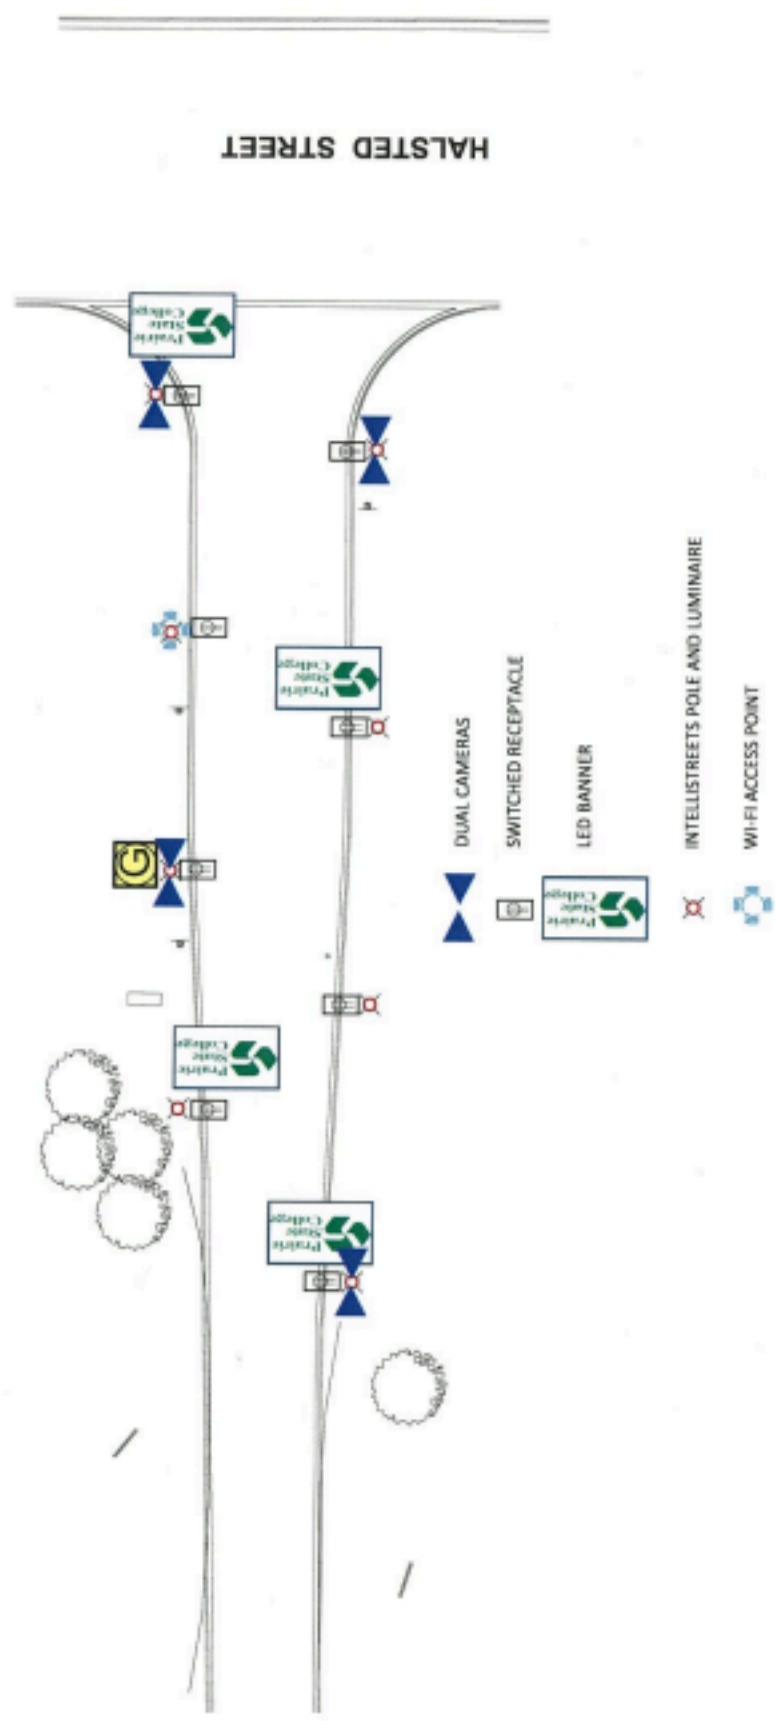

As I discussed in my January recommendation, part of my vision for Prairie State College involves modernizing the grounds, campus facilities, branding, marketing and profile in the district. Part of this vision includes taking advantage of new technologies that will enhance both the campus aesthetic and functionality for a post-COVID environment. I am re-prioritizing bond proceeds to this end.

These Intellistreets smart lights will completely revolutionize our front door into campus off of Halsted, and add elements of marketing, security, and wireless access that the institutional does not currently have. These smart lights will also prepare us to apply for additional grant opportunities and give us curricular opportunities for our students seeking careers in the technology field.

A mockup of the placement of these lights is included below. This company is a sole source provider of these smart lights, and uses LiveWire as an authorized service agent for the installation of these lights. That recommendation follows this one.

Funding Source:
Bond Funds

- Notes:
- Check the width (diameter) of the pier bases
 - Check the bolt circle and bolt square
 - What is the bolt size" e.g. 3/4"
 - Check distance between poles. I get around 45 feet by scaling it
 - Find out if we can get fiber to both sides of the road (very important)
