

Division without Remainders 4th grade and up

Remove the face cards (Jack, Queen, King)

Place the cards face down in a pile.

To Play:

Player 1 draws 2 cards from the pile. Ex:

$$10 \div 2 = 5$$

Player 1 can keep these cards because you can divide them evenly, without a remainder.

Player 2 draws 2 cards from the pile. Ex:

9 can not be divided evenly by 8, so these cards must be put into a discard pile.

Play continues until you have gone through all the cards in the pile. If you want to continue playing, shuffle the cards in the discard pile, place them face down and begin again.

The person with the most cards at the end of the game wins.
