Have you restarted your computer?

Have you cleared the cache?

Have you updated your plugins/extension?

Have you tried running in Safe Mode?

Have you tried restarting with Add-ons disabled?

Have you disabled plugins/extensions one by one?

Have you tried resetting all user preferences?

Have you made a new profile?

Have you done a clean reinstall?

If this doesn't solve your problem, maybe it's

- [[Firewalls]] settings with a specific application (Norton, McAfee, Windows Firewall)
- A program you have recently installed and run (antivirus, web accelerator)
- Your hosts file
- Malware (download MalwareBytes)
