technicalsupport beyondology or well; a horrible attempt to explain the incomprehensible stuff in my brain by technicalsupport95

⚠ full of self deprecation, off-topic ramblings, and also spoilers for future things ⚠

the technicalsupport95 beyondology 🤪

Hi. I'm technicalsupport95, and I don't know how to start this.

I have a silly thing in my head that's been there for a while; the beyondology, or cosmology for Everything Beyond & Below, a stupid canon I've been making for the past couple years. This document is more or so just for me to try to explain everything in a way, explain why for some of these, and/or at least make it somewhat comprehensible. There's going to be little to no science, and a whole lot of bullshit. Because I'm stupid and don't know what I'm doing.

Anyhow, let's actually get to the damn thing.

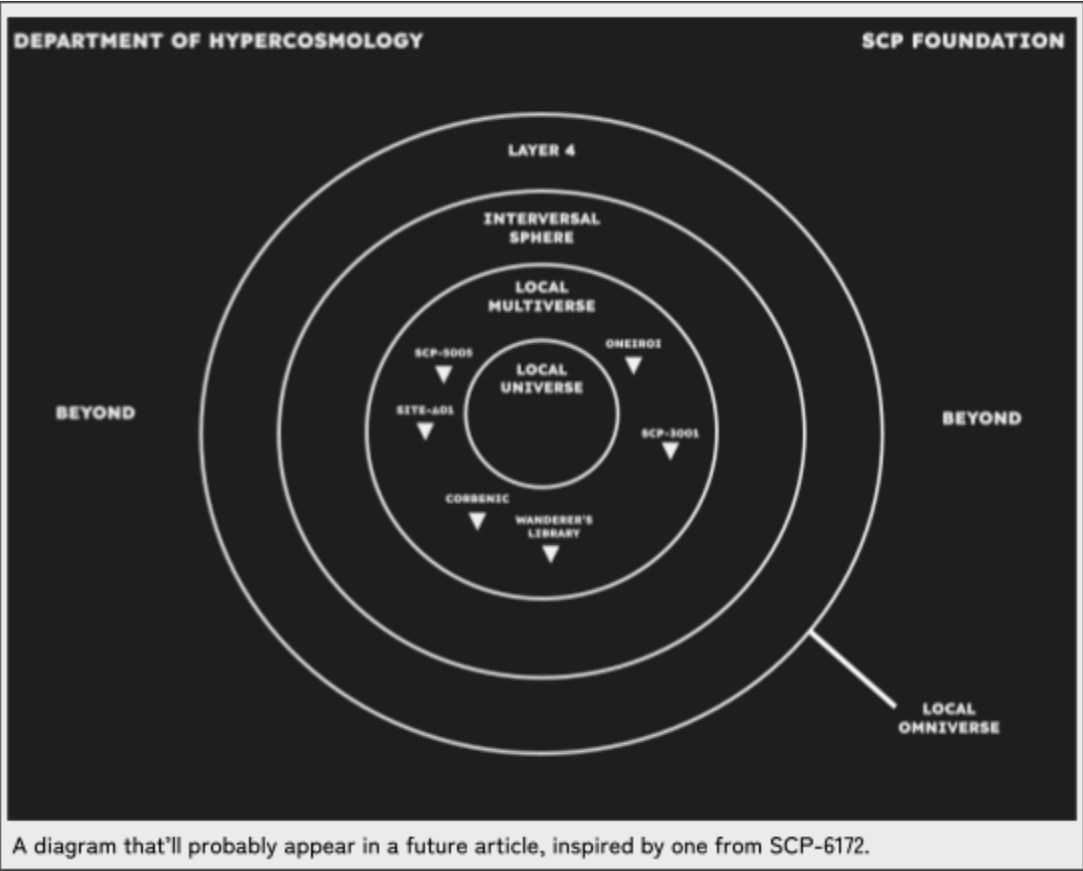

1. HYPERCOSMOLOGY

Hypercosmology, the whole thing that started this. For me, I consider Hypercosmology to be more focused on things beyond a multiverse. Mainly after a multiverse (at least for my interpretation) is an Interversal Sphere. Well, an average cosmological layer tends to be spherical. Not always, but most of the time it is. After that, you could have stuff like a kiloverse, hyperverse, or some other random shit. (weird names, i know!)

However you'd want to describe them, I'd prefer to just go by numbered layers. So a universe would be a Layer 1 verse, a multiverse being a Layer 2 verse, etc. This would be for things beyond an Interversal Sphere. Because yeah, the names can get ridiculous. I may still use the names cause it's somewhat fun, but layer numbers help a bit more at least for me.

It does go both ways. So yes, there's also negative layers. Smaller and shit, how fun.

One way things could be depicted is the diagram below. Yes, it's for something in the future.

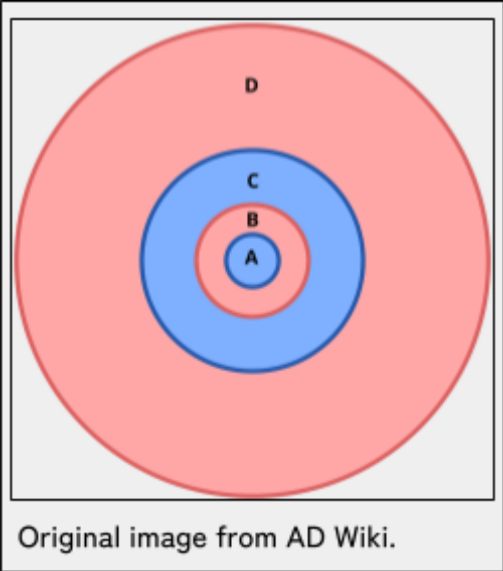

There’s many ways for something to be well; something. Let’s just use a universe as an example for this. You can have organic universes, ones that lead directly into a Layer 4(O) verse (Kiloverse). And it’s more “real” in a way. Then you could also have a simulated universe, at some point leading to a Layer 4(S) verse (Metaverse). Is the name even more ridiculous because it sounds like a certain company? Probably. But yea, it could be less “real” as well.

They could even overlap. As the next layer after both a 4(O) and 4(S) lead into a Layer 5 verse (Megaverse). This is one of the main things in Hypercosmology. Containment and Hierarchy. More about hypercosmology will appear throughout this article, because shit comes up in my mind whenever.

1.5. CONTAINMENT & HIERARCHY

Hierarchy is one of the primary things within both Hypercosmology and Beyondology. As it gives layers for what’s above and what’s below something. Mostly for cosmological things. The basics that one is probably familiar with is a multiverse containing a bunch of universes. Simple stuff, right? Pretty much, but because it's fun;

containment can work in different ways. Here’s my dumbass explanation with concepts borrowed from the [All Dimensions wiki](#)! (Literally half the things will be from there.)

Containment Type A: The most important one, the only one that matters. Basically the main type of containment I refer to for a layer above another. Layers with this type of containment tend to have a (beyond) infinite amount of the layer below it. (i.e: a multiverse containing an infinite amount of universes within).

Sometimes the amount can vary, because sometimes it could just be one thing. An infinite amount, beyond that, etc. You get the idea.

Containment Type B: The loosest form of containment within. Sometimes there could be layers with lower ones barely sticking to them. Such as a multiverse being almost outside of an interval sphere.

Containment Type C: Containing some lower layers, but some are outside of it. Despite that, the lower layers tend to stick close to its higher layer, rather than split off entirely into the hypercosmic space beyond.

Containment Type D: Being barely contained or entirely uncontained. A layer with Type D tends to have a significant amount of cosmological influence outside of it. Chances are there's barely any "visible" layer at that point.

Random useless rambling. Time to move onto the next part with more of that!

2. CREATION (woah!)

Creation's a fun subject when it comes to hypercosmology and beyondology. It's also a pretty hard one to explain, so I'll just start from a universe and work from that.

The smallest decision also leads to a massive effect. It's always happening, every fuckin' planck time or whatever the smallest unit of time could be. Say a single grain of sand moves ever so slightly. There's going to be an infinite amount of things that happen. All those create infinite amounts of their own things. Then beyond the multiverse, you got infinite amounts more of those layers. And it just keeps on going.

Could it actually work like that? Who knows. That's how my dumb brain sees it!

All that can come from the smallest things. The other thing that comes from that? Copies.

An infinite amount of copies of the original thing as well. Both acting as a stillframe of the thing. And also spawning its own chain of creation. SO for just one singular insignificant event, there's an infinitely replicating chain of creation applying through every single layer beyond and below. (holy shit name drop)!!

Creation does come in many forms, this just tends to be how I envision it. No matter how big or small, an infinite amount of layers undergoes mass creation constantly. With bigger events, they could possibly go through it in an even higher amount. This can apply to every single version of the outcome. From the most likely, to the most illogical things that wouldn't even be possible. Because somehow it just happens.

Even if outside of a universe (say a multiverse). It still applies, a choice you make or don't make just continues the creation process. Literally existing is just enough for that (or not existing, who knows? ^_(ツ)_/^\) Now it just happens for that layer. Whole lot of multiverses or whatever.

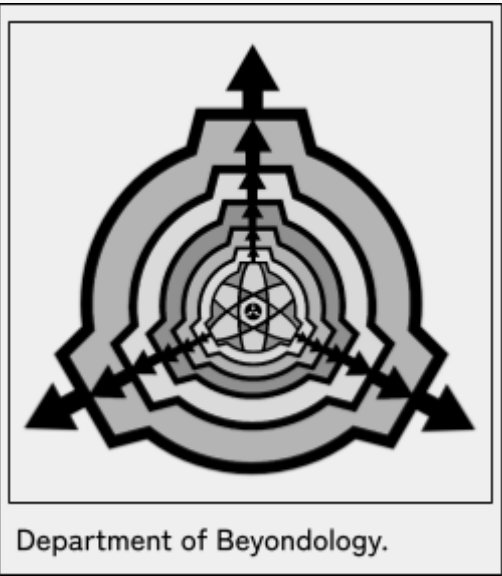

It's probably barely noticeable though. Another form of creation could just be through thought. In a way. While that itself may vary (narrative layers or whatever). Thinking, or not thinking whatever it is. The conscious just by being conscious continues to create. Through thought, actions, etc. You have multiple ways to go about it.

The main constant really is just that; (beyond) creation is eternal. :)

3. BEYONDOLOGY ITSELF

The Beyondology; the main thing for me. Pretty much the main idea is just that there's always something else "beyond" something. Whether it's something higher, bigger, etc. There's always some kind of higher layer. (Even when there probably shouldn't be).

Another core part of Beyondology is the absence of any "limit" really. There's no end all be all; **cosmically**, numerically, etc. It just keeps on going eternally. Does it sound unhinged? I mean if this whole thing didn't earlier, I hope it does now. Why is it like that? Mostly because I think limits / endpoints are FUCKING LAME !!!!

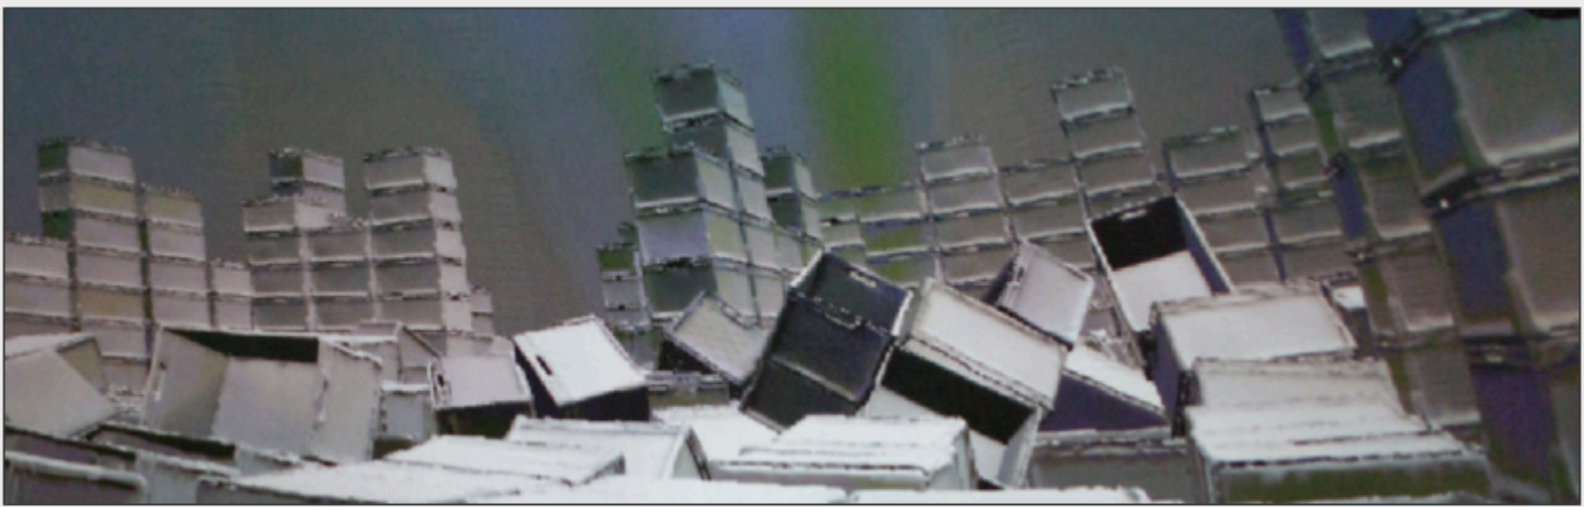

Having a limit would probably be impossible in a beyondological sense, since even if one is established; boom; something surpasses it. There isn't a force that could halt or truly stop anything regarding that shit. It just keeps going, surpassing stuff. From both sides, high and low. Just like life, the whole thing keeps on going forever.

"Beyond" could potentially apply to many things. It just depends on how stupid or fun it could get. Because if it exists, something could surpass it, or be it on a greater scale. Just showing how there's no "true" limit, just checkpoints for what's discovered so far. Maybe. ;)

4. PERCEPTION AND SHIT

Okay to be completely honest I don't have too much to say here but I'll try to have something. I'd just like to bring up both the Department of **Deletions** and Creations, or well how they see reality.

There's a contrast between the two departments. I imagine Deletions sees things through a more computer-esque lens. Having reality be more "simulated" in a way. Sometimes it's true, sometimes it isn't. But most of the time, it's how they perceive reality. Now I may be wrong because I'm not the one who wrote deletions, and I hope I don't die for that. But it's sorta how I see it and stuff.

SCP-9101, showcasing a bit of the “simulated” view from Creations.

Creations sees things through a somewhat more organic lens. There could be some versions of Creations that see it fully organic. But there tends to be a little bit of a **simulated element** in how they perceive reality. Soon I’ll actually elaborate on the more organic and natural perspective of Creations. While Deletions has the Dataspace, Creations has the Forest (not very creative i know :c)

5. RAMBLING ABOUT HYPOTHETICALS

A more short and silly one. It’s more of like, the random ideas I had in my head for a bit.

Considering how I change my mind on things various times (this will be relevant later), I wonder how other versions of me that don’t change or change it even more are like. Like I wonder what their interpretations of the beyondology could be, what it could contain. There’s probably a lot more that actually have stuff figured out. Me? I don’t know, I’m just writing this to share my dumb thoughts for the fun of it.

But who knows, other people could have their own interpretations. Things could be essentially identical, or completely different. There’s always gonna be stuff like that, different models, different ways as to how their own cosmology could work. Sometimes they could be connected, sometimes they’re more separate. I dunno, but it’s part of the fun. For all we know there could be some reality (or multiple!) where the whole thing is considered to be real in some way.

Maybe there’s other places or realities that have it significantly figured out. There could be ones where the systems are actually in place. Hell, one major idea I had was the possibility of them actually having higher numbering systems, ones that go beyond infinity. Infinite possibilities right?

5.5. NUMBERING SYSTEMS; OR SOMETHING

Now the part that actually matters in this section. (Also short because I’m horrible at making things long)

The fascination with there being numbers higher than infinity came back in 2022 or so. I think. Mostly because of **this video**, made me super interested in shit actually beyond infinity, and is essentially the catalyst for beyondology in a way. The idea of basically something far beyond infinity is interesting, and I love how it keeps on going. That just basically applies to the idea of beyond creation or whatever.

But yeah, not much about numbering systems other than it always keeps on going. No matter what, the amount of shit created constantly is always growing alongside it. At least from how I see it, I guess. There was probably some reason I'm not getting as to why Infinity is sorta like "the end", and I doubt I'll ever fully get it. But whatever, the idea of "there can't be anything higher than infinity" is lame to me.

6. OTHER PARTS OF THE UNIVERSE

I genuinely forgot to mention other parts of this, or well how they could apply here. Because yea, there's some other parts of reality other than the cosmological (spatial or whatever) side of things. Like **pataphysics**, temporality, etc. I probably should've elaborated more on the astronomical part, I wish I could but unfortunately I had zero ideas. Anyway, I don't know how to drag this out so uhh here's the 2 sections.

6.1. PATAPHYSICS OR WHATEVER, I DON'T KNOW SHIT

The more "narrative" part of the beyondology remains somewhat the same. Other than the fact that there's like an infinite layer of narrative stacks (muahahaha) or whatever. There's an identical system to cosmology / hypercosmology but rather than just spheres inside bigger spheres. It's infinite cylinders within cylinders, and all that. The constant cycle of people writing shit for things to happen within the layer below them keeps going forever.

As I'm typing stuff, that's happening in the layer below me. Possibly, if it's real. I can't confirm if it's actually doing anything. Probably not. (I say to myself in an attempt to sound somewhat sane)

Am I continuously proving I don't know how this stuff works? Absolutely! I'm dumb anyway so fuck it.

6.2. TEMPORALITY OR SMTH, I DON'T KNOW SHIT

As mentioned before, any (and every) area in any time that undergoes the creation process ends up having multiple copies of itself. With the said event infinitely replaying, creating more outcomes constantly. There's even bigger pivots that could do this at an even larger scale. Say, the Impasse (SCP-6500). Now you have an even bigger plane of existence constantly creating shit.

Personally, I'm not super keen on the idea of a "prime" universe / timeline or anything like that. Maybe for simplicity's sake in certain things, but the idea of a true prime universe; no. There never was a prime, and anyone claiming to be such is just lying to themselves.

7. EVERYTHING EXISTS, OR SOMETHING

Technically yeah, everything exists. From the randomass cosmological models and interpretations that may or may not exist, including ones made by other people; to the various ideas laying within my head. All those exist in some way. They may be close, they may be far, but they're somewhere.

7.1. EVERYTHING AND NOTHING IS ABSOLUTE

I just wanted to bring up that my brain does change. It changes various things, and it's likely that some things won't apply in the future. And that's okay. It still exists in a way; that being the other things. Or well, how do I describe it? Basically it still exists as like its own at that point. So there could be a version of the beyondology that's either more or less unhinged (although I don't know too many ways to make it less unhinged).

But for now, this is at least most of the technicalsupport95 beyondology. Or at least the parts where I was able to grab throughout my brain and random docs full of insane notes.

8. WHY AM I LIKE THIS?

Dude i don't fucking know i wish i did

Okay there's like a bit more to it than that.

I've always loved the idea of "beyond", hypercosmology, and going beyond the universe (and multiverse). Because one never felt enough. None of these feel like its enough, there always has to be more. At least for me. That's part of the fun for the whole thing. The idea of endless creation, the reassurance of many other things. I think this is becoming incomprehensible because I'm not understanding myself anymore.

Sorry, the best I could say is that. I just hate limits, the idea of things "ending" at a certain level just never really appealed to me. It always felt; well, limiting. Yeah I think I forgot what else I was going to say. I'm fucking stupid, I guess.

With this I sorta needed something a bit more concise for the beyondology. Something I could link to instead of notes that make me sound fully insane. I hope to think more of stuff, so I could go about this for longer, and more detail, and all that.

It probably didn't help (sorry), but I hope you enjoyed reading the shit that goes on my brain. I hope to do more sometime.
