

What should we do to protect the environment?

We shouldn't be throwing waste in the oceans especially plastic because one day the plastic will break and fish will eat it and die if another animal eats that fish it will die as well.

We shouldn't cut down rainforests because trees and plants give us O₂ (oxygen) and if we don't have enough air we might die because no one can be alive without air.

In my opinion we shouldn't sell or make plastic stuff because bad people are throwing them in the oceans also we shouldn't have to cut down lots of trees. XSTELIOSX

How to protect our planet?

Our Earth is a beautiful planet with many amazing caves, rainforests and big cliffs. But what we have to do to protect them?

Many people want to stop using plastic like straws or bottles and use things made from other materials like silver or paper. Materials who can recycle.

Also another idea is people who live in big cities must stop using their cars as much as possible. If we can go to our works walking or with public transport like with metro, buses and streetcars. But also we can use the bikes.

In my view our planet is our home where all the people live and finally is our duty to protect Earth for the next generations.

How to protect the planet ?

Our planet the Earth is an amazing place with many rainforests, icebergs, caves, cliffs and many more. But for how long can we see those?

Many people don't care about the environment and they don't protect. Unless these people start to care about the environment, we will see the planet destroyed. In my opinion

we have to stop using plastic and the other materials that are unfriendly for the environment .

In addition to this we should use only electric transports like cars or busses or we can use more the metro that is an electrical public transport.

If everyone does something small all together we can do something very big to help reduce the climate change and protect our really beautiful planet.

George Pilidis Cs4

How to protect the planet

we could protect the environment if we do not throw rubbish in it. Throwing rubbish in the environment is bad for us but also in the environment. We will not be able to breathe and we will die because we must be careful not to buy plastics but also companies not to produce plastic things.

In my opinion we should be good to the environment to live many years.

How to protect the planet :

Our planet is Earth . It has many beautiful places to go someone to seen such as sea , beaches , forests , rainforest ,caves,cliffs and more.

In order to continue to have those places ,we must protect the planet from our garbages. We must use only recycling products. We must think GREEN .

In my opinion we must plant and not cutting trees in order to have a cleaner Earth to live and more oxygen .

If anyone from us doing something small every day, our life will be goodest and the planet will be more clean.

Giota Kotsoula

How to protect the planet?

The earth is the place we were born, the place where we are living . We should protect our planet. The problem is that many people can't understand how important is that. That's why I'm here, I'm gonna give you some ideas!

In my view, the most important is to recycle but correctly. Some people believe that, if something dirty get in the bin the other will become dirty too, that's mean that those can't recycle. Unbelievable isn't it? We should learn to use water and electricity when we need it. Many people brush their teeth and leave the water open or leave from somewhere without switch of the lights.

However, there are few ways to protect the planet but in my opinion those are the most important. I hope I helped you!!!

How to protect our planet:

In our space we have a lot of planets the humans leave in the earth.

Here i can't say that we are very carefully a lot of people just take something to eat because is hungry... but when it finished his/her food is not going to throw the rubbish in the bish and if it throw the rubbish i'm sure that it not gonna put the plastic in the correct place.

1 So the first think is to throw our rubbish in the bish and to the correct place.

2 the other think is to use more carefully our cars, motorbikes ... we have to use the cars for a long ways like to go one trip or to go in one job but if your job is behind your house you have to walk or to take your bike!

That's the most important thing to do if we do that we can have a better planet to leave not only for you but for all of us!!!

Thodoris

How to protect our planet:

We all live in the Earth and we all love earth but a lot of people should understand that they must protect the planet.

Some people use so many plastic and they don't put it in a rubbish or they recycle it the throw it down or in the sea so we can ban plastic from all the countries.

In addition to this, we shouldn't so much our cars or make electric cars to use

If we want to go somewhere that it is close to us go with a bike or walk.

To sum up, in my view, if we all do these things we can make a better place to live.
