

## Programs to Install

You will need the applications below for the course

1. Download install and close Firestorm => [Press here](#)

**[IF IT DOSN'T WORK PLEASE PRESS HERE !](#)**

Now close the firestorm program.

2. Download setup kitley => [Press here](#)
  - a. choose your operating system as in the picture

### How to Install Setup Kitley

Please select your operating system:

[Windows](#)

[Macintosh](#)

- b. install and if you get the blue screen press "more info"

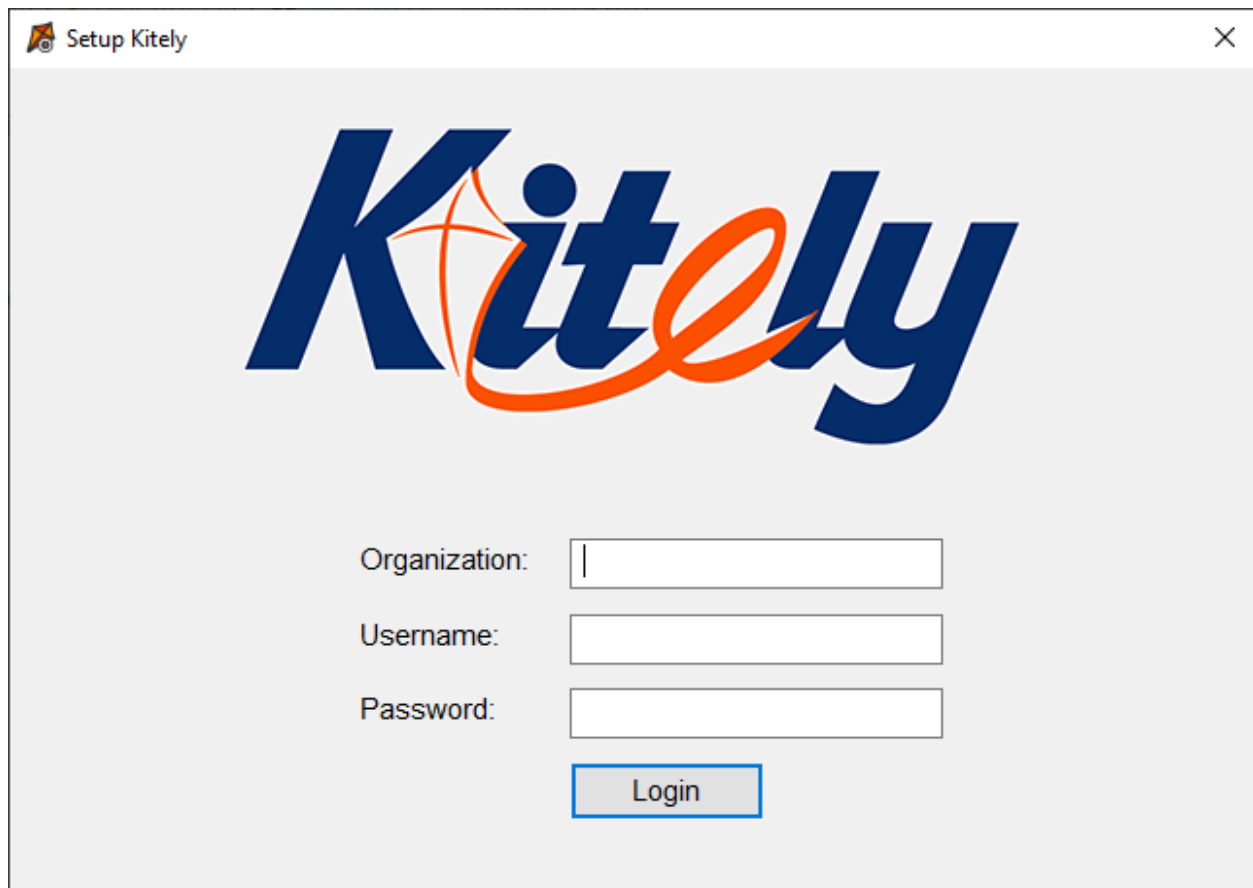

## How to Install Setup Kately

1. Download Setup Kately.
2. Run the program.
3. Your anti-virus program will probably warn you about this program. This warning appears because this is a new program that anti-virus companies have rarely seen. However, the program is **digitally signed**, so you can be certain that it came from us (Kately). If you're using Windows Defender then here's how to bypass the warning:

a) Click **More info**

c. The program will appear in the bottom corner of your screen- click on the program to open

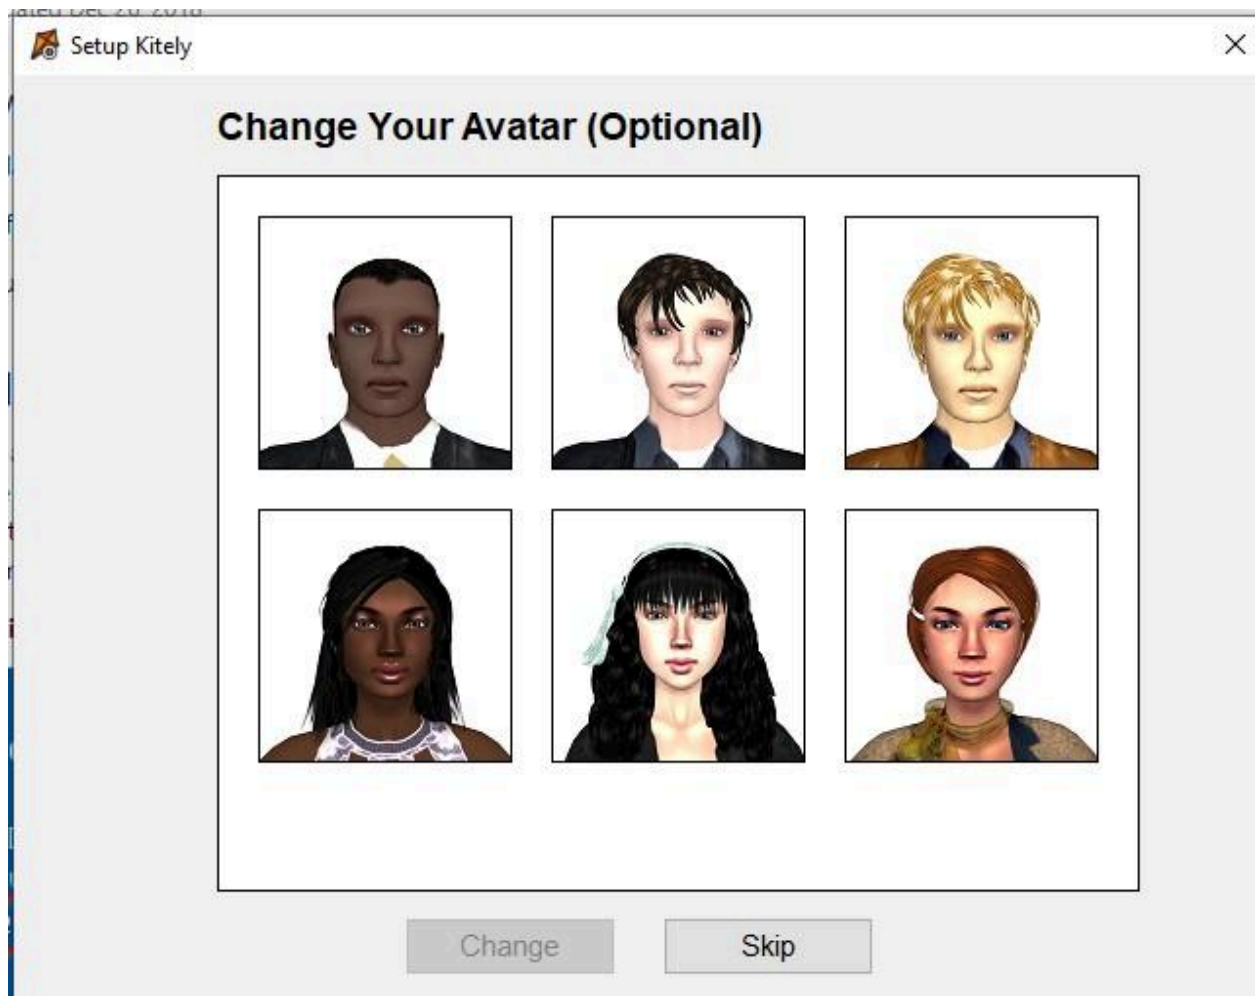

d. the organization name is MOOC

put in your username which is your first name and last name with a space in between

(The password is minimum 8 characters )

e. choose your initial avatar

f. finally "run the program"- the firestorm program will open

## Success

We have configured Firestorm.

Click "Run Firestorm" to run Firestorm and login automatically.

If this doesn't work, then login manually:

1. Run Firestorm yourself
2. In Firestorm, enter your username and password
3. Click "Log In"

Run Firestorm
