EXPERIENCE

LeverX, September 2024 – Present as *Software Engineer*
- Designed and implemented scalable backend services using **SAP CAP (Node.js)** and **SAP BTP (Cloud Foundry, HANA Cloud)**, supporting distributed, large-scale system requirements.
- Conducted **code reviews**, enforced best practices, and contributed to **architecture design** decisions.
- Developed and optimized **data models**, complex queries, and APIs for enterprise reference data management.
- Wrote technical documentation and supported junior team members in onboarding and troubleshooting.
- Deployed applications using **Cloud Foundry**, optimizing deployment strategies and contributing to **DevOps culture**.

E-POS SYSTEMS, September 2023 – September 2024 as *Backend Developer*
- Led backend development of a tax-integrated POS system using **NestJS**, **Node.js**, and **TypeScript, Prisma, PostgreSQL**.
- Designed and delivered high-performance modules for payment processing, sales analysis, and accounting.
- Implemented robust third-party integrations and **RabbitMQ-based messaging**, ensuring system scalability and resilience.

Tridmo, April 2022 – July 2023 as *Software Engineer*
- Engineered high-performance and scalable backend solutions utilizing Node.js, Express.js, and Typescript. The result: an optimized system that delivers a seamless and responsive user experience.
- Implemented advanced optimization techniques, including caching and query optimization, to elevate system efficiency. This strategic approach not only improved response times but also significantly heightened user satisfaction.
- Employed Prisma as the ORM tool, simplifying database interactions for efficient data management. This integration seamlessly enhanced the overall functionality of the application.

Dizipro, October 2021 – April 2022 as *Backend Engineer*
- Built RESTful APIs and microservices with **NestJS**, integrating with multiple frontend and mobile platforms.
- Collaborated closely with mobile and frontend engineers to design and implement robust REST API contracts, ensuring seamless integration and smooth user experience.
- Utilized Sequelize ORM and Node.js to enable incremental and reversible management of the database schema, ensuring seamless updates and scalability.

TheHotelUs, May 2022 – September 2022 as *Backend developer*
- Developed hotel management modules with **Node.js** and **MongoDB/Mongoose**, including booking, billing, and room allocation.
- Implemented seamless integration of the application with various third-party services, enhancing functionality and providing a streamlined experience for users.
- Actively participated in project team meetings, collaborating effectively with team members to ensure smooth communication, alignment, and timely delivery of project milestones.

CERTIFICATIONS
AWS Certified Cloud Practitioner

EDUCATION
Najot Talim Academy in Tashkent | Full-stack development

SAP & Cloud Expertise: SAP CAP (Node.js), SAP BTP, SAP HANA Cloud, Cloud Foundry, DevOps practices, Microservice Architecture, Agile (Scrum, Kanban)

LANGUAGES & TECHNOLOGIES
- Proficient: JavaScript, Node.js, PostgreSQL, MySQL, TypeScript, NestJS, MongoDB, Git, Serverless framework, AWS, React.js, Docker, Redis, RabbitMQ, CI/CD, TypeORM, Prisma
