Climate Change: Refining the Estimates
How much can we expect the planet to warm over the next century? That depends on two things. The first is our carbon dioxide emissions. Anthropogenic, or human-produced, CO2 has...

Highlighting 📌 Translate 🌐

Scientists predict the climate using **computer models**. These simulations show how average **temperatures**, rainfall and other factors will change with the concentration of **greenhouse gases** such as **carbon dioxide** (CO₂). The main factor determining the level of CO₂ is human activity. Our CO₂ **emissions** depend on how much the nations of the world choose to lower energy use and switch to renewable sources of power.
