Steps to move data from excel into JMP

1. Open the data file in Excel

2. Select the data, being careful to select every cell that has data in it, but not any cells that are empty. Be sure you select from the very first column to the last column and from the very top road to the bottom row, including the row with calling names

3. Copy

4. Open JMP

5. Click File --> new --> open data table

6. Click Edit--> Paste with Column Names

7. Save with meaningful name

8. Have fun analyzing!!!!
