

## How global warming is causing more cases of mosquito-borne diseases Video Worksheet

How has the pattern of ticks changed over time? Why has this happened?
What are 3 diseases mosquitoes are known to carry that affect humans?
How does climate change affect the risk of these insect-borne diseases?
The doctor's main advice is that governments should start to think about the risks of new insect-borne diseases now rather than when they have become a large problem. What is one proactive decision the government in Canada could make to prepare for the future risk of new diseases from insects?
