SPINCOIN

PRO HUD FOR SPIN&GO

[Описание SpinCoin. Версия на русском языке]

HUDs work only in H2N3, to work in H2N4 you can convert the config yourself - How to convert a config from Hand2Note 3 to Hand2Note 4

For Pokerstars, IPoker and Winamax in 3max you can use ONLY two HUDs - “SpinCoin 3w Static BRIGHT” or “SpinCoin 3w Static with TABS BRIGHT”, for HU - “SpinCoin 2w Static BRIGHT”.

Discount on subscription Hand2Note to 33%! Details in the skype - petan2002

We have another hud - **SmartGo HUD** for Spin&Go tournaments. Hud is made in the style of Hud for PokerTracker4 from pokerschool SmartSpin. For SpinCoin owners, there are additional discounts on the new hud. Traditionally, there is 1 week of free trial for the test of hud.

[Описание SmartGo на русском языке]

[Description of SmartGo. English version]

Good day! I would like to draw your attention to HUD for the today most powerful poker tracker Hand2Note! **SpinCoin** is designed to play in Spin&Go (and their analogues 3max) tournaments (including MTT 3max tournaments), as well as for HU tournaments. In **SpinCoin**, there is a huge amount of stats with detailed layouts for sizings and ranges, both during the game (through the huds) and in after-game analysis (via popups).

By purchasing this hud you will receive several sets of huds at once, from which you will need to choose the hud that you will use in the game. At any time, you can start using another hud from the set. At the moment, the set includes 4 versions of huds:

- ***SpincoinPro*** - Hud imprisoned for players of high limits, just irreplaceable in the regwars. With this you feel like a Boeing pilot. Also strong recommended for playing HU SNG. The maximum number of stats on the table.

- ***SpinCoin (Standart)*** - Hud for medium limits. Preflop almost does not differ from Pro version, but postflop is already cropped, but it's still a lot. Universal ~~soldier~~ choice.

- ***SpinCoin Light*** - Hud for low limits, the number of stats is significantly reduced, but even so the hud just scares the amount of information MTT players. Adaptation step when switching from old trackers to Hand2Note.

- ***SpinCoin Basic*** - Hud created by the old chinese traditions - from it they cut off everything that is possible until it became impossible to play and returned the last cut off stat to the place. The ideal choice of players in the GTO, who believe that this is for weaklings, but still understand that exploit is sometimes needed in this tournaments. Less informative is the only standard hud from PokerTracker4.

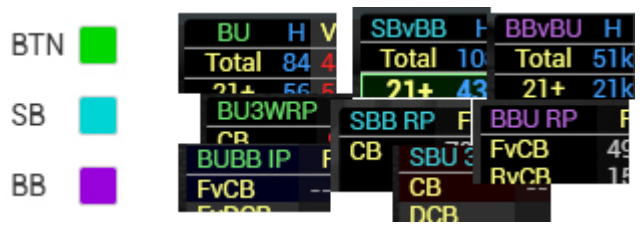

SpinCoin it's actually two huds in one - a separate hud for 3max and a separate hud for HU, switching between huds takes place without the player's participation and does not require the presence of additional software, as in the other trackers. This hud will also be fully operational when playing in HU SNG tournaments (a 3-max part will not be loaded).

Hud is made in the style of the well-known CoffeeHud's (which was used by the majority of players HU SNG), for easy adaptation of users at the beginning of use.

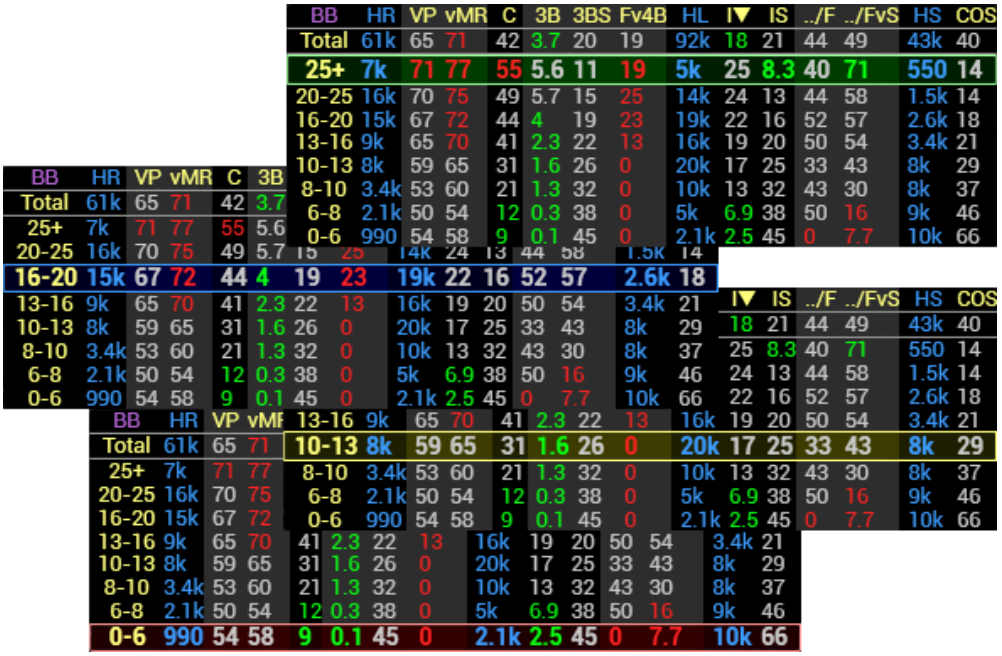

Due to Hand2Note's capabilities, the hud is executed on the principle of positioning, i.e. his tables are displayed on opponents, depending on your and their positions in the game. The fonts in the table headings are colored according to the color scheme of the positions applied in the Hand2Note tracker - this improves the orientation in the stats. We also tried to match the color schemes of the backgrounds of the tables for postflop, in order to understand at a subconscious level which pots belong to the stats and not to confuse them with each other.

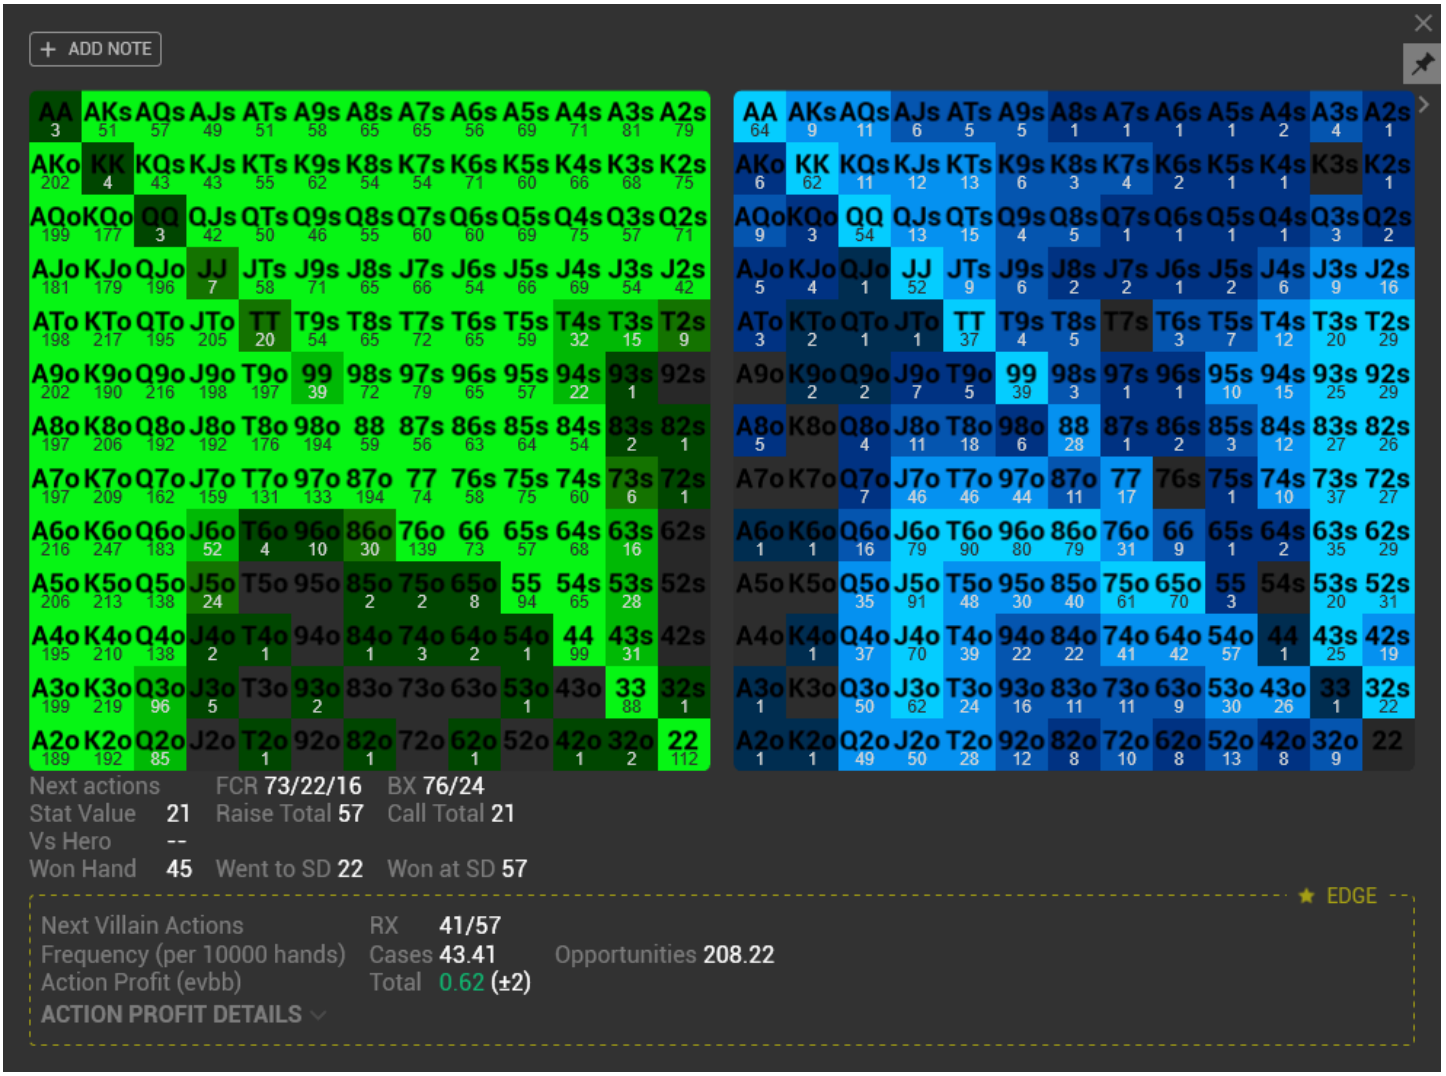

For the most effective HUD work, it is highly recommended to use additional programs that can transfer to Hand2Note stack sizes, current hand history, etc. data. Depends on what room you use it can be StarsHelper, SessionLord, 888Caption, iPokerTools, PartyCaption and so on. The list of the supported programs you can find on Hand2Note website. These programs use allows HUD to obtain dynamically (while playing) information about the current players stacks, it shows HUD right from the first hand (not with the second like PokerTracker, Holdem Manager and other trackers do), allows to track the history of the current hand, ~~and also shows Nash charts and push charts depending on effective stack (no delays and improper showing of effective stack level while changing blinds level; it happens with other rooms).~~ (The output of the charts is temporarily blocked by the creators of Hand2Note, we hope that someday this functionality will be unlocked).

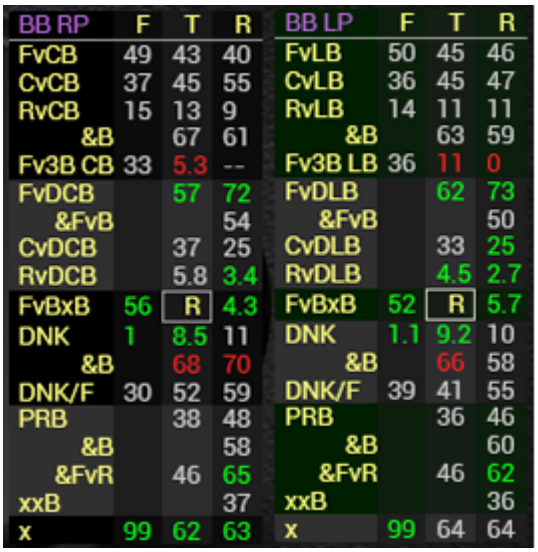

In the tables of hud, the dynamic allocation of statistics current effective stack is implemented, which allows you to quickly find the necessary statistics in a large number of digits. This is accomplished by a combination of highlighting, border, and font thickness.

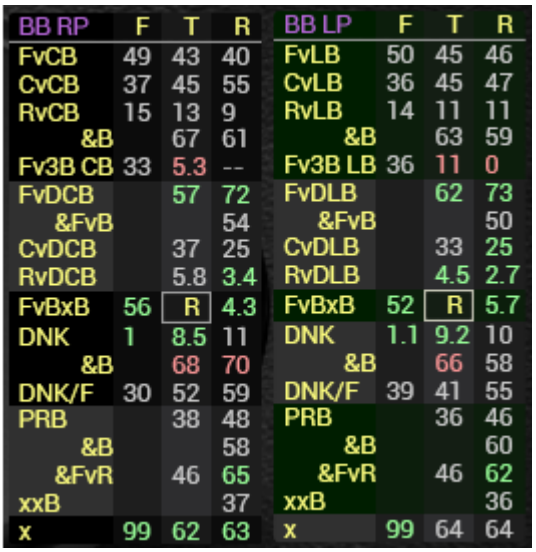

Hud allows to display heat maps for all statistics, for PokerStars this function is implemented in text form, in accordance with the rules of this room. Functional diagram output works in popups for all rooms without exception, which additionally allows for a visual analysis of gaming sessions.

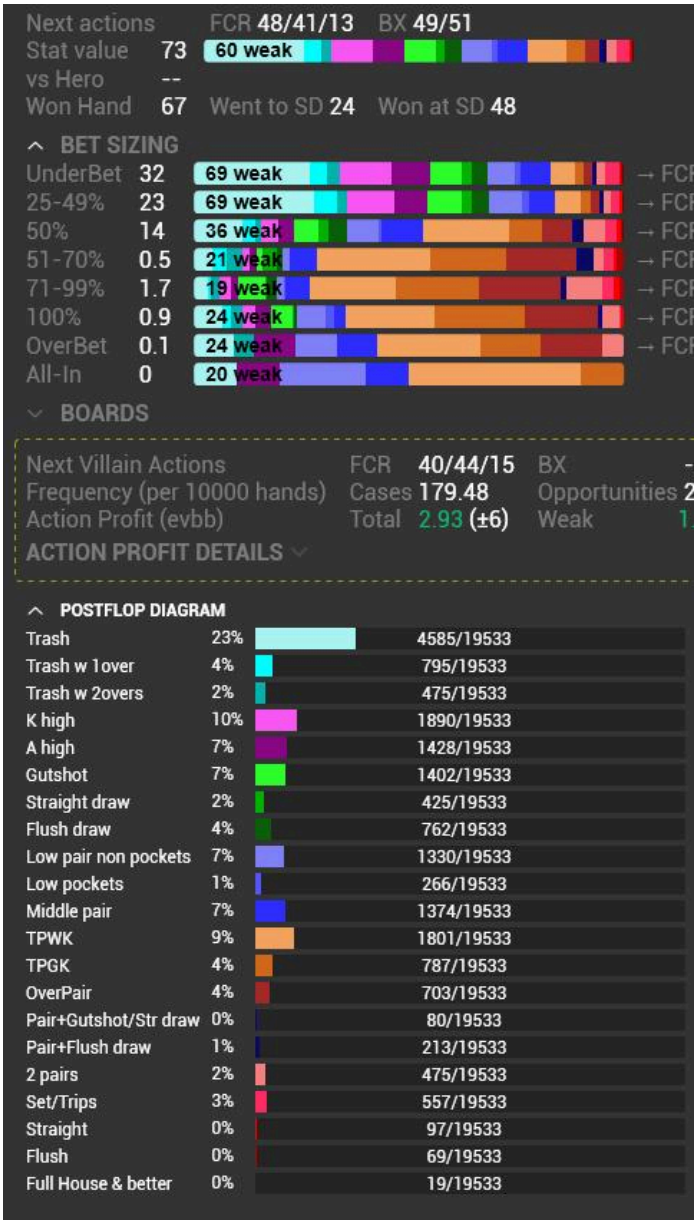

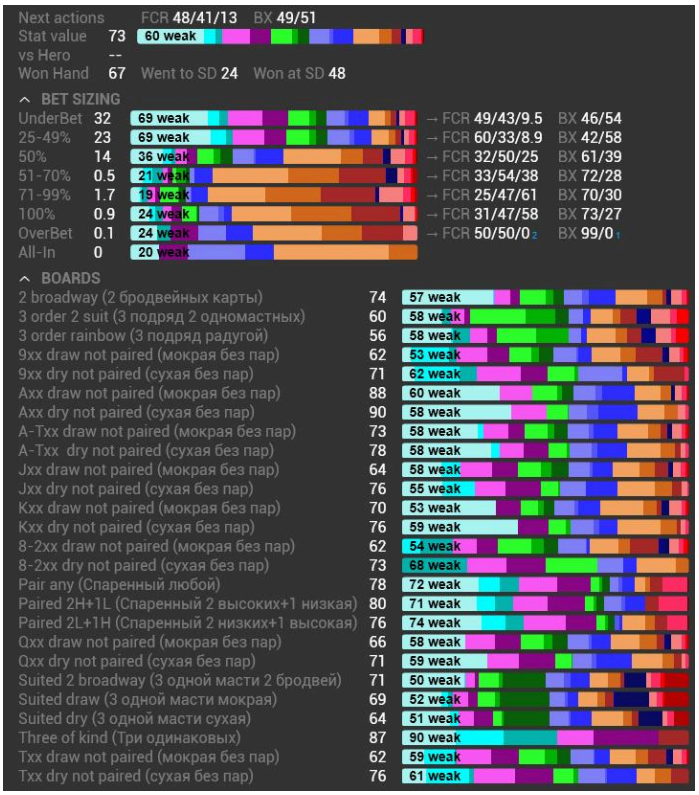

All the stats in the hud have color ranges depending on the aggression - green is more tight, gray is the norm, reds are more aggressive. Config contains two versions of each hud with a bright and grinder (quiet) coloring of the stat ranges.

Together with the hud we transfer the modified settings of the Hand2Note tracker. We completely redesigned hand groups at the postflop, significantly expanding them to the specifics of the Spin&Go and HU tournaments, with an adequate color scheme with a logical change of colors to improve the perception. We also introduced a large number of postflop statistic layouts depending on the structure of the boards. Groups of hands and boards appear in the extended standard popups on the stats and significantly improve the analysis of the game. In addition, we have worked on sizings of bets, calls and even folds - in our hud, there are diagrams and stats broken in sizing (the BET SIZING section) in the standard popups.

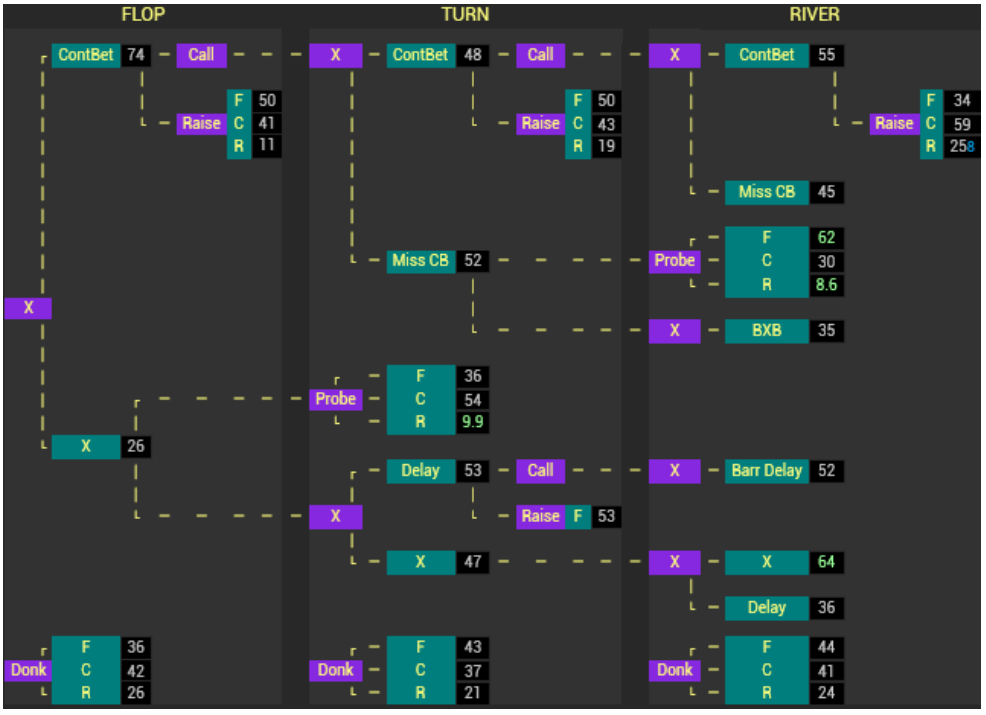

Each hud has tables with Stats on the Hero (the background of the tables is purple so as not to be confused with regular stats). By default, they are disabled for display, but if necessary, their display can be turned on quite easily in a few clicks in the Hud Editor. Please contact support for more information.

We paid much attention for after-game analysis. For parsing the base of hands in popups for each player (which can be called from the list of players), a large number of statistics are created that are not output to the hud. Even those stats that we do experimentally are available to any user of our hud. We are constantly improving the huds and popups to analyze the game, taking into account the wishes of the players.

All future updates are **FREE**. We stick to this policy from the beginning of our sales and do not intend to change it in the near future.

The tables of huds and popups are open for editing - you can make any changes and adjust for yourself.

Regardless of how and where you purchased our hud, we will help you free to install and configure your hud with Skype or Teamviewer. We will answer any questions about the hud, we will implement individual adjustments of the hud, we will make individual stats, we will help with any problem that we are able to solve.

Updates

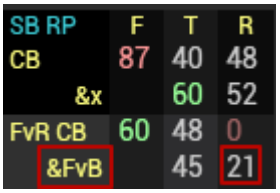

Updates are free. The current version of the hud is indicated at the beginning of this document. The current version of the installed on your computer hud you can find by calling in any way the main popup (most easily by double clicking on any player in the list of players in the main window Hand2Note). Looking for the "HU" tab, the bottom right corner:

If the versions are different, then to update the hud, you need to contact the support by **skype - petan2002**

List of changes

ver. 19.13. Изменена логика стат FvR CB & FvB (River) для HU, позиции SB - для рейзпотов и лимппотов действие Bet на Терне заменено на действие Call. Changed the logic of stats FvR CB & FvB (River) for HU, position of SB - for **raispots** and **limppots**, the action Bet on the Turn is replaced by the action Call.

Cost of SpinCoin HUD depending on the limit played:

3$ - 30$
7$ - 60$
15$ - 85$
30$ - 110$
Unlim - 135$

Any help in setting HAND2NOTE and SpinCoin HUD via skype, teamviewer. If you have any questions, please contact us in skype - petan2002, e-mail: petan2002@gmail.com
