

Fostering Conservation through River Recreation Projects

Whitewater parks are popping up across the United States and abroad as municipalities and developers are recognizing the potential benefits of river-based recreation projects as a catalyst for conservation efforts, a place for the community to pursue healthy recreation, and potentially stimulate the local economy by branding their town as an outdoor destination. Join this session to hear the latest about some of S2O Design and Engineering's most innovative and unique whitewater projects including recent modifications to the Great Falls Diversion Dam in South Carolina, the Kearney Whitewater Park in Nebraska, the Eagle Whitewater Park in Colorado, and the Columbus Riverfront Project in Indiana.
