[Greetings!]

This April, be part of 2.50 Million Acts of Science during [Citizen Science Month](#)!

Everyone is invited to be part of 2.50 Million Acts of Science: share pictures of nature, sort through online images to look for wildlife, analyze data to help predict flu outbreaks, and more to fill import data gaps in scientific research. That's right, you can help fight Alzheimer's, track climate change, and even help discover new planets and species!

Typically, no specialized tools or experiences are needed and you can participate from anywhere.

1) **Find a project or event** on [SciStarter](#)! Check out our interactive Calendar or select from a featured list on [CitizenScienceMonth.org](#);
2) **Participate** in any project or event by following the step-by-step instructions on project page to log/analyze data;
3) **Report your "acts"** (the number of data points you shared or analyzed) using the form on [CitizenScienceMonth.org](#) or by replying to an email from SciStarter in April 2026.

Together, we'll make a meaningful and positive impact on scientific research!
