Title: Ball Blast Blaster

Name: Trenton C.

The first step I took was coming up with my idea. I got my idea from what my neighbor likes to play. I wanted to make a ball blaster to play with on the 3D printer. Then, I started making my design. I started making it first the base then I found a spring then I made the thing you hold on to. Then I made some extra pieces and then I was done. The second design was making balls for the blaster to use. The program I used was Tinkercad 3D designer.
