ABSTRACT

The abstract contains a summary of the research objectives, methods, results, and conclusions. It should reflect the overall content of the article in a short and concise manner, no more than 250 words. Avoid using uncommon references or abbreviations.

Keywords: 3-5 words

INTRODUCTION

This section outlines the context of the research, the problem to be solved, and the importance of the research. The author is expected to provide a clear picture of the main problem behind the research. The support of relevant references is highly recommended to strengthen the background.

METHODS

The method describes the approach used in the research, including the research design, population and sample, data collection instruments, and analysis techniques. The description should be clear enough so that it can be replicated by other researchers. If using an existing method, provide appropriate references.

RESULTS AND DISCUSSION

This section presents the research findings systematically, in the form of text, tables, and figures. Discuss the results with reference to relevant theory or previous research. The authors should provide an interpretation of the findings and explain the implications of the results for environmental health.

Table 1
Table Headings Typed in Capital Letters Without Boldface

XXXXXX	XXXXXX				XXXXXX	
	XXXXXX		XXXXXX			
	N	%	N	%	n	%
XXXXXX	x	x	x	x	x	x
XXXXXX	x	x	x	x	x	x
Total	x	x	x	x	x	x

Interpretation of the table without re-narrating the numbers. At the same time, it is discussed by comparing previous research obtained from primary sources (journal articles or reference books). Can also use the researcher's opinion related to the table results. The use of primary sources is expected to be 80% from primary research sources with a level of novelty of the last 5 years. While primary sources in the form of reference books come from the last 10 years of publication. Tables are made in the form of an open table (using only horizontal lines on the upper border, lower border and partition between the table contents and the table head). Tables are made in the form of an open table (using only horizontal lines on the top border, bottom border and partition between table contents and table head).

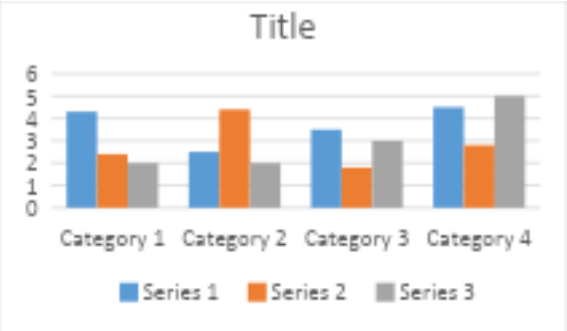

Figure 1.

Figure explanations are discussed by comparing previous research obtained from primary sources (journal articles or reference books). Can also use the researcher's opinion related to the table results. The use of primary sources is expected to be 80% from primary research sources with a level of novelty of the last 5 years. While primary sources in the form of reference books come from the last 10 years of publication.

CONCLUSIONS

The conclusion provides a summary of the main results of the study, emphasising the contribution and relevance of the study to environmental health issues. Avoid using new references or information not previously discussed in the article.

SUGGESTION

Suggestions contain recommendations based on the results of the study. This section may include suggestions for further research, policy or practice related to environmental health. Authors should ensure that suggestions are relevant and applicable.

REFERENCES

Use reference tools such as Mendeley, End Note and others. Using APA style.
The minimum number of references used is 20 reference titles.
Primary sources in the form of journal articles are expected to be min. 80%. Other sourcesmak.20%.
References from journals used in the last 5 years. Books from the last 10 years.

Note to Authors

1. Use language that is clear, straightforward, and in accordance with academic rules.
2. All references used must follow APA format accompanied by DOI or Url links.
3. Make sure each part of the article is organised according to this template to facilitate the evaluation and publication process.
