In [1], we have encased the baneful side of the Internet for a case study of India-abusive cybercrimes. The rest of the paper is organized as follows. Section 2 presents PGF publications, software engineering student's March 2021 video presentation links. Section 3 presents PGF publications Modern Software Engineering students March 2021 video presentation links. Section 4 presents PGF publications Modern Software Engineering students March 2021 video presentation links of 51 students. Section 5 presents Cyberpolicing R&D work of PGF member's information given in the Cyberpolicing R&D Chief Prof. K. ChandraSekharaiah webpage.

Table 1, Table 2, Table 3, Table 4 and Table 5 depict Cyberpolicing for the software engineering problem of cybercrimes case study remedially explored. Students studied PGF research publications and created YouTube links for giving awareness to the pupils in the society.

The paper is organized as research gap section II, Objective of the research in section III, research methodology in section IV and findings & recommendations in section V, Future scope for research in section VI and conclusions in section VII.

II. Research Gap: On the charge sheet of FIR I, there was mention for supplementary charge sheet filed, when A2 is filed, but the supplementary charge sheet was not filed by the police department. In the FIR I police department case closed without conviction and prohibition orders of cybercrime case. It was very unbelievable that the Cyberabad police station, which is a professional organization, they failed to file charge sheet on FIR II. The KPHB police station filed the charge sheet on FIR I. Another research gap was the list of persons not available 2500 unknown registrations of the cybercrime case study.

III. Objective of Research: The main objective of the paper is national thinking of IT remedy for national loss. So there is no recurrence of similar kind of cybercrimes in future. Our research work is intended to prevent further spreading of this kind of similar cybercrimes. This means that there will be no similar fake governments coming up online in the future. To recover the national consciousness prevents or recover cybercrime legacy.

PGF is to make sustainable *management* of positive digital transformation in higher education a reality by successful cyberpolicing to defuse the FGolFGoT kind-of online fake governments in India. In this direction, we present a profile of our cyberpolicing studies and approaches. We aimed at the development of positive quality of digital national life (QoDNL) of Netizens for secure digital India. Our work contributes to prevent the recurrence of the incidence of a FGolFGoT - kind-of online fake governments. A developed system of networked websites with the details about such organizations to develop community settings for secure digital India that is free from India-abusive cybercrimes is presented.

IV. Research Methodology: we are approaching two methodologies for the cybercrime case study. These are, 1. Social Software Methodology 2. Website development methodology The founder of PGF Forum is Prof. K. Chandrasekharaiah & cyberpolicing researchers such as Prof. K. Chandrasekharaiah, Malathi, S Ravi Kumar, Sri Hari rao, Ramesh Babu, Atma Rao.

V. Findings & Recommendations: We find a cybercrime through the Wayback machine. It is a web forensic tool to get archived versions of the websites. We are cyberpolicing to the cybercrime case. In that fake website 2500 persons are registered unknowingly in the JNTUH academic environment. The guideline to Gol, GoT, GoAP recommendations for issuing probation orders for these types of cybercrimes.

VI. Scope for further research: There is an immense scope for research on the cybercrime case study. We are giving awareness of the cybercrimes in the society through various social software and website development methodologies. But it is not sufficient; India has a population of 130 crores. So that for every citizen has come forward for similar kind of process, which we followed. It is the best process for defusing these types of cybercrimes in future.

VII. Conclusions

This Paper provides a Cyberpolicing adaptive management for defusion of FGOIFGOT. It defines a remedial solution for the development of national virtues by different student streams in Telangana academics. The students read 40 R&D research publications and created 51 YouTube video presentation links. These presentations give awareness to the pupils and it moves ill-informed society to well informed society. Hence our work gives national consciousness and national solidarity of the India. Here our work gives knowledge based systems to defuse cybercrimes of cases. We present how PGF has endeavored for cyberpolicing solutions driven by the development of national virtues among multifarious streams of students in Telangana academics. PGF developed a cyberpolicing orientation and setting for the relevant organizational stakeholders in Telangana for defusing FGOIFGoT.
