[Step-by-Step Configuration Instructions](#)

[Troubleshooting Tips](#)

Features

The following provisioning features are supported:

- **Push Users**
 - Users in Okta that are assigned to the Malt application are automatically added as members to your organization in Malt
- **Import Users**
 - Users created in Malt can be imported into Okta and either matched against existing Okta users or created as new Okta users.
- **Push Profile Updates**
 - Updates made to the user's profile through OKTA will be pushed to the third party application.

Currently, Malt provisioning app does not support the following Okta provisioning features, but may in the future:

- **Deactivate Users**
- **Import Groups**
- **Sync password**

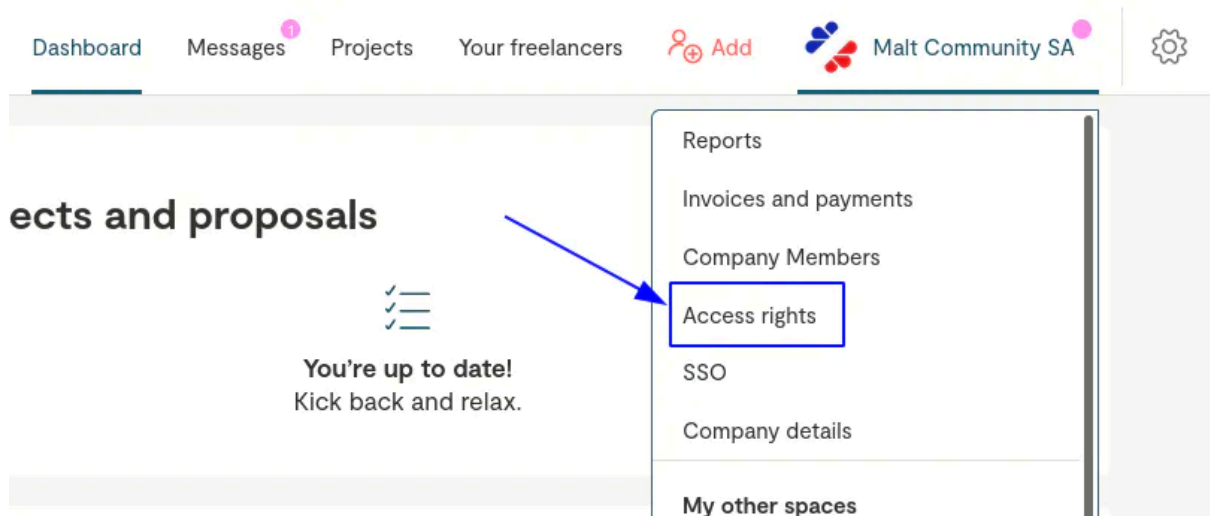

Requirements

Before you configure provisioning for Malt, you must reach out to the Malt Support team to activate the feature. (scim-support@malt.com)

Step-by-Step Configuration Instructions

In order to access Malt API to integrate your identity management system to our platform, you'll need an access token. You need to reach out to the Malt Support team to enable the public API feature (scim-support@malt.com).

You may access the access token management screen via the "Access rights" entry of your company's menu:

At the bottom of the screen that appears, you'll find a section dedicated to the Malt API:

Malt API

Access tokens

NAME	HINT	NOTE	CREATED ON	ACTIONS
------	------	------	------------	---------

Generate a new token

Token name:

Note (optional):

Generate token

To create a new token, enter a name that makes sense to you (and optionally a more detailed note), and click on "Generate token". Your new token will then be displayed to you. Make sure **to copy that token at that moment** and store it safely, as it won't be displayed ever after!

Your new access token

Make sure to copy your new access token now. You won't be able to see it again!

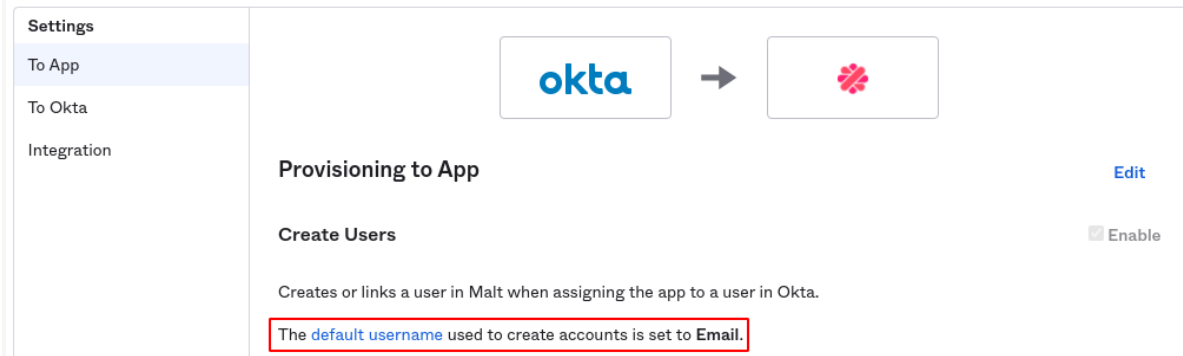

deb40193-97a4-4c8a-8a4b-cf14ce94d625

Back

In Okta, after generating the token, access the Malt application and complete the following steps.

- In **Settings**, select **Integration** from the left hand menu and then check the **Enable API Integration** box
- Fill the **API Token** field with the generated **token**. Click on the “**Test API Credentials**” button to check that everything went well.

You can now assign users to the Malt application and finish the application setup.

Important: Ensure that the “default username” used to create accounts in Okta is set to “Email”

Troubleshooting Tips

- Initial activation of Okta provisioning in Malt requires contacting the Malt Support Team, (scim-support@malt.com). Please reach out with any questions during your configuration process.
- The re-provisioning of a user that already exists at Malt will raise an error
- Malt scim integration does not support the modification of the username (email address).
- If you have questions or difficulties with your Malt/Okta SCIM integration, please contact Malt support via scim-support@malt.com
