

Agenda:

- Dev mode discussion
 - Daniel is migrating test cases to compile-mode, no more need to support dev-mode within Google.
 - Since 2.8 is a compatible release, removing dev-mode will go against what we said earlier.
 - People using 2.7 are still using dev mode, super dev mode is just barely working.
 - Daniel: make compile-test default in 2.8,
 - Also let people know what limitations come with JsInterop and dev-mode.
 - Drop it in trunk after 2.8.
- GWT 2.8:
 - Main missing feature is JsInterop
 - Expectation is that this will be complete by end of Sept.
 - Plan to release after JsInterop is done. Will accept Java8 patches from community, but those are not blockers for right now.
- Update on new compiler prototype:
 - Still working through compilation of Java features.
 - Plan is to have it capable of building complete apps by the end of the year.
