Scalp preparation (clipping & shaving)

Prepare a shaving tray containing:

- Electrical hair clipper
- Razor
- Permanent marking pen
- Measuring tape
- Elastoplast
- Mefix
- Incontinent pads
- +/- Comb & K-Y jelly

1. Place a bucket under the head end of the bed for shaved hair piece

2. Place an incontinent pad underneath the head

3. Surgeon starts to clip hair by electrical razor, then use the razor to shave hair clear if needed

4. Nurses use the Mefix to stick up the retained hair

5. Then surgeon use measuring tape and marking pen to mark the incision site
