

Master Prompts:)

Analyse:)

Analyze this YouTube channel's videos and observe how high-quality they look. With just five videos, this channel has gained more than 10,000 subscribers. I also want to create similar AI-based car restoration videos. Your task is to analyze this YouTube channel, the topics it has covered, and identify what is common across all the videos, as well as whether these types of videos already exist on the internet.

Topic:)

Now, I also want to create these videos using only AI. Please provide me with 10 video topic title ideas, numbered from 1 to 10. Make sure the titles match the style of the channel, and use premium luxury cars or rare, ancient cars wherever appropriate.

Scenes:)

Now this is my topic.

For now, just for testing, I want to make a 1-minute video. For that, analyze the topic and decide—using the power of artificial intelligence—what should happen in the video step by step.

For example (this is only an example, not fixed):

In the first scene, a person finds a car that is fully dusty and destroyed. In the second scene, he washes the car. In the third scene, he removes different parts of the car, then paints it, replaces or repairs the engine, fills oil and fuel, and completes the restoration. This example only explains the concept of how a destroyed car is found and restored. You are free to choose the scenes yourself, but they must make logical sense.

I will convert each scene into an image, and then convert that image into a video. Each video clip will be approximately 5 seconds long, so provide scenes accordingly. Also, make sure that scenes do not repeat. Sometimes AI repeats scenes, like showing a man just looking at the car again and again, but I do NOT want that.

Each scene must clearly show a different stage of the restoration so that when I combine all the clips, the video feels smooth and progressive.

Now provide me with the scenes for this topic:

Image Prompts:)

Now, since you have provided the scenes, generating images directly from those scenes will not make proper sense. So, I want a detailed **image prompt for each scene**. Please make sure that all image prompts are **highly detailed** and written in **16:9 aspect ratio**.

Video:)

Now I have generated all the images from the above prompts, and all the images are exactly how I want them. Next, I want to convert these images into videos. However, after converting the first image into a video and then the second one, I noticed that when I combine them, there is no smooth transition between the images. For example, in the first image the car is shown, and in the second image a man suddenly appears, which feels abrupt.

So, I want transition prompts. I will use a tool that supports start-image to end-image transition video conversion (like Flow), where I can add the first image and the second image together to create a smooth transition between them. Since you already know all the image prompts, what I need from you is video transition prompts from the 1st image to the 2nd image, then from the 2nd to the 3rd image, and so on, for all the image prompts you provided above, so that the transitions feel smooth and natural.
