

Parliamentary Pledge

Take leadership to reject the automation of killing

Stop Killer Robots is a global coalition of 200+ civil society organizations across 70+ countries. We call upon parliamentarians around the world to take this pledge and encourage governments to begin negotiations on an international treaty on autonomous weapon systems. Your support will help safeguard against the ethical, legal, and humanitarian risks posed by autonomy in weapon systems and promote a more peaceful world now and for generations to come.

“We, the undersigned parliamentarians, are deeply concerned about the ethical, legal, and humanitarian risks posed by the development and use of autonomy in weapon systems. Machines should not kill people.”

We pledge to support our governments to negotiate new international law on autonomous weapon systems that rejects the automation of killing and ensures meaningful human control over the use of force.”

Signed,
