With the use of ICT, I am able to share anecdotes. It also can be a tool to spread information, awareness and motivate someone because of the shared story I posted in different social media platforms. Also, it helps other people in decision making when they are in doubt on where they should take a step in the right path. It is such a big help of ICT in sharing brief narrative stories or experience since it will disseminate worldwide. Therefore, there is a wide area of people who can gather something important.

Thank you .

*ICT became one of the things that people nowadays use. It almost became a vital part of everyone's life. It helped a lot in making the people move faster, make us advanced and especially easier to study for students like me. I, myself uses ICT to make change and be a better person so that anyone that will see the things that I do online will inspire them and be a better person as well. I use ICT to become a good student, give awareness to people if needed and do movements that I think that are needed to do in order to have change. Using social media to let people know what to do during this pandemic is one of the example. I have been doing this since before, since I like to share to the public the insights and new finding that I have known that I know that will add value to them and also to add new knowledge to them as well. As the time goes by,the technology only gets better and makes the learning in life of people easier.And i also need to limit myself in using it to avoid getting negative and bad things being posted online.Not only to maintain my mental health but also to not abuse my body using too much of gadgets.ICT is one of the biggest breakthrough that we have ever had and im lucky that to get the experience it.

THANKYOU

ICT is a big help to us, as Senior High School students because it can make us move innovatively, faster and advanced in our lesson with the use of technology in different applications. Also as a student it really helps a lot in my studying, it can make our lives easier to live but some of the users use it in a negative way that can affect their lives. Not all this, but also can affect our health, we can get radiation when we spend too much time facing the monitor or other gadgets. ICT improved pastoral care and behavior management through better tracking of students, it can gain in understanding and analytical skills, including improvements in reading.

~THANK YOU!!!~
GODS SPEED!

Anecdotes of how you used ICT's to be part of social movement, change, or cause to illustrate aspects of digital citizenship.

ICT is a big help to us, as a Senior High School students because it can make us move innovative, faster and advanced in our lesson with the use of technology in different applications. Also as a student it really helps a lot in my studying, it can make our lives easier to live but some of the users, used it in a negative way that can affect the live. Not all this, but also can affect to our health, we can get radiation when we spend to much time, in facing in the monitor or other gadgets. ICT improved pastoral care and behavior management through better tracking of students, it can gain in understanding and analytical skills, including improvements in reading. I have been using ICTs to be part of my social movements, change, purpose to illustrate aspects of digital citizenship by using it in a right manner, In using ICTs to be part of our social movements we should know our limits in using it and we should know the causes and effects when we abuse it. ICT can also change our lives because it will consume our time, it could also affect our relationship with other people in socializing. As a human being we should know our purpose in engaging digital aspects. So, we better know our responsibilities in using it.

THANK YOU and GOD BLESS<3

ICT can **enable disadvantaged individuals and communities to participate in the national and global policy decisions that can change their lives and empower them to take actions that can financially, socially, and politically benefit them.**

On how applying ICT skills makes you better appreciate studying anecdotes. **ICT can help foster more efficient ways of working** being able to use ICT systems effectively. allows employees more time to concentrate on areas of their jobs role that require soft skills.
