Abstract

Abstract The starting point of the present paper is that the New Information Technologies can only contribute substantially to the improvement of schooling, if they are appropriately embedded in powerful learning environments. The realization of this embedding requires that inquiry and development relating to educational computing are

Вывод:

Тема взаимосвязи психологии и информационных технологий высоко актуальна в современном мире. С развитием технологий и их повсеместным использованием, влияние на психическое здоровье и социальные взаимодействия становится все более заметным. Важно исследовать, как

цифровые платформы влияют на наше поведение, эмоциональное состояние и отношения с окружающими. Понимание этих аспектов может помочь разработать более эффективные и безопасные технологии, которые учитывают потребности пользователей.
