

ICA (Industrial control & Automation)

We offer our industrial customers the latest, cutting-edge industrial control and automation systems and solutions, contributing to improved productivity, quality and safety.

- Automation & Control
- Motion Control & Drives
- Relay & Interface
- Auxiliary Control devices
- Industrial Detection, Vision, Measure, and Control
- Machine safety
- Pneumatic & Hydraulic devices
- Robotic Products
- Industrial Services (in the areas of trainings, audits, consulting, engineering, asset management and software)

SCADA

- AVEVA Plant SCADA offers superior operational context and built-in functionalities that consolidate, simplify and optimize control. It streamlines your operations for efficiency, reliability and safety.
 - Intuitive configuration tools and powerful engineering features give you control of all your information, even as you add more data sources.
 - Robust visualization helps you see how to optimize operations now—and continues doing so as you change your design, process and operations over time.
-
- Chemicals
 - Oil, GAS and Energy
 - Power and Utilities
 - Infrastructure
 - Marine
 - Mining Metal Minerals
 - Manufacturing
 - Engineering, Procurement and Construction
 - Transportation

Building Automation and Construction

We provide essential smart building solutions for modern projects, including home and building automation, wiring devices, data networks, fire protection, and security.

Our building automation devices enable buildings to become smart, safe, and efficient while wiring devices ensure reliable internal electrical LV systems. We prioritize fire protection and physical security, ensuring comfort and secure environments for occupants and assets together with data networks being indispensable part of secure communication.

- Home & Building Automation
- Data and Comm Networks
- Fire Protection and Security
- Wiring devices and Accessories

Power Distribution

Our comprehensive range covers everything needed for efficient power distribution. From low, medium, to high voltage electrical distribution components, enclosures, and panel assemblies. Additionally, with a focus on organization and efficiency, our cable management solutions ensure that cables are neatly routed and protected, minimizing the risk of damage or downtime.

- PCC and MCC Panel
- BBT (Bus-Bar Trunking System)
- Cable management
- Enclosures and panel assembly
- Electrical distribution (low, medium and high voltage)

Digital Transformation by IOT and AI

Our comprehensive range covers Bus-Bar Trucking System, Panel Deployment for distribution system, Energy Monitoring Solutions by IOT Based, Temperature Monitoring, Vibration Monitoring, Fuel Level Measurement etc.

- Fuel Level Measurement
- Temperature measurement
- Vibration Measurement
- Energy Measurement
- Harmonics Measurement
