

This is the math reflection sheet for your year in math class. This should be filled out prior to your conference with your parents and should guide you in a discussion of how math has been this year, is currently progressing this semester and allow you to come up with a plan and goals to finish the year strong.

The following are the topics that you should discuss with your parent or guardian;

Conference:

"Throughout this year in math class, we have learned about..."

1. Fractions
2. Multiplying and dividing fractions
3. Probability
4. Negative numbers
5. Factoring equations
6. Variables

Within these topics that have been covered in math class,

- Something I found that was easy was using variables.

- Something I found that was interesting was negative numbers.

- Something that was difficult for me was dividing fractions.

What is your current Academic Grade?

87.87%

What types of assignments make up my academic grade?

Quizzes, tests, and homework.

What has Mr Tuke allowed us to use on most quizzes, tests and assessments to help the class remember how to complete the problems?

Quiz reviews that we go over in class.

What do you think your work habit grade should be?

I think my grade should be an A or B because I get most assignments done, and sometimes have to go back to my locker to get my math book.

What does your work habit grade mean and why should you feel that it is important?

My work habits grade is things like if homework was completed and if I bring the right stuff to class everyday. I think it is important because it helps me stay more organized.

Do you have any missing assignments?

Yes

Do you have any late assignments?

Yes

Why do you think we look at this information?

I think we look at this so we can see where I need improvement.

How does homework impact your math *academic* grade?

What we do for homework can be practice for what we do in class.
