

Airplane Wall Mount Kit

In this kit:

1x- Mount Base

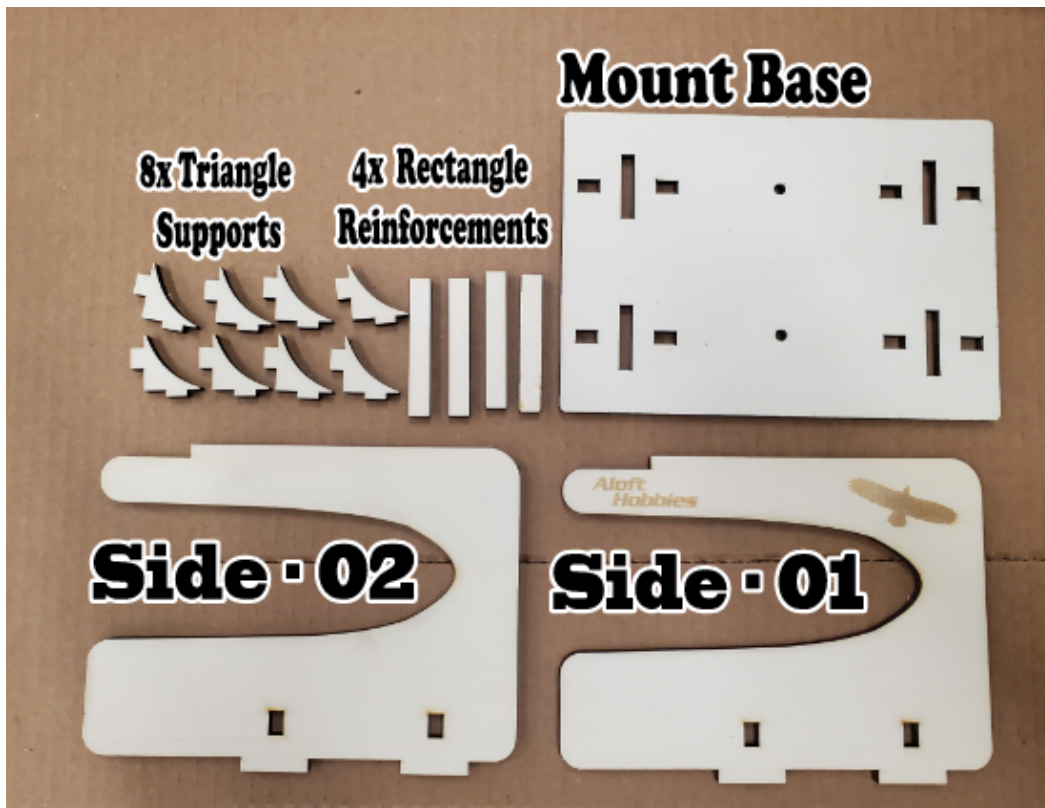

1x- Side- 01

1x- Side- 02

8x- Triangle Supports

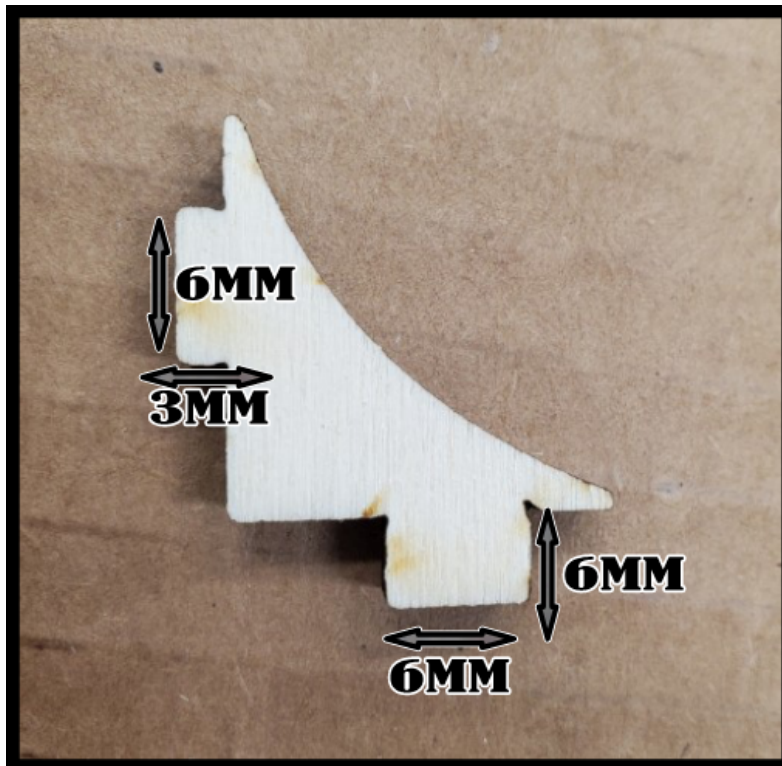

4x- Rectangle Reinforcement

You will Need: GLUE, white or wood glue for wood connections,
a little CA Super Glue for the foam works well.

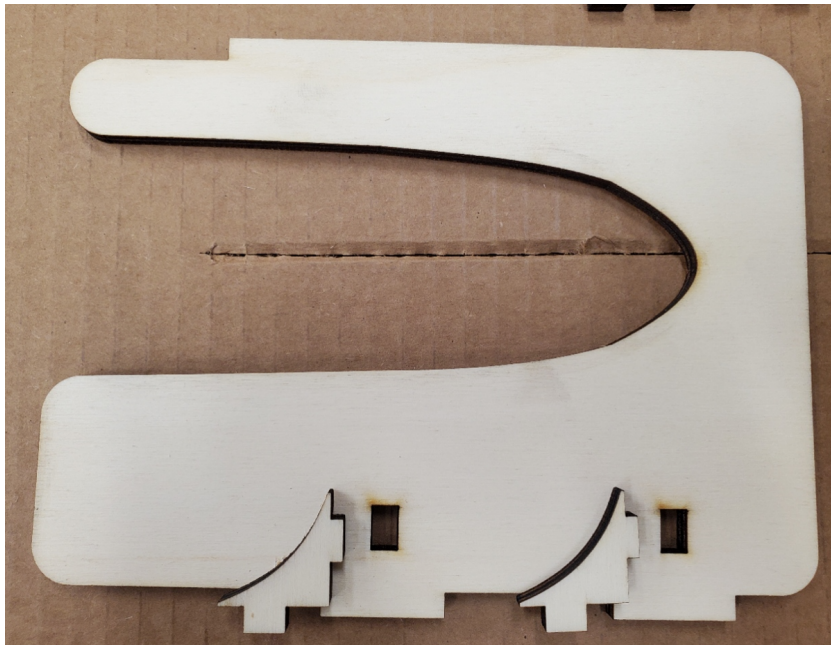

It is a good idea to dry fit the parts prior to adding glue.
The entire unit may be assembled prior to glue application.

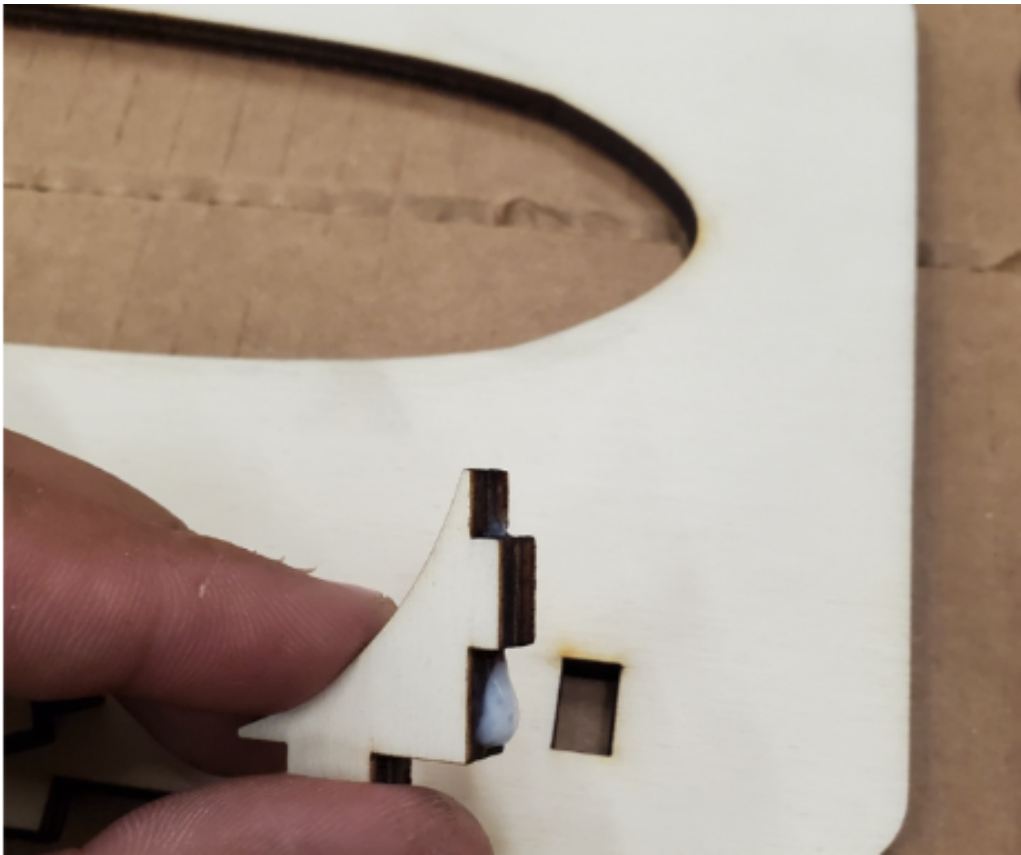

Identify the differences of the triangles supports,
there are two different tab lengths, 3mm on one side and 6mm on the other.
The 3mm tabs will go into the side panels, the 6mm will go into the base.

Test fit the triangles supports with the 3mm tabs into the sides.

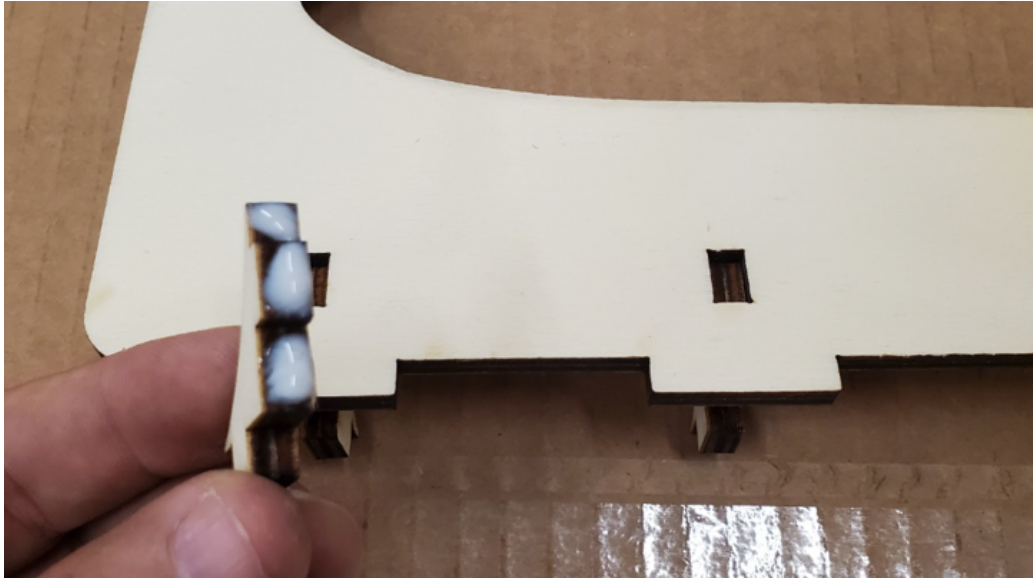

Then glue the triangles Supports.

Remember, the longer tabs will go into the base.

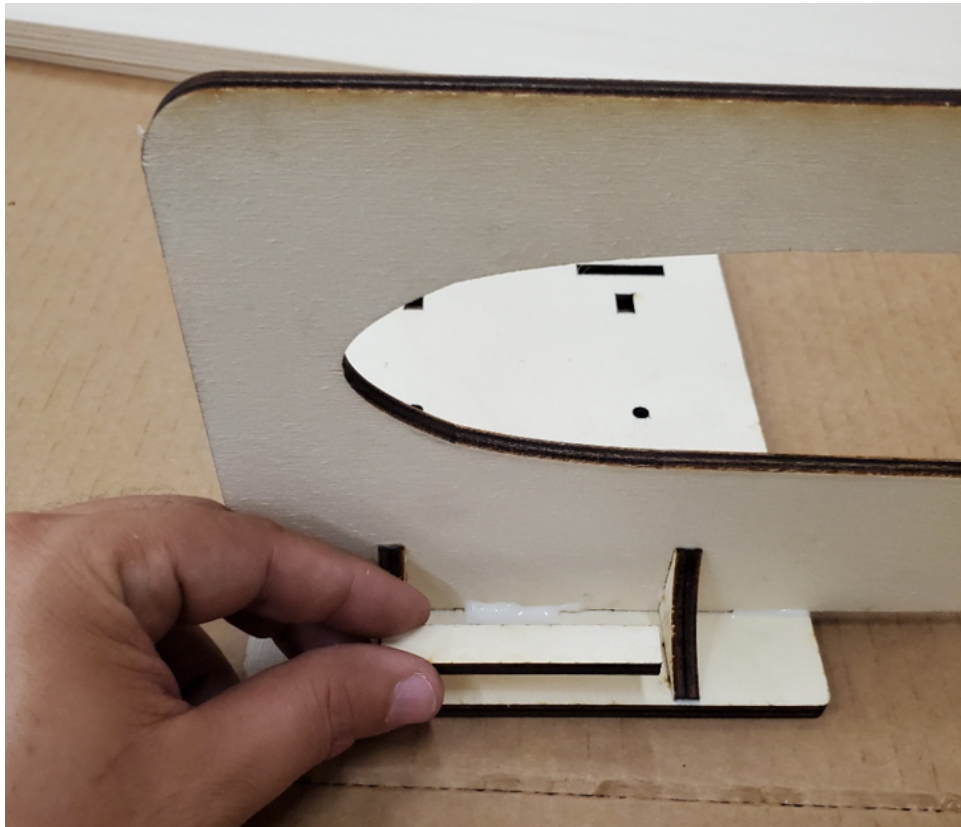

Now add the triangles to the other side.

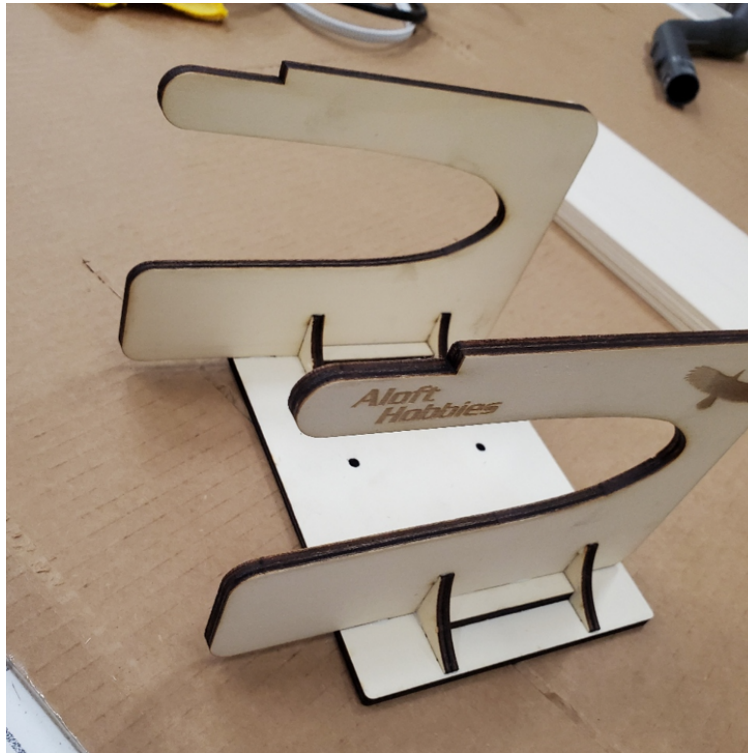

Now apply glue to the surfaces that will contact the base and insert the side into the base.

Position the rectangle reinforcements
between the triangle supports with a bit of glue.

Repeat these steps for the other side.

Button View:

Now we position the foam cushions.

The foam has double sided tape, but it can still lift off over time, so a bit of glue on the ends locks them in. Start by cleaning the area where the foam will be stuck down. A bit of light sanding and cleaning off the dust helps the double stick adhesive do its job.

A little CA glue at the ends will do the trick. The foam is CA safe.

Some glue for this end:

And some glue at the other end will do the trick:

Allow the glue to dry before use.

- Most of our wall mounts can also be used as ceiling mounts.
- Please ensure that your aircraft is secure and clearances are correct for your airframe.
- If you find that this mount does not fit your plane well, please let us know, if we do not already have a version that will fit your plane correctly, we should be able to custom make a new mount for you.

We hope you enjoyed this little project and it will bring many years of trouble free use.
