

Defining Giftedness

"Giftedness may manifest in one or more domains such as intellectual, creative, artistic, leadership, or in a specific academic field such as language arts, mathematics, or science."

~[National Association for Gifted Children](#)

"Today's emphasis on big data, test scores, and comparisons among groups fails to drill down on what we need to know to make the best decisions for an individual child. Although metric-based scores and norms inform us about the distribution of traditionally measured academic abilities of groups, they do not zero in on individuals' co-cognitive strengths that are so important for decision making about supplementary services."

~Renzulli (2019)

Renzulli (2005) the three-ring concept of giftedness
