ABSTRACT

Provide a concise, self-contained summary of the contribution. A useful structure is: (i) motivation and scientific context; (ii) objective or research question; (iii) methodology, including the principal analytical, numerical and/or experimental methods; (iv) the most important quantitative or qualitative results; and (v) the main conclusion, novelty and relevance. Contributions may address physics-informed and AI-assisted mechanics; digital twins, monitoring and intelligent infrastructure; sustainable materials and circular engineering; AI-driven design and manufacturing; or reliability, resilience and lifecycle performance. Replace this guidance text with your abstract. Keep the complete submission within one A4 page, including any optional figure, acknowledgements and references.

[Optional figure / schematic]
