Participation of THDC-IHET, Tehri Students in Cognizance Techfest at IIT Roorkee

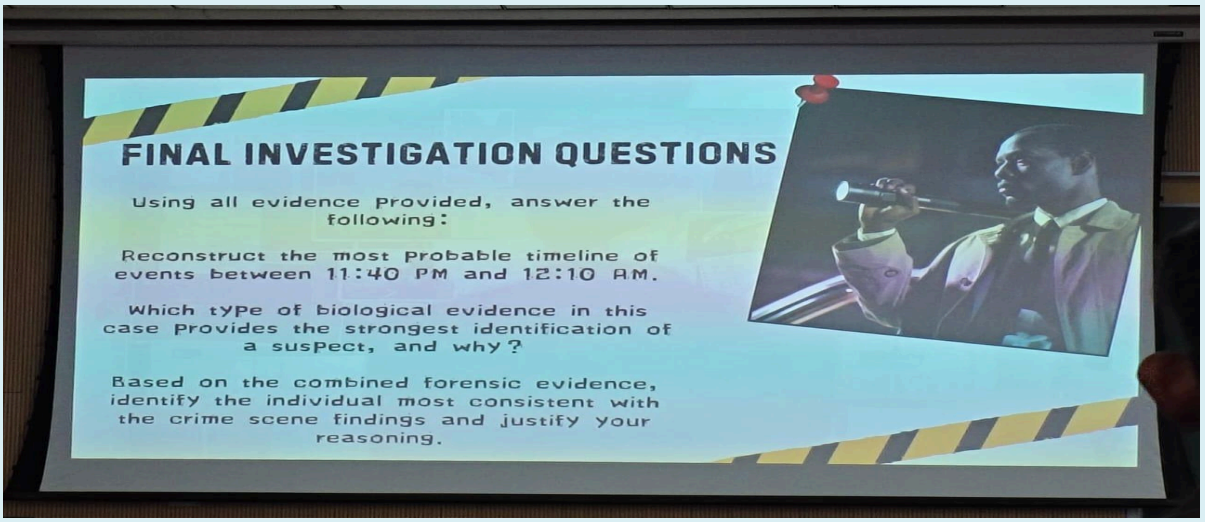

Date: 13/03/26 to 15/03/26

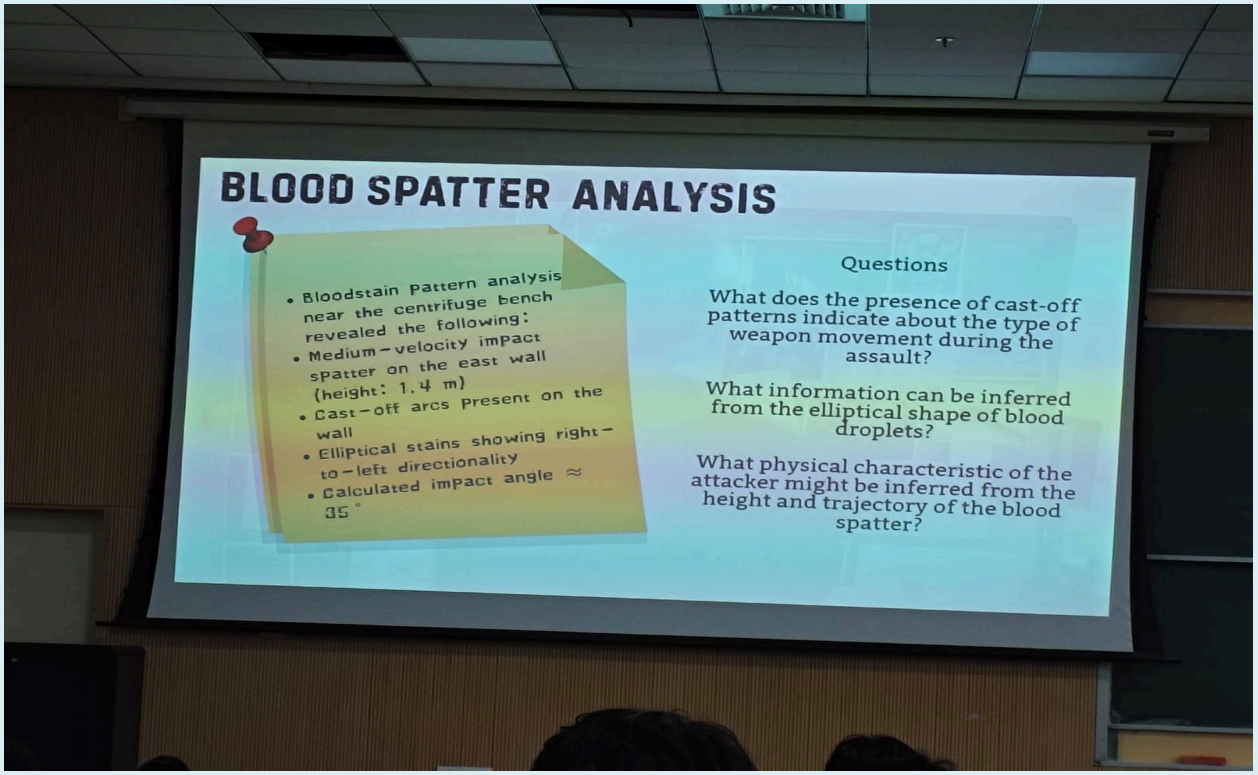

Student Coordinators: Nitish Saini

About the event:

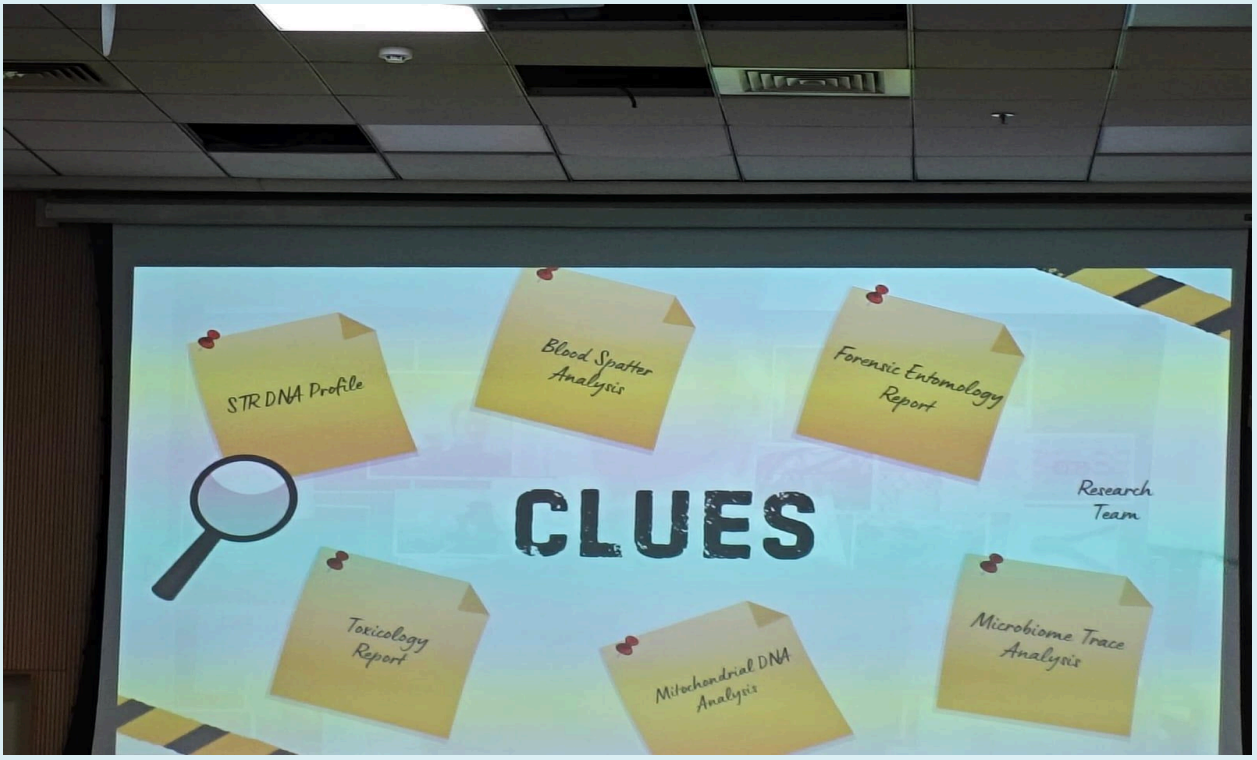

Students of THDC-IHET, Tehri participated in Cognizance, the annual technical festival of the Indian Institute of Technology (IIT) Roorkee, recognized as one of Asia's largest student-run technical fests. The three-day extravaganza serves as a premier platform for students, professionals, and industry leaders to converge and showcase innovation. It features a diverse array of activities, including intense robotics competitions like Armageddon, drone challenges like Sky Maneuver, algorithmic coding contests, and insightful tech talks by renowned experts. The fest aims to address contemporary intellectual and technological needs while fostering young minds through exhibitions, hands-on workshops, and collaborative networking opportunities

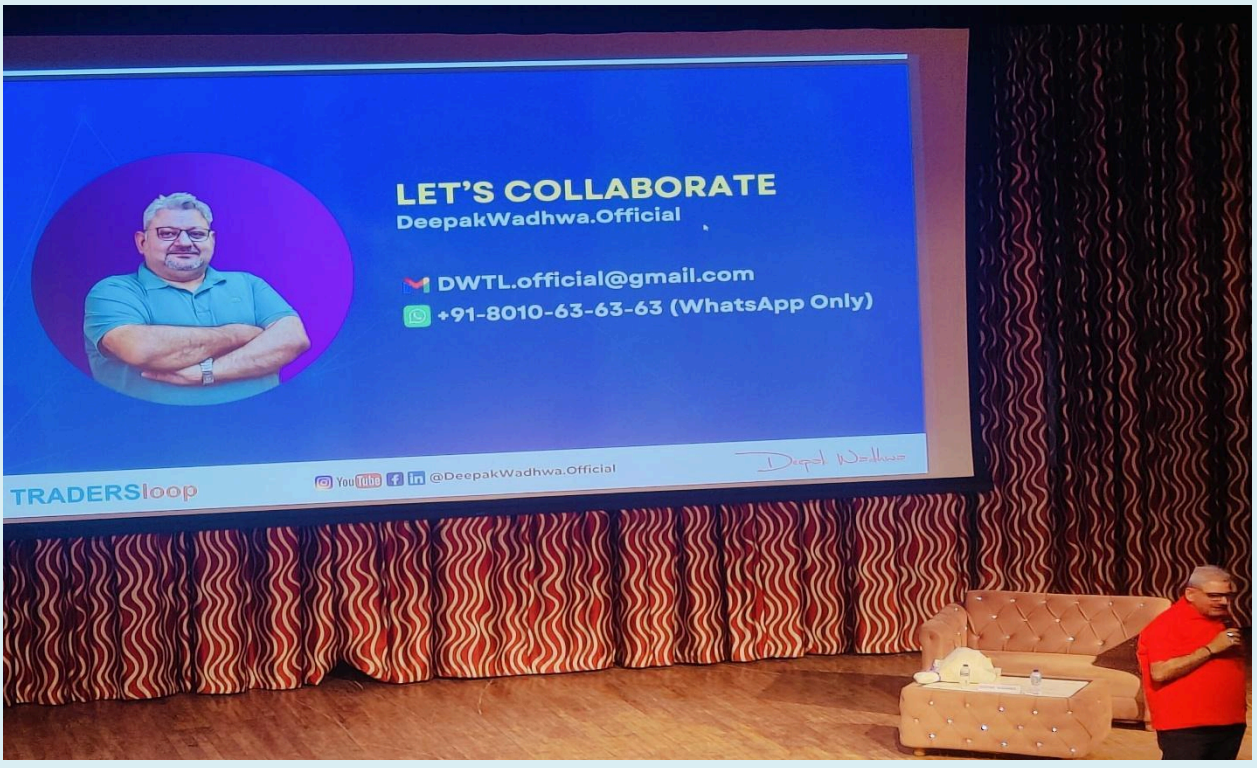

No. of Beneficiaries: 22

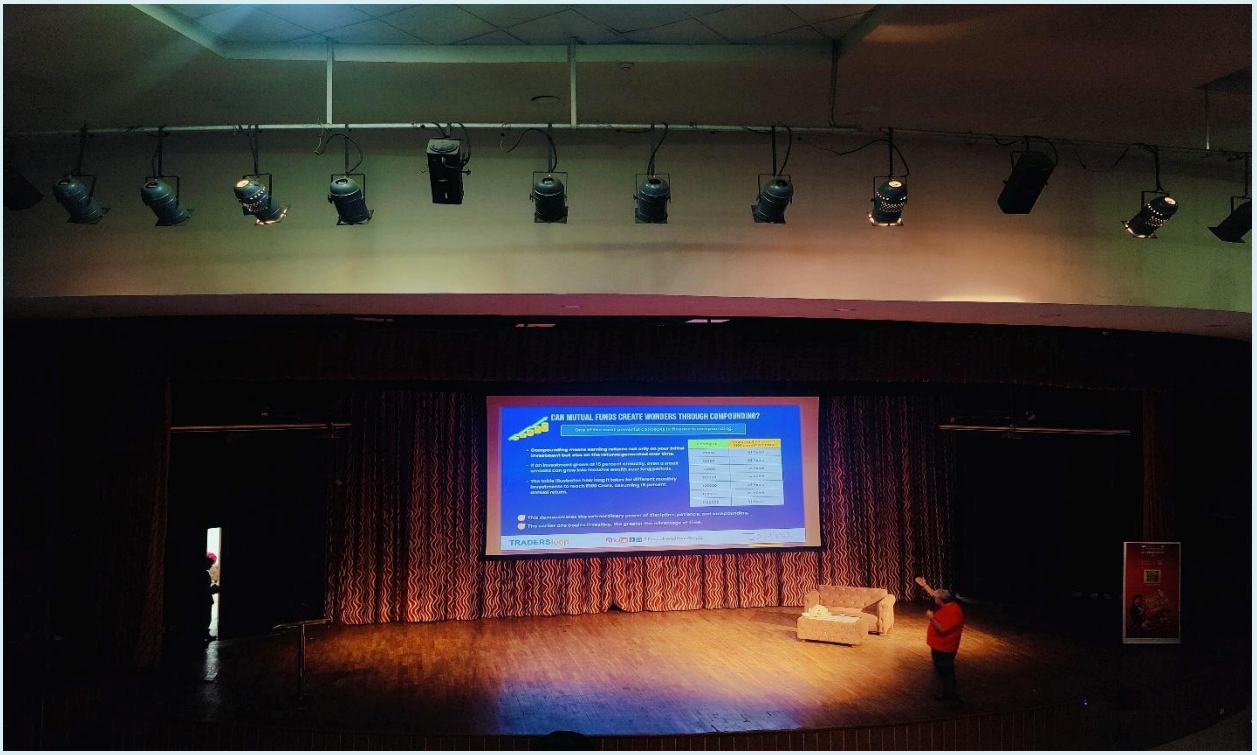

BLOOD SPATTER ANALYSIS
• Bloodstain Pattern analysis near the centrifuge bench revealed the following:
• Medium-velocity impact spatter on the east wall (height: 1.4 m)
• Cast-off arcs Present on the wall
• Elliptical stains showing right-to-left directionality
• Calculated impact angle ≈ 35°
Questions
What does the presence of cast-off patterns indicate about the type of weapon movement during the assault?
What information can be inferred from the elliptical shape of blood droplets?
What physical characteristic of the attacker might be inferred from the height and trajectory of the blood spatter?
