

Boise State Cyber Operations and Resilience (COrE) Senior Capstone

Cyber Security Risk and Vulnerability

As part of the **Cyber Operations and Resilience (COrE) Senior Capstone** at Boise State University, we empower students to support underserved communities by assessing their digital security. Our focus is on educational and government institutions that may lack the resources for professional assessments of their computer systems, networks, policies, and practices.

Benefits of a Risk Assessment:

- Gain a clear understanding of potential risks.
- Evaluate the likelihood and impact of those risks.
- Prioritize and manage risks effectively.

Benefits of a Vulnerability Assessment:

- Identify weaknesses in your systems.
- Use advanced tools to uncover security flaws.
- Take actionable steps to address vulnerabilities.

If you're interested in partnering with Boise State's COrE program for this **free service**, please fill out the fields below.

We look forward to helping your organization strengthen its digital security!

Available in Fall, Spring, and Summer semesters.
