

Adapt Engine Delta - Release Notes

2022.1.10 December 2022

2022.1.10 Delta Release Notes

2022.1.10 Description	Release Notes	Issue ID
Typeahead searching only works on first codematcher.	An issue has been resolved where, on a searching screen with multiple codematcher elements, the typeahead searching only worked correctly on the first codematcher.	AD-12524
Horizontal bar does not display when zoomed in on workflow screens.	An issue has been resolved where there was no horizontal scrollbar on the workflow screen when viewed at greater than 100% zoom.	AD-12523
LinkedIn URL box causing screen display issues when populated.	Recent work had re-enabled the small <i>LinkedIn</i> profile widget which is no longer supported by LinkedIn. This has now been removed.	AD-12522
Journal note popup appears too far away from mouse cursor.	An issue has been resolved which caused the <i>Journal Notes</i> popup on the Journal Notes control to appear further away from the mouse pointer than it should.	AD-12521
Images on personal information segment are smaller since iframe fix.	An issue has been resolved where images on entity records appeared smaller than they were previously.	AD-12520
Workflows not closing upon completion.	An issue has been resolved which prevented some workflow windows from closing on completion. This issue only affected workflows that were opened by other workflows, where the workflow that opened them had closed.	AD-12519
Refine Search not working when refining by a different search.	An issue has been resolved where refining searches would only work if the original and refined search were of the same type.	AD-12518
Cannot export searches created by webservices.	An issue has been resolved which prevented dynamically created search results (constructed from webservices or	AD-12515

	by a BO rather than from running a search) from being exported to CSV.	
No tickbox column after refining a search.	An issue has been resolved which caused the selection popup for a set of refined results to appear on the original results instead of the refined ones.	AD-12514
Unable to select multiple search rows using shift and click.	An issue was identified where selecting one entity in a search result and shift-clicking another no longer selected all the rows in between. This functionality has now been restored.	AD-12513
Fields on profile page obscured by LinkedIn popup.	An issue has been resolved which caused the tooltip for the <i>LinkedIn</i> icon to appear when the mouse was over where the tooltip would appear. The tooltip will now only appear when hovering over the LinkedIn icon.	AD-12512
Restarting search and entering criteria can trigger reloading of previous criteria.	An issue has been resolved where cached criteria from previous searches were re-applied to the criteria entry after modifying one field.	AD-12510
Fast Find results not scrollable.	An issue has been resolved where the <i>Fast Find</i> results panel was missing a scrollbar.	AD-12509
Unable to edit notes from search results.	An issue has been resolved which prevented journal notes from being edited via the <i>Journal Preview</i> panel below a search result.	AD-12505
Ten search results per page displayed by default.	An issue was resolved that caused search results to always initially display 10 results for the first page, ignoring the default set in sysadmin.	AD-12501
Blank space on Search Options menu.	A CSS issue that left blank space at the top of the search results <i>Options</i> menu has now been fixed.	AD-12497
Cannot copy text from screens after viewing search results.	An issue has been resolved where the old "data security" code prevented anything from being copied after viewing a search result. The javascript that caused this issue has been replaced with a more modern CSS approach.	AD-12491
Large font on Roles section of Quickfind.	A CSS issue that could cause the font on the <i>Roles</i> section of <i>QuickFind</i> to display larger than expected has now been fixed.	AD-12490

Entity Tasks header margin is larger after navigating from Journal.	A minor display issue has been resolved, where an extra gap was visible on the Tasks segment after you had visited the Journal segment.	AD-12485
Flyouts not always loading.	The loading speed of flyouts has been improved, making them appear more quickly and reliably.	AD-12484
Flyout windows too narrow.	An issue has been resolved where flyouts using a templated segment had the incorrect width.	AD-12469
Tooltips not disappearing when opening entities from workstack.	An issue has been resolved where some tooltips would freeze and stay on screen long after the item they referred to was gone.	AD-12391
