

2019-04-09 Dataverse Community Call

Agenda

- Community Questions

Attendees

- Gustavo Durand (IQSS)
- Phil Durbin (IQSS)
- Jim Myers (QDR)
- Paul Boon (DANS)
- Jamie Jamison (UCLA)
- Sherry Lake (UvA - Home of the 2019 NCAA Men's Basketball National Champions) ;-)
- Courtney Mumma (TDL, sad for Texas Tech)

Notes

- Community Questions
 - (Jim) FYI: File previewers available at <https://github.com/QualitativeDataRepository/dataverse-previewers> . As with Data Explorer, you don't have to install these external tools on your own server if you don't want to. You can use the version hosted on GitHub Pages. These tools will be added to the list of external tools in <https://github.com/IQSS/dataverse/issues/5738>
 - (Courtney) Is anyone implementing the distributed digital preservation backend? We're likely to add Chronopolis replication this fall (TDL). How frequently would use it? For us there is a manual process and it passes through Duracloud.
 - (Jim) Once DPN went away, we looked at the cost of Chronopolis and decided to use Google Cloud "cold storage" and we're testing that now. I have some code that does this. We would push on publish. We'll push the earlier versions as well.
 - (Sherry) How is Archivematica related? Scholars Portal is using it. UvA is part of AB trust.
 - (Phil) I believe Scholars Portal has both Dataverse and Archivematica in the same data center. Both are open source.
 - (Gustavo) It might be interesting to see if the Archivematica solution could be moved into the workflow framework Jim added for preservation.
 - (Phil) I'm interested in your favorite features of Dataverse because I'd like to update the "Features" page on the project website. Please reply at <https://groups.google.com/d/msg/dataverse-community/cy6Jc0oZ-wM/1fkwgfaaAgAJ> or <https://github.com/IQSS/dataverse.org/issues/65>
