

Annotated Bibliography

Primary Sources:

- Documentary: "York Daily Record, Tropical Storm Agnes arrived in York this week in 1972, bringing over a foot of rain." Published in 2019
 - This demonstrates a collection of photos from the damage caused by Hurricane Agnes and the flooding. I used this source to describe the type of destruction and how it affected the city and the city's people. This source helped me understand my topic more because it showed me how this affected people's houses and neighborhoods.

- Photography: "Donated photos to the York Daily Record by James Abram"
 - James Abram's photos from after the hurricane. The photos he took were taken around his college campus, they showed cars being misplaced and fallen buildings. I used this source in my project by specifically describing the photos and incorporating it in how much the city had to pay for it. I understood my topic more thanks to this source because the images showed me what exactly happened after the hurricane and how it affected the environment.

- Newspaper: "Leominster Enterprise" Leominster, Massachusetts, Tuesday June 20, 1972 "Hurricane Agnes leaves death path"
 - After the hurricane the countless deaths in the areas around the area the hurricane moved through. Part of the Caribbean and some states from the US had around 130 deaths. The beaches were "wiped off" and full of random

waste. This source can be used to give some important information about how many deaths there were and information about the weather and how it was like.

- Statistical Data: “The Washington Post (The National Weather Service”
Published by Don Lipman 2012
- These photos from the National Weather Service shows numbers for the states Virginia and Maryland. This source explains how much US dollars (during 1972) that cost to pay for all the loss of the cities. This also gives significant information about how strong the wind was and how much rain fell during the storm. I incorporated this source in my project by thinking about how at that time money was actually more valuable than the amount of money today in the United States. This taught me about how much some states that were affected by the hurricane paid to fix everything that happened and to help the people of the state.

Secondary Sources:

- Article: “Cities Under water, Under Siege: Hurricane Agnes” by Yevgeniya Lyudmilov 2010
- Problems people went through during the hurricane and how much they lost. There are some pictures included of broken down houses and there are also examples of how people tried to clean up their neighborhood and helped others. I found this source useful in my project because it can be a way how people communicated with each other for help to clean up the debris.

- Article: "Nazareth College: Lessons in Disaster" Ph.D., is a professor of history and director of the Center for Public History at Nazareth.
- By the end of July of 1972, this article gave information about how the communication went between the states and the national government. The states that lost the most needed help for the citizens living there. I used this source in my project by stating how hard it was for communication and what the people wanted. This taught me more about my topic by me understanding more about how the people that were affected were given help, like for shelter or something along those lines.
