Abstract - This document is the article writing format for Jurnal Pepadun. Authors must follow all instructions in this document to be published in Jurnal Pepadun. Abstract is a summary of the article. The abstract contains a summary of the introduction, a summary of the methods, a summary of the results and discussion, and a summary of the conclusions. The number of words in the abstract ranges from 200 - 300 words. The abstract is written in **English** using *font size 10pt spacing single before 12pt after 12pt italic style*. Keywords are scientific terms that are often encountered in the field of science related to the article, and can be used as a search key to find articles. Use 3-5 words or phrases that are key to the submitted article. **You should not use symbols, mathematical equations in the title and abstract.*

Keywords: keywords are written alphabetically with a maximum of 5 words; separated by semi colon signs. (*font size 10pt, single spacing before 12pt after 12pt*)

1. INTRODUCTION (*font size 12pt, single spacing before 24pt after 12pt*)

Articles should be submitted to Jurnal Pepadun in MS Word format (.doc/.docx), not pdf or other formats. The minimum number of citations is 30 citations with 80% of the citations in the form of scientific journals published in the last 10 years. All content is written using *font size 11pt spacing single before 12pt after 12pt*. Please note that the submitted manuscript is a recent manuscript and not published in journals or other digital media.

The title of the article should be short and clear. The title should first state the main idea of the article and then be followed by other explanations. The title of the article should pinpoint the problem to be addressed. The article should contain at least **an introduction, research methodology, results and discussion, and conclusion**. The introduction outlines the issues raised in the research. The introduction can contain reasons why the topic being researched and written about is considered important and issues related to the topic being researched. Literature reviews related to previous research results can be written in the Introduction section.

2. RESEARCH METHODOLOGY

The method contains a description of how to carry out the research. It describes how to obtain data, the algorithm or formula used in the research or how to process the data, and how to evaluate/assess the research results. Common methods do not need to be written in detail, but simply refer to the reference book. Research procedures should be written in the form of news sentences, not command sentences.

2.1. Page Style (*font size 11pt, single spacing before 12pt after 6pt*)

The easiest way to fulfill the formatting requirements is to use this document as a *template*. Author can directly write on this *template* file. The minimum article page length is 8 pages and the maximum is 15 pages, including all figures, tables, nomenclature, references, and others. Articles are written in A4 paper format with a right-left-bottom border of 2 cm and an upper border of 3.25 cm. The article format uses 1 column.

3. RESULTS AND DISCUSSION

Research results in the form of data or numbers are presented in tables or graphs. If the research is carried out application/software development, some important *screenshots* can be presented. Each table, graph or figure must be referred to in the text/paragraph.

The discussion section provides *insights* into the data obtained in the research. This section can present tables or graphs that are the result of data processing (not just raw data). The author is required to explain the findings obtained in the research accompanied by clear evidence. This section can contain reviews that compare the results obtained in this study with the results obtained in previous studies.

3.1. Writing Format

Paragraphs should be organized and consistent. Pay attention to the spelling and formatting of foreign terms. All paragraphs must be right-aligned and left-aligned. The entire document should be written in Times New Roman font with *single* spacing. Other fonts may be used if there is a specific purpose. The title consists of a maximum of 10 words.

3.2. Author

Authors should not indicate the name of their position (e.g. Supervisor), academic degree (e.g. Dr) or membership of any professional organization (e.g. Senior Member IEEE). To avoid confusion, the last name of each *author* should be written at the end, not abbreviated and marked with a comma (e.g. Rizky Prabowo becomes Prabowo, Rizky). Each affiliation must include, at a minimum, the name of the company and the name of the author's country of residence (e.g. University of Lampung, Indonesia). An email address is required for the corresponding author.

3.3. Math Formulation

Equations must be written using the latest version of Ms Equation Editor (found in the latest version of Ms Word) or using the Mathtype application. Writing symbol descriptions in equations is made in descriptive paragraphs, not list items as in book writing. Equations must be typed with an indent of 1.27 pt and numbered sequentially starting with the number (1) on the right. *Author* can use *ref_rumus style* for formula writing rules.

$$x^2 + y^2 = z^2 \quad (1)$$

3.4. Table and Figure/Graphic Writing

All figures and tables must be centered and numbered consecutively. All text within figures and tables must be clearly legible, no *blurring*. Each figure and table must be referred to in the text, the way of referring should not use location (e.g. below, above, following, etc.). Writing tables, figures, graphs, and equations must have high resolution (min 300 dpi). Avoid cropping images or *screenshots* for writing tables and equations.

Images and graphics should be placed in a *text box* and the image caption written below the *text box*. The *text box* does not need to be *bordered*. To remove the border on this *text box*, please click the Format tab, and in *Text Box Style* click the "Shape Outline" icon then select "No Outline".

Figure 1. Unila logo (*font size 10pt, spacing before 6pt after 10pt*)

The *author* can use the *image style* for image writing rules while for table writing, the *author* can use the *Table style*. Tables are made with horizontal lines without using vertical lines. Tables must not be cut off on other pages.

Table 1. Summary of physical parameters (*font size 10pt, spacing before 10pt after 6pt*)

No.	Segments	Length (km)	Elevation (meters)
1	A-B	25	30
2	B-C	75.15	10
3	C-D	44.75	50
4	D-E	72.5	10
5	E-F	21.25	10

3.5. Bibliography Writing

References in the text must be cited by writing the author's last name and its sequence number in the reference. The citation style used in Jurnal Pepadun is IEEE [1]. Bibliography writing also uses IEEE style. Citations are sorted by their appearance in the text and use Arabic numerals in square brackets [2]. It is highly recommended to use citation management applications such as Mendeley or Reference Manager when writing articles [3]-[5] so that citation management becomes easy. Writing a list of references using single *spacing* using *font size 11pt, spacing before 0 after 6pt*.

4. CONCLUSIONS

The Conclusion section summarizes the reviews written in the Results and Discussion sections. The Conclusion section is written in paragraph form, no need to use numbers. The paper will not be reformatted, so please stick to the instructions given above. Otherwise, it will be returned to the *author*. Please upload your article in .doc/.docx form on the Jurnal Pepadun website (<https://pepadun.fmipa.unila.ac.id>). Articles sent via e-mail will not be processed.

NOMENCATURES (If Required)

Nomenclature is written in alphabetical order. The format is Roman letters followed by Greek symbols, which are then followed by subscripts and superscripts.

A	=	Amplitude
C_d	=	drag coefficient
f_e	=	linearization coefficient
K_i	=	modification factor

ACKNOWLEDGMENTS

If necessary, acknowledgments can be made here. Acknowledgments should be directed to research funders or experts who provided significant assistance in the completion of the research.

LITERATURE

(The minimum number of references is 30 articles, with 80 percent of them coming from reputable journals and from the last 10 years. The IEEE reference formatting style is used. We highly recommend using Mendeley or other similar tools)
