

ACCESSING ADOBE FLASH ON A CHROMEBOOK

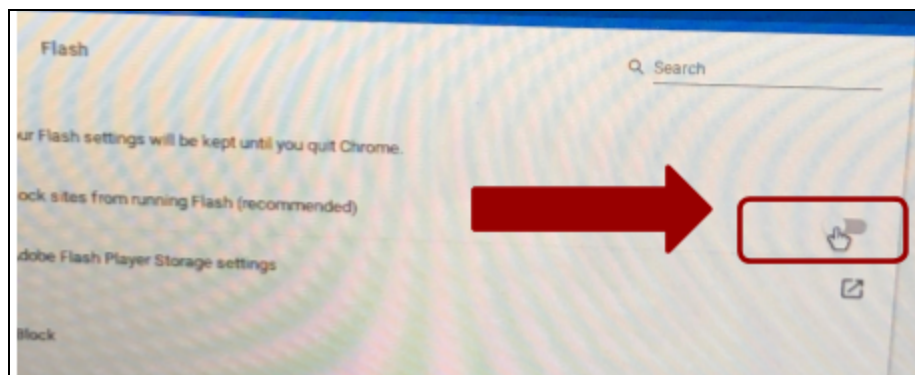

1. Click the puzzle piece icon at the end of the address.

2. Click "Manage."

3. Once you click on "Manage," settings will appear. Find the first phrase, "block sites from running flash (recommended)". The toggle will be gray. Move the toggle to the right so that it is blue (it is like turning on a light).

4. Click out of settings, and click "Get Flash." Everything should load.
