

VPN

Here is the link to login and download the VPN Netextender client.

<https://199.19.116.149:4433/> (You may need to click show advanced or proceed if using Google Chrome. If using Safari on a Mac, you will need to click Show Details and then visit this website.)

Click on the blue "Here" button, and it will download the client. Once downloaded, open the file, and go through the installation without changing any of the defaults.

Mac users will need to install the SonicWall Mobile Connect app to connect to the VPN.

Now you will need to fill in all the fields for the client to connect.

Server: 199.19.116.149:4433 (make sure to include the :4433)

Username: Your First Name with the first letter Capitalized.

Password: provided by admin

Domain: LocalDomain

You can choose to save the server and domain, so you do not need to enter it every time. The password however is prevented from being saved, so you will have to enter that every time.

Click connect and choose "accept" on the Security prompt.

Once that is done, you are now connected to the Cypress network

Once the client is installed, you will not need to go to the web site anymore since it is only needed to download the client. The client is called SonicWall NetExtender and there will be a new icon on your desktop so you can open it when needed. It will also be down in the lower right-hand corner of the screen by the time. You may need to press the little up arrow button to see it. It will be an upper-case N with a lower-case X placed slightly over it abbreviated for NetExtender. You can right click on it and choose connect to connect to the Cypress network via Secure VPN.

NAS - CYPRESSNAS

Windows Users: Access the NAS drive by opening **file explorer** and typing in the ip address of [\\192.168.168.60](https://192.168.168.60). Enter your username and password to login to the NAS drive.

Mac Users: Click Go, then Connect to Server at the bottom of the list. Enter smb://192.168.168.60, then enter your username and password. Now choose which share you want to access. Once connected, it will open the share you chose. That share will not show up when you click Go, and then Computer.
