

Artist Statement

Bacteria. It's something so vital to our planet. Something found in every microscopic crevice. Something so uncontrollable it is beyond chaotic. Nothing stops bacteria from growing; starting from a single cell- only visible under magnified conditions- it multiplies until it has engulfed the surface. It morphs, shapes, and grows in a form of intricate structures. So full of layers it is creating an art of its' own.

Most Used Materials

Silicone, shower curtain liner, embroidery thread
