Table of Contents

1. [Table Of Contents](#)
2. [Documentation](#)
 - Documentation of the core components that make up 'Chess In VR'.
 - 2.a. [Documentation: ChessEngine \(Google Drive\)](#) - The underlying chess engine.
 - 2.b. [Documentation: Physics Hand \(Google Drive\)](#) - The physics based hands.
 - 2.c. [Documentation: Grab System \(Google Drive\)](#) - The grabbing/throwing logic module.
 - 2.d. [Documentation: Adaptive Hands \(Google Drive\)](#) - The hand/finger animation module.
3. [API References](#)
 - Useful documentation for coders.
 - 3.a. [API Reference: ChessEngine \(Google Drive\)](#) - The underlying chess engine.
 - 3.b. [API Reference: ChessEngine.AI \(Google Drive\)](#) - The chess AI module.
 - 3.c. [API Reference: Physics Hand \(Google Drive\)](#) - The physics based hands.
 - 3.d. [API Reference: Grab System \(Google Drive\)](#) - The grabbing/throwing logic module.
 - 3.e. [API Reference: Adaptive Hands \(Google Drive\)](#) - The hand/finger animation module.
4. [Getting Started](#)
 - Simply import the package and you are ready to go!
 - 4.a. [Importing the Asset](#)
 - 4.b. [Setting Up VR In Your Project](#)
 - 4.b.i. [Setting Up XR Plugin Management & OpenXR](#)
 - 4.b.ii. [Import The New 'Input System'](#)
5. [Game Management Components](#)
 - Game management components specific to 'Chess In VR'.
 - 5.a. [The PieceGrababilityManager Component](#)
 - A component that controls the 'grabbability' of chess pieces based on the current game state.
6. [Chess Player Components](#)
 - Component(s) responsible for calibrating the player's position.
 - 6.a. [Chess Player Calibration Components](#)
 - 6.a.i. [The ChessPlayerCalibrator Component](#)
 - Calibrates the chess player's position.
 - 6.a.ii. [The NetworkChessPlayerCalibrator Component](#)
 - Calibrates the local chess player's position.

7. [Chess Hand Components](#)

- Component(s) that attach to the player's hand(s).

7.a. [The ChessGrabber Component](#)

- A component that manages grabbing of chess pieces.

8. [Chess Table Tile Components](#)

- Component(s) that attach to chess table tiles.

8.a. [The ChessTilePieceTrigger Component](#)

- A component that detects when a chess piece is being placed on a tile.

9. [FAQ](#)

Documentation

2.a. Documentation: ChessEngine

- The documentation for the Chess Engine.
- [Google Drive: ChessEngine Documentation](#)

2.b. Documentation: Physics Hand

- The documentation for the Physics Hand.
- [Google Drive: Physics Hand Documentation](#)

2.d. Documentation: Grab System

- The documentation for the Grab System.
- [Google Drive: Grab System Documentation](#)

2.e. Documentation: Adaptive Hands

- The documentation for Adaptive Hands.
- [Google Drive: Adaptive Hands Documentation](#)

API References

3.a. API Reference: ChessEngine

- The scripting reference for the Chess Engine
- Responsible for the underlying chess game simulation.
- [Google Drive: ChessEngine API Reference](#)

3.b. API Reference: ChessEngine.AI

- The scripting reference for the Chess Engine AI.
- Responsible for chess AI.
- [Google Drive: ChessEngine.AI API Reference](#)

3.c. API Reference: Physics Hand

- The scripting reference for the Physics Hand.
- Responsible for the physics based hands.
- [Google Drive: Physics Hand API Reference](#)

3.d. API Reference: Grab System

- The scripting reference for the Grab System.
- Responsible for grabbing & throwing interactions.
- [Google Drive: Grab System API Reference](#)

3.e. API Reference: Adaptive Hands

- The scripting reference for Adaptive Hands.
- Responsible for animating the hands and fingers.
- [Google Drive: Adaptive Hands API Reference](#)

Getting Started

4.a. Importing the Asset

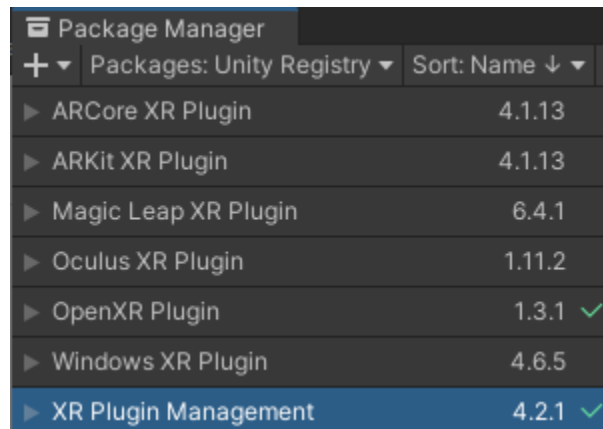

There are 2 ways to import the 'Chess In VR' package.

- a. (Recommended) Using the Unity Editor 'Package Manager'.
 - i. Open the Windows→Package Manager using the Unity editor toolbar.
 - ii. In the upper-left corner of the Package Manager window select 'Packages: My Assets'.
 - iii. Search for 'Chess In VR' in the list or use the search bar in the window.
 - iv. Select the asset in the package manager, select 'Download'.
 - v. After the package has finished downloading click 'Import' to import it into the project.
- b. Importing ChessInVR.unitypackage
 - i. Using the Unity Editor's toolbar select Assets→Import Package
 - ii. In the file explorer that opens navigate to ChessInVR.unitypackage
 - iii. Double click the package and import it.

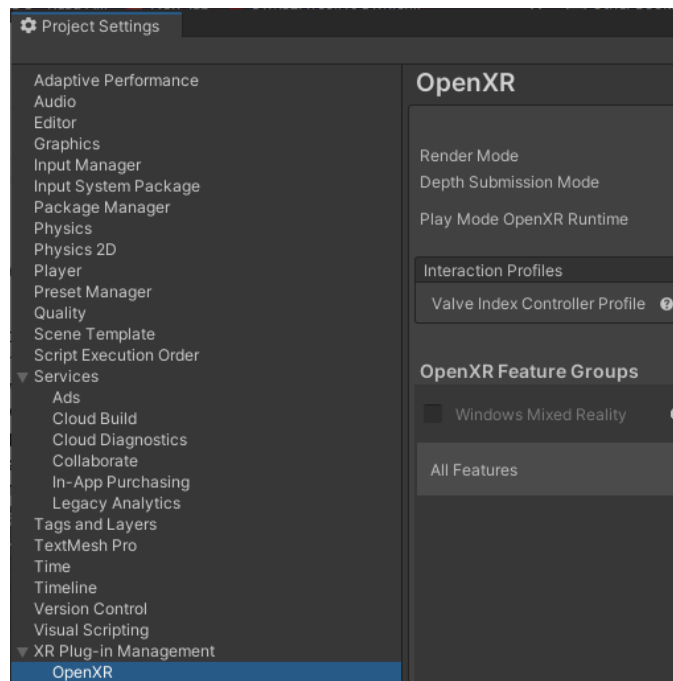

4.b. Setting Up VR In Your Project

4.b.i. Setting Up XR Plugin Management & OpenXR

- You may skip this step if VR is already configured in your project.
- Start a new (or open an existing) Unity VR project.
 - You can start a VR project using the 'New Project' feature in the Unity Hub.
 - You can **upgrade an existing non-VR project** by opening the 'Package Manager' window and installing the '**XR Plugin Management**' package from the 'Unity Registry'.
 - Install another package such as OpenXR (recommended), SteamVR, or similar.

- The last step to setting up 'XR Plugin Management' is to configure your chosen XR plugin – in the case of the screenshot below the 'OpenXR Plugin' was used.

- More detailed steps can be found on google regarding setting up VR in an existing Unity project.

4.b.ii. Import The New 'Input System'

- If you want to use the provided demo content make sure your project has the **new unity input system** enabled (*it may be enabled by default in newer versions of Unity*) so make sure you have the '**Input System**' package installed in your project if you want to use the provided demo content.
- Simply navigate to 'Windows → Package Manager' and import the 'Input System' package from the 'Unity Registry'.

***You are now done 'getting started'.
Check out any of the demo scenes or start making your game!***

Game Management Components

Components that attach to the chess game manager.

5.a. The PieceGrababilityManager Component

- A component that is responsible for managing the 'grabEnabled' state of [GrabbableObjects](#) that also contain [VisualChessPiece](#) components.
- This component should be attached to the same [GameObject](#) as the [ChessGameManager](#) component.

Chess Player Components

Components that attach to the player.

6.a. Chess Player Calibration Components

6.a.i The ChessPlayerCalibrator Component

- Calibrates the chess player's position.
- Used in local play or versus AI games to calibrate the position for the local player to:
 - The current turn's team reference if neither player, or both players are AI.
 - The non-AI team's reference if only a single player is AI.

6.a.ii The NetworkChessPlayerCalibrator Component

- Calibrates the local chess player's position.
- Used in networked games to calibrate the position for the local player relative to the reference set for the local player's team.

Chess Hand Components

Components that attach to the player's VR hands.

7.a. The ChessGrabber Component

- A component that is attached to the same `GameObject` as the hand's `Grabber (RayGrabber)` that manages grab-ability and forced releasing of `VisualChessPieces` that also contain a `GrabbableObject` component.

Chess Table Tile Components

Components that attach to chess table tiles.

8.a. The ChessTilePieceTrigger Component

- A component that is attached to the same `GameObject` as a **trigger Collider** for a chess table tile.
- This component is responsible for detecting when a chess piece is being placed on a given tile.

FAQ

(Frequently Asked Questions)

Q: Does this asset work with the Rift, Quest, Valve Index, Vive, etc?

A: Yes! The chess engine works with all devices that are compatible with the 'com.unity.xr.management' package. *Compatibility with other XR management plugins such as 'Oculus Integration' is available upon request.*
