

CREATE AN AI IMAGE IN LESS THAN 10 MINUTES WITH THIS STRATEGY

Money loves speed.

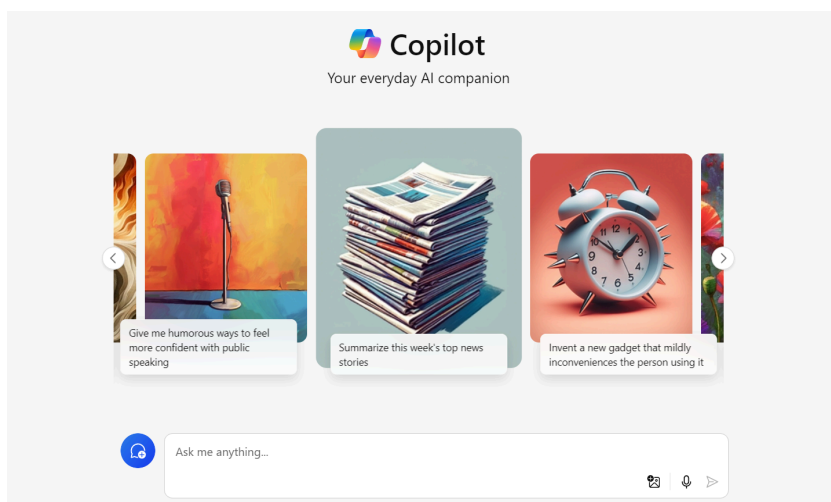

In this lesson, I'll show you a strategy I use to create quick and accurate AI images and prompts (with FREE tools).

1. Pick an image from facebook, ebay, etc.

For the sake of this example, I'll use the image for the previous speed bounty I did

2. The next step, use Bing AI to get access to gpt 4 from [here](#) and enter the following prompt:

You are an expert image analyzer and prompt engineer.

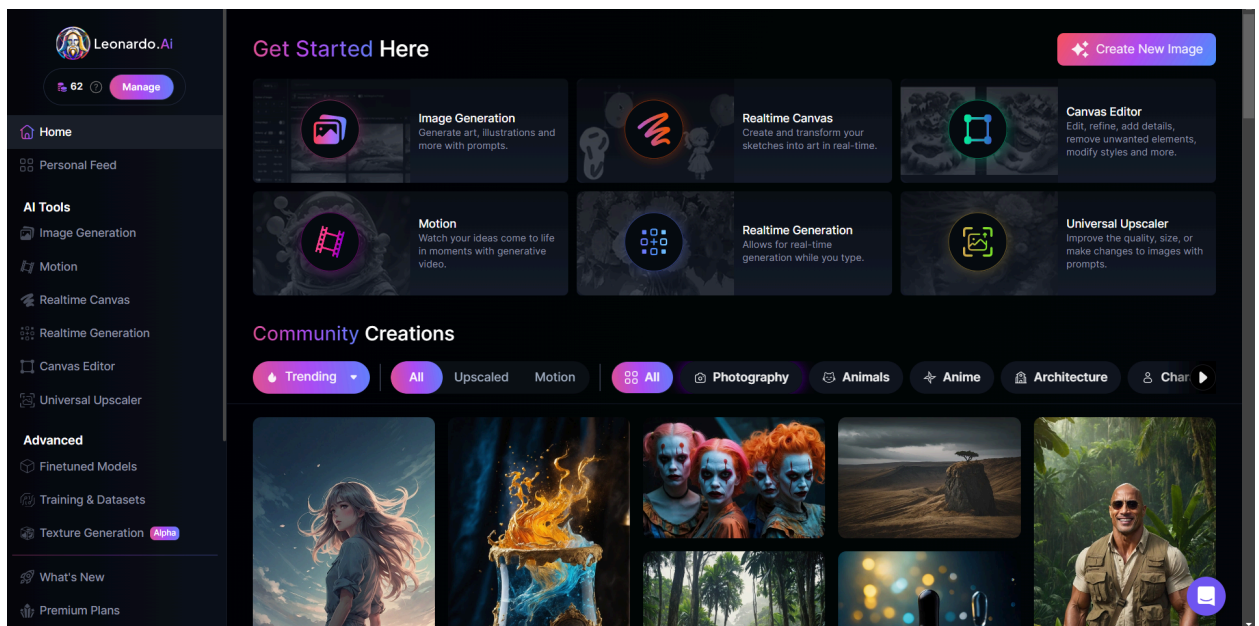

You are tasked with 2 objectives:

1. Analyze the image attached to this message of a [PRODUCT] thoroughly. Go in depth in every single detail of the image.

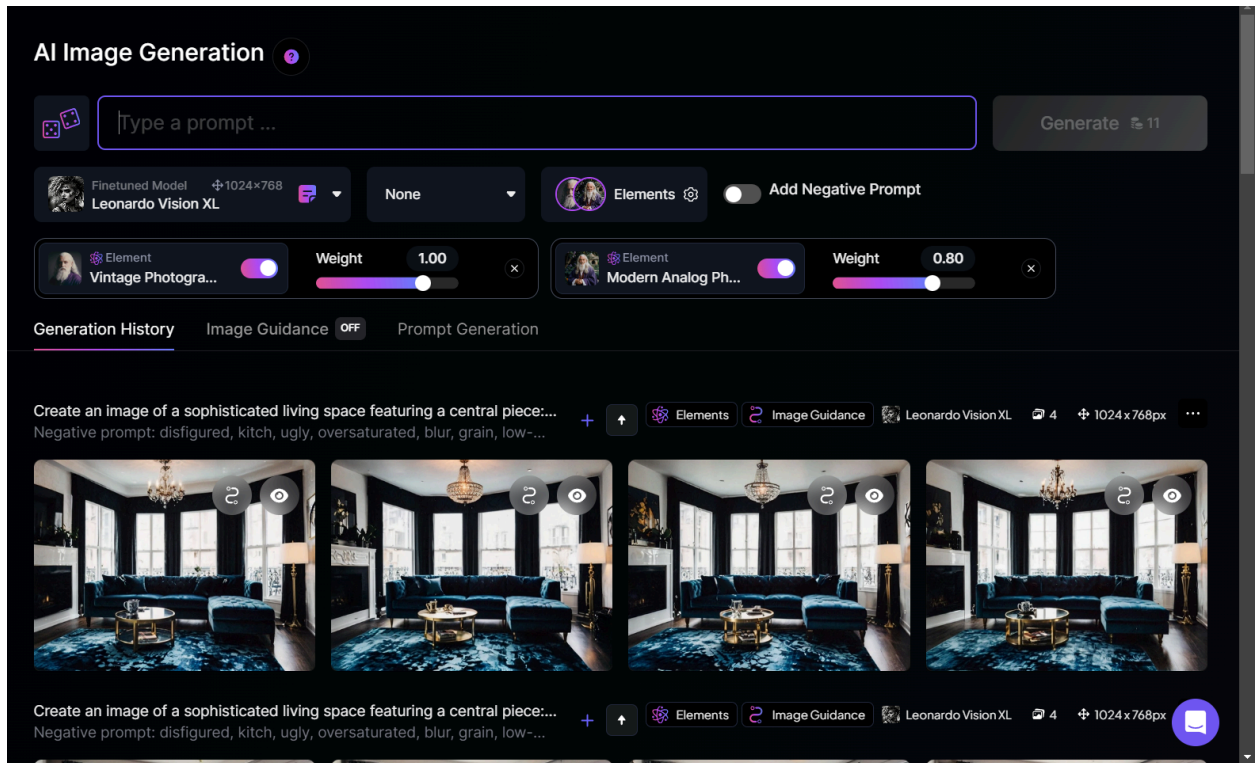

2. Using the analysis you created, I need you to generate an image prompt to use in Leonardo AI. The prompt should depict the nature of the [PRODUCT]. Choose a suitable background and theme for the image of the [PRODUCT] you'll create the prompt for.

P.S. You can improve/iterate this prompt if you placed it in chatgpt and asked it to improve this prompt.

3. Take the generated prompt you have to [Leonardo AI](#), (I use leonardo because it's free, but if you have access to a paid version or MJ, feel free to use that). And go to image generations

You will find the following screen:

Paste the prompt you have there.

4. From there, you can keep iterating based on what your creativity tells you!

P.P.S Use Leonardo Kino XL, and Vintage Photography Loras as a start!

Hope this lesson helps you Gs, BE CREATIVE.
