

What each section within a part of the video refers to

- **Editable:** Things you can change to your needs.
 - **Plain text:** You don't need to edit these and can use for all kinds of projects
-

Planning Prompt 1: I want to create a premium SaaS product for making invoices called "Simple Invoice". The SaaS website should have a premium, award-winning design inspired by Awwwards-style websites/ the attached file .

For the first step, I only want to create the **homepage** of the SaaS product. The homepage should be visually attractive, interactive and engaging so users immediately understand the product and feel interested in using it.

Please create **3 different homepage screen concepts** based on this design direction. Each concept should have a different visual style and layout, but all three should maintain a premium, modern, and professional SaaS aesthetic.

I want to review these 3 concepts first and choose one design direction. After selecting one, I will move on to the next step and design the rest of the SaaS product.

Planning Prompt 2: create the entire homepage design for each of these.

Planning Prompt 3: Now I want to design the **dashboard for the ()** design **invoice SaaS product**.

Follow the same **design style, colors, typography, spacing, and overall visual direction** as the homepage.

Create a **simple, clean, modern, and premium dashboard** that is easy to understand and use.

Include:

- Sidebar navigation
- Top bar with search, notifications, and profile
- **Create Invoice** button
- Total Revenue
- Paid / Pending / Overdue invoices
- Simple revenue chart
- Recent invoices list

Keep the design minimal and professional. Avoid unnecessary elements or complicated layouts.

For now, create **only the main dashboard screen**. We will design the other pages step by step later.

Planning Prompt 4: Please provide all the images and other UI assets used in the () design and the dashboard.

I need the images in **high resolution and high quality** so they look sharp and professional when used on my website.

Please:

- Export all images and every UI assets used in the design
- Keep the highest possible resolution and quality
- Preserve the original aspect ratio
- Include every image/visual asset used in the design
- Organize the assets clearly
- Put all images and assets into a single **PDF file**
- Make sure the images are ready to use directly on a production website

Planning Prompt 5: Generate a complete 4–6 step build plan for Hostinger AI Builder (formerly Hostinger Horizons) to create a premium invoice SaaS.

I will attach UI designs separately. In every step, tell Hostinger to use the attached UI as the PRIMARY design reference and closely match its layout, typography, colors, spacing, components, and overall style. Avoid generic SaaS design.

The product should feel premium, modern, simple, professional, and Awwwards-inspired.

Core features:

- Sign up / login
- Dashboard
- Clients
- Products / Services
- Create and manage invoices
- Quantity, price, tax, discount
- Automatic subtotal and total calculations
- Save/edit invoices
- Account/settings
- Free and Paid plans

Free plan:

- Maximum monthly 3 invoices
- Limited clients/history
- Basic templates
- Standard branding

Paid plan: 3\$ a month

- Unlimited invoices

- Unlimited clients
- Full history
- Custom branding
- Premium templates
- Advanced features

Public website pages:

Home, Product, Templates, Pricing, Resources.

Get Started

Step 1 must build ONLY the Homepage, but prepare routes/navigation for the other public pages.

The dashboard should include:

Create Invoice, Total Revenue, Paid, Pending, Overdue, Revenue Chart, and Recent Invoices.

Also include the required database structure, authentication, user-specific data access, subscription limits, upgrade flow, and billing.

Generate 4–6 separate copy-paste prompts in the correct build order. Each prompt must:

- Stay under 2,000 characters
- Focus only on that step
- Continue from previous work
- Tell Hostinger not to redesign completed sections
- Avoid unnecessary repetition

Do not build the website yourself. Only provide the final Hostinger AI Builder prompts.

Polishing Prompt 1: Adjust this website for mobile optimization. Center align the text for mobile and I don't want any dead links. Link them to appropriate sections. And once, you update the content fully SEO optimize the entire website.
