What are your main Challenges as an educator?

Drop your cursor in an open space and hit return a few times, then begin entering your ideas.

Completing all set management tasks on Time.

Time management

Developing an online space where the teacher can ‘talk’ the the students. Develop a page where information can be easily viewed and add to.
Have a drop box system that is easily assessable.

Getting students to work in their own time at home. Getting them to realise the importance of independent study. Getting them to look further into something - doing their own research, forming their own opinions based on research. Time to teach the content of teh course in lesson time.

Including ICT skills within lessons (ensuring all students have access to a working machine)
Getting students to think for themselves.

Engaging and motivating students to achieve to the best of their abilities.

Introducing change that is accepted and seen as beneficial by staff and instill a sense of ownership of the change.

Getting students engaged in their own educational outcomes through the use of both traditional and ICT mediums. This would include being more motivated to extend their research at home with quality time to expand their knowledge base.

Being able to best address the needs of a wide range of students

Preparing our students for a very different future to the one we had when we were at school. 21st century skills and literacies are essential for students (and teachers!) if we are to cope with the demands/ challenges of what may come.

Incorporating ICT strategies into content delivery to increase student interaction and feedback

Having the time to utilise the range of resources available

Developing new activities which challenge the technological abilities of students who generally come with a higher level of ability than teachers

Using technology in an engaging and productive way

Encouraging students to take responsibility for their own learning

Finding the time to develop new resources with technology to engage and motivate students

Staying current with new developments in technology

Keeping up to date with accreditation requirements as an individual

Time in order to incorporate new developments in education.

Subject Specific Goals
