

How did you link PicoH to the Near Space Launch material?

Ohbot Voice: 'Any idea how cold it will be at 30,000 meters'

Our children are already familiar with Ohbot. We have had one previously in school. So our children were able to draw that link between Ohbot and PicoH, which served really well at the start of the project. So we used the Near Space Launch video as a hook for our children. It's something we do very well in literacy. To grab the children's attention and really immerse them into their learning. At they were very keen to replicate what LGfL have done which was problematic, been able to source a Weather balloon yet

It got them involved in a project and got them to really start to see the possibilities of using over at in that case. But the PicoH robot. The children became incredibly interested in coding opportunities at Ohbot, for example, the sensing options and why OhBot was saying things at different altitudes. They were just very keen to understand more about the detail in the coding and the journey of Ohbot through space.
