Media Library

The **Media** menu can be used to manage your existing media files, such as images, audio, videos, and documents. You can also [upload new files to your Media Library](#) using **Media > Add New**.

The default screen for the Media menu is the **Media Library**.

Media Library [Add New](#)

73.6 MB used, 7.9 GB (99.1%) upload space remaining. You can upload videos and embed them directly on your blog with a [Video Upgrade](#).

<input type="checkbox"/>	 2009-10-22-11h4 4m09_800px JPG	Anthony	fsggfgsgsgsg , 2009/11/18	0	2009/11/18

As with other dashboard pages, you can use the [Screen Options](#) in the upper right to configure which columns are shown in the table.

Under the title **Media Library**, you can see how much upload space you have used and how much is remaining.

Place the cursor over a file name to see the **Edit**, **Delete Permanently**, and **View** action links appear.

If you click on the **Edit** link, the **Edit Media** page will load, allowing you to change the default **Title**, **Alternate Text**, **Caption**, and **Description**. Remember to click the **Update Media** button after making any changes.

 **Edit Media**

Location of the uploaded file.

Update Media

If you click on the **Edit Image** button, you will be able to perform some basic editing functions on the image.

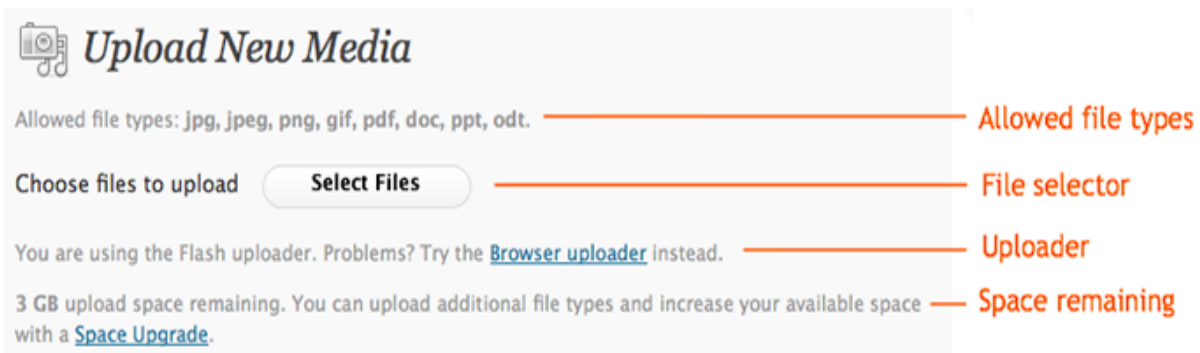

Add New

Add New

By clicking **Add New** on the [Media](#) menu you can upload images, audio files, videos and other files to your Media Library without having to start a new post.

The **Add New** screen lists your allowed file types, allows you to select files to upload, and shows your remaining upload space.

Most users will see the Flash uploader by default, but you can click the **Browser uploader** link to switch.

To add a file, click the **Select Files** button and select one or more files to upload. As the files are added, you will see a progress bar appear for each upload. When a file has finished uploading, you will see a **Show** link on the right.

	add-new-browser-uploader	Show
	browser-uploader-link	Show
	media-add-new	Show
	media-edit	Show
	media-item-hover-action-links	Show
media-library.png		
media-menu.png		
Save all changes		

Clicking on the **Show** link will allow you to edit the **Title**, **Alternate Text**, **Caption**, and **Description** for a file. It will also provide you with the URL of the file. Here's an example of the options for an image upload:

	File name: dscn0293.jpg
Edit image	File type: image/jpeg
	Upload date: 28/12/2009
	Dimensions: 3264 × 2448
Title *	<input type="text" value="DSCN0293"/>
Alternate text	<input type="text"/>
	<i>Alt text for the image, e.g. "The Mona Lisa"</i>
Caption	<input type="text"/>
Description	<input type="text"/>
File URL	<input type="text" value="http://fir3testthingshere.wordpress.com/files/2009/12/dscn0293.jpg"/> <i>Location of the uploaded file.</i> Delete

We've had good success with file sizes up to 1 GB. You can try file sizes up to 1.4 GB, but your experience may vary. Remember, uploading big files can take a long time!

To learn how to insert an image, audio, video or other file directly into a post or page, check out the [media icons](#) documentation.

Uploading and Inserting Media

In addition to uploading media files directly to your blog's **media library**, you can also upload, manage, and insert images, audio and video directly from your post or page editing/creation screen using the icons found within the **Upload/Insert** group.

Note: Click on the links below for full instructions on using the media icons.

Add an Image – Easily insert an image into a post or page.

Add Video – If you wish to upload video files directly from your computer, you will need to purchase **VideoPress**. For information on embedding videos from other hosting sites/services (e.g. YouTube, DailyMotion, Vimeo, etc.), please review the links in the **Related** section of our **Videos** support document.

Add Audio – To link to audio elsewhere without storing them in your Media Library, check out your other Audio options.

Add Media (PDF, Microsoft Word document, etc.). This icon will allow you to insert a **download** link to a document or file. If you wish to embed the actual document/file into the post/page content, you can use [Scribd](#).

Images

Photos are a great way to enhance your WordPress.com blog, and adding and managing

them is easy.

Uploading Images

You can upload the following image types to a post or page on your WordPress.com blog by using the **Add an Image** icon found within your visual editor:

- .jpg/.jpeg
- .gif
- .png

Notes: Images should be saved in RGB mode, and you will see the best results if you use the sRGB color profile. Animated gifs will not display unless they are displayed at 100% full size. To only upload an image to your blog's Media Library (and not attach it to a specific post/page), use **Media -> Add New** in your dashboard.

[↑ Table of Contents ↑](#)

From Your Computer

1. Go to **Posts -> Add New** or **Pages -> Add New**, or open an existing post in editing mode.
2. Place your cursor where you would like the image to appear, and click on the **Add an Image** icon found in the **Upload/Insert** icon group directly above your editor

3. Click on the **Select Files** button and choose the image file from your computer.

Add media files from your computer

Allowed file types: **jpg, jpeg, png, gif, pdf, doc, ppt, odt.**

Choose files to upload

Select Files

You are using the Flash uploader. Problems? Try the [Browser uploader](#) instead.

4. Once the uploading/crunching process has completed, you will be given the option to edit some settings before inserting the image into the post/page.

[↑ Table of Contents ↑](#)

From URL

The following process describes inserting an image which already exists on another web site or domain. This method will not upload the document/file to your blog's Media Library. Because it is hosted elsewhere, if the file is removed from its location, the image will no longer work on your blog.

1. Go to **Posts -> Add New** or **Pages -> Add New**, or open an existing post in editing mode.
2. Place your cursor where you would like the image to appear, and click on the **Add an Image** icon found in the **Upload/Insert** icon group directly above your editor.

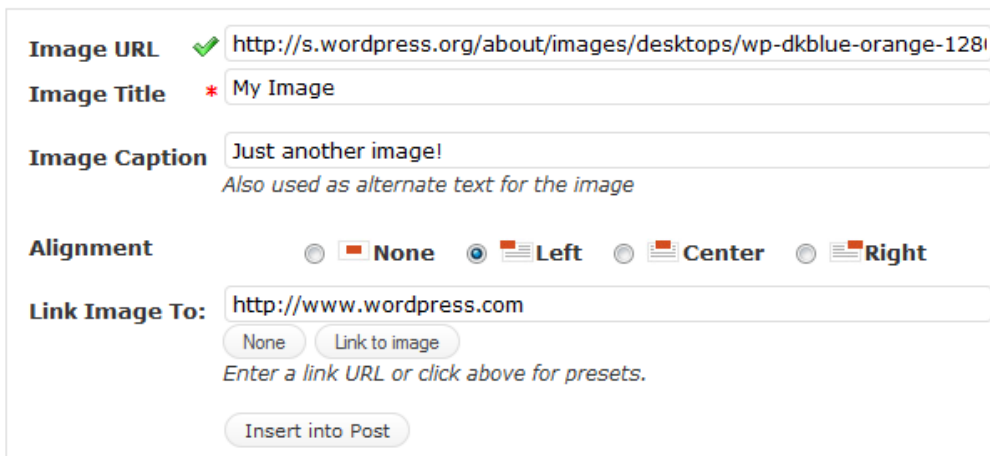

- 3.
4. Click on the From URL tab

- 5.
6. You will be given the option to edit the settings defined above before inserting the image into the post/page.

Add media file from URL

The form contains the following fields and options:

- Image URL:** A text field with a green checkmark icon and the value `http://s.wordpress.org/about/images/desktops/wp-dkblue-orange-128`.
- Image Title:** A text field with a red asterisk icon and the value `My Image`.
- Image Caption:** A text field with the value `Just another image!` and a subtitle *Also used as alternate text for the image*.
- Alignment:** Radio buttons for `None`, `Left` (selected), `Center`, and `Right`.
- Link Image To:** A text field with the value `http://www.wordpress.com` and two buttons: `None` and `Link to image`. A subtitle reads *Enter a link URL or click above for presets.*
- Insert into Post:** A button at the bottom.

7. When finished choosing your image settings, click on the **Insert into Post** button.

↑ Table of Contents ↑

From Media Library

The following process describes inserting an image which already exists in your blog's Media Library.

1. Go to **Posts -> Add New** or **Pages -> Add New**, or open an existing post in editing mode.
2. Place your cursor where you would like the image to appear, and click on the **Add an Image** icon found in the **Upload/Insert** icon group directly above your editor.

3. Click on the **Media Library** tab.

4. Locate the image you wish to insert and click its **Show** link.

- You will be able to edit some of the image's settings before inserting it into the post/page. Note that the fields will already be populated if you previously added the information when you uploaded your image to the media library.

↑ Table of Contents ↑

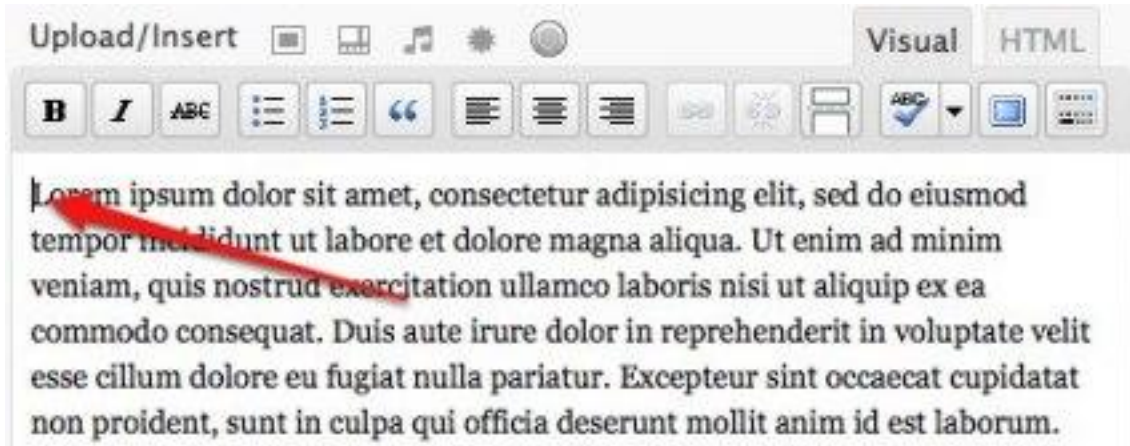

Image Alignment

When inserting images into your posts and pages, you can have your text wrap around them to promote a much better and attractive flow of content. This is a snap using the left and right alignment icons in your visual editor.

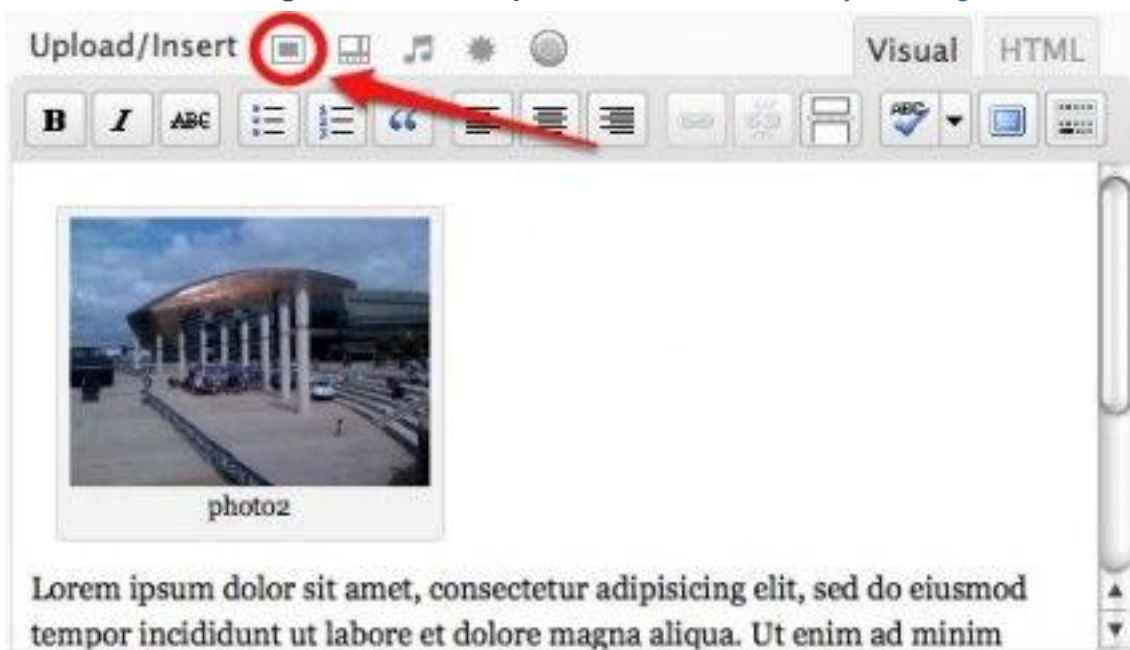

To begin, place your cursor at the beginning of any paragraph in the current post or page (this

depends on where you wish to insert the image).

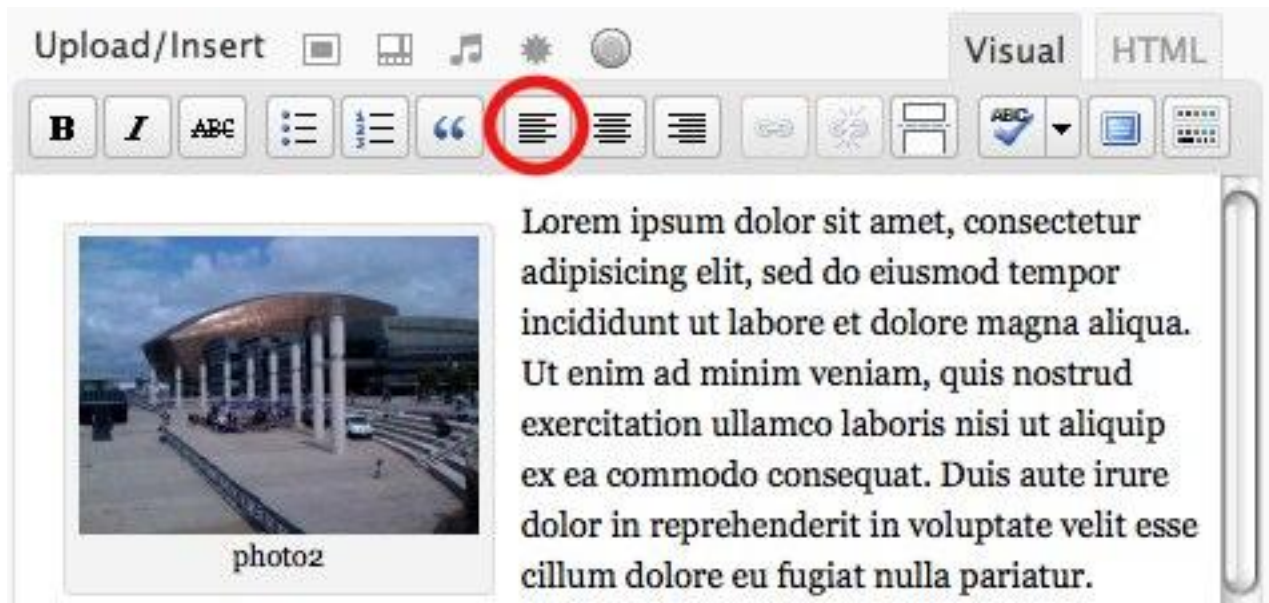

Click the **Add an Image** button in the **Upload/Insert** area. [Insert your image.](#)

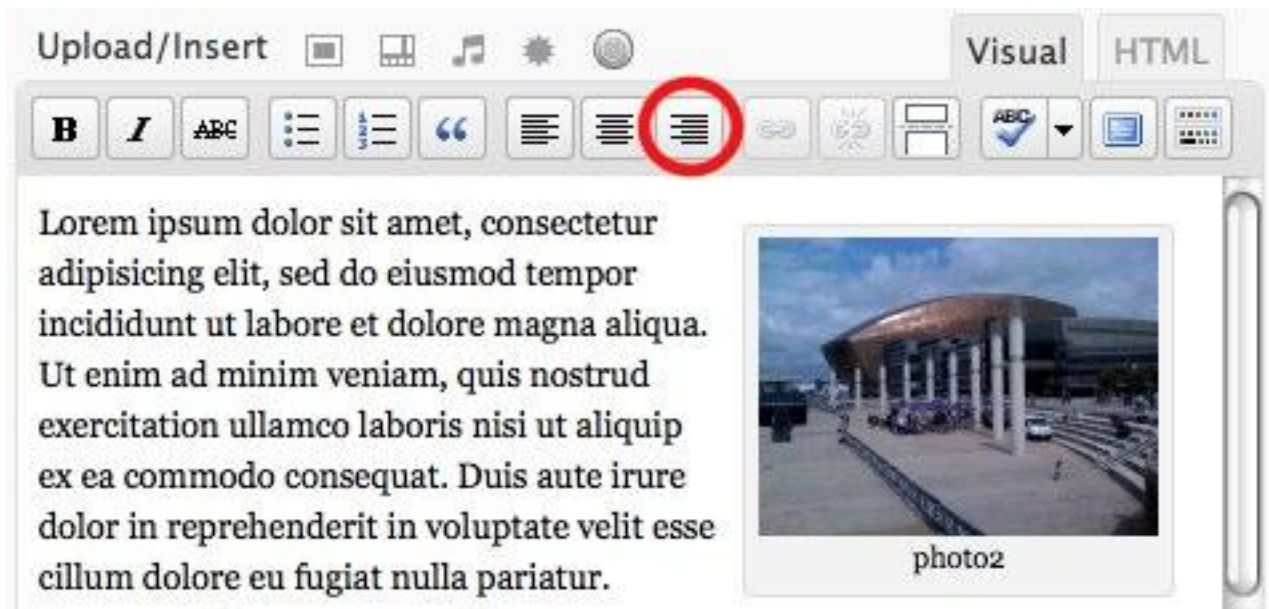

After the image appears in the editor, click on the image once, and click either the left or right alignment button to modify the position of the image and how text wraps around it. Here are examples of both:

Left Alignment

↑ Table of Contents ↑

Right Alignment

↑ Table of Contents ↑

Side by Side

If you would like to see images appear side by side on the same line, put the images next to each other and give them both either left or right alignment. Make sure the images are small

enough that they will both fit on one line, including borders and margins.

Image Settings

You can customize a variety of settings for each and every image uploaded to your WordPress.com blog's media library. There are a few ways in which you can access the settings for your images, so we'll outline all of them for you here.

Media Library

You can modify a few settings for your images directly from your media library, which can be accessed from within your dashboard via **Media -> Library** on the left menu.

Once in your blog's Media Library, you can hover your pointer over any of the images and choose the **Edit** option that appears (you can also simply click on the image's title).

You will now have the ability to edit some of the image's settings, as shown below.

	bbear-copy.jpg
	image/jpeg
	2009-08-04 12:34:46
Title	<input type="text" value="Bossy Bear"/>
Caption	<input type="text"/> <i>Also used as alternate text for the</i>
Description	<input type="text"/>
File URL	<input type="text" value="http://fir3testthingshere.wordpress.com/bbear-copy.jpg"/> <i>Location of the uploaded file.</i>
<input type="button" value="Update Media"/>	

Title – Image title to be displayed as a tooltip (when a mouse is hovered over the image).

Caption – Image caption to be displayed when using captions (will also display as the alternate text).

Description – Full image description.

File URL – This is the location of your image. Note that it cannot be modified.

After you modify any of the settings, make sure to click the **Update Media** button to save your changes.

[↑ Table of Contents ↑](#)

Within Posts

As well as being able to set the size of an image from the image settings you can also edit the image directly from the visual editor. To do this click on an image in the visual editor and select

the configure button:

Source – The actual URL for the image in case you want full control over parameters

Size – Exact control over width and height, with the option to reset to the image's original values.

CSS class - The CSS classes that will be added to the image given the current settings. You can override this as appropriate.

Styles – Any CSS styles to be applied to the image.

Image properties – Thickness of border (in pixels), vertical space (in pixels), and horizontal space (in pixels).

Title – Image title to be displayed as a tooltip.

Link rel – The link's [rel attribute](#), for adding nofollow amongst other things.

CSS class – CSS class applied to the link.

Style – Styles applied to the link.

Target – Select whether the link should open in a new window or the same window.

↑ [Table of Contents](#) ↑

Drag size

If the above options aren't enough you can also directly resize an image using any of the standard resizing handles:

The image can then be resized by moving the mouse.

Note that the image may become distorted or blocky, depending on your resize.

Image Editing

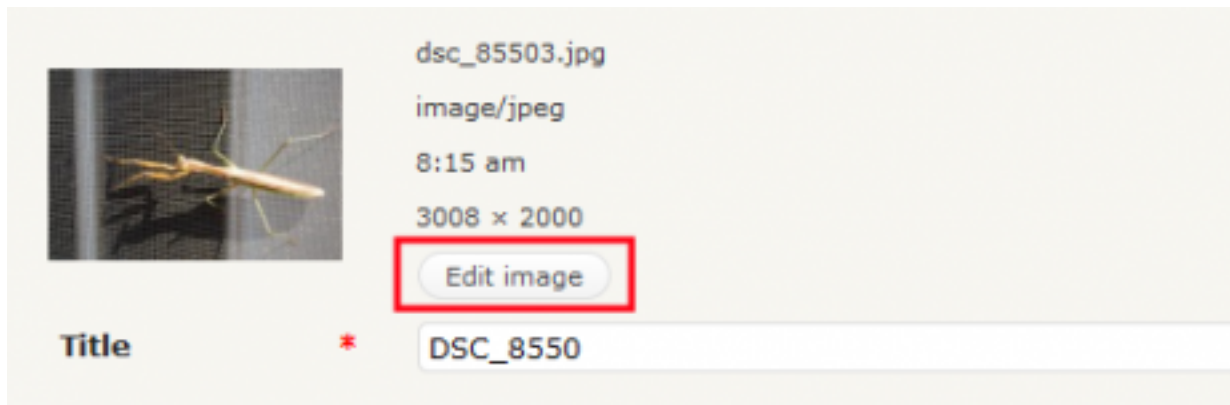

For each image uploaded to your WordPress.com blog's Media Library, you have some basic editing options (crop, rotate, flip, and resize) available.

Opening

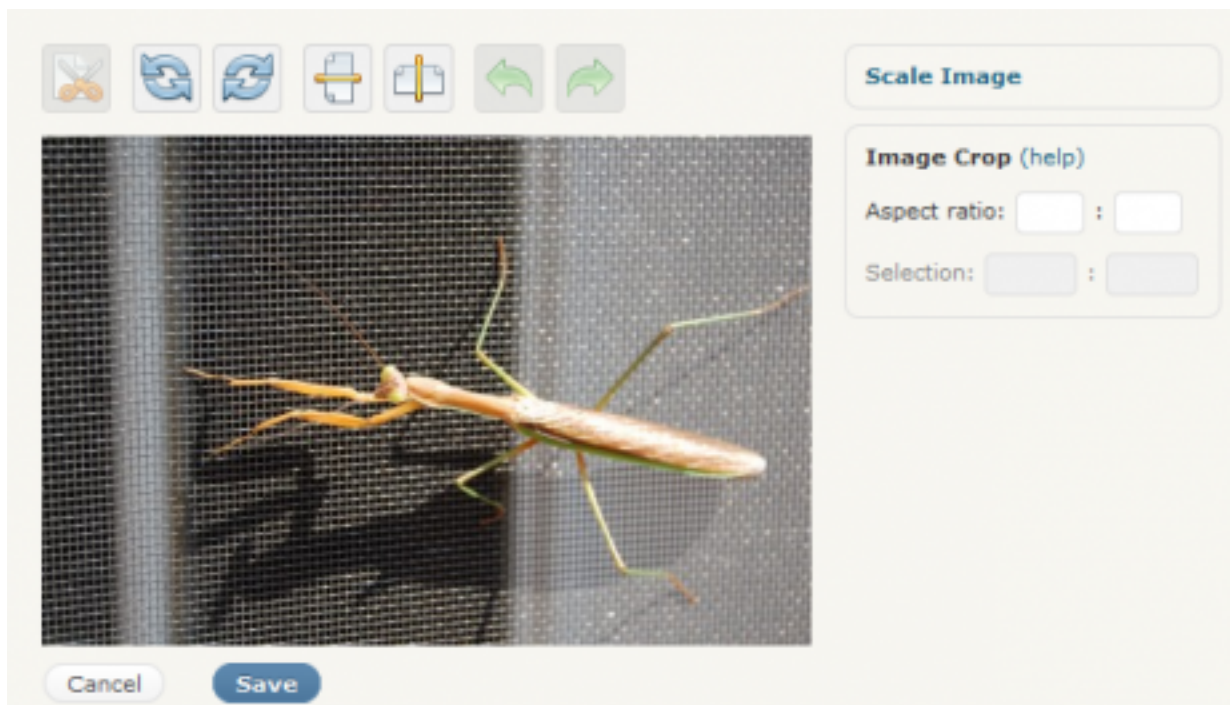

To access these options, first go to **Media -> Library** in your blog's dashboard and click on the name of any image you wish to edit:

Click on the **Edit Image** link to reveal the advanced editing options:

The screen will load and look like the following:

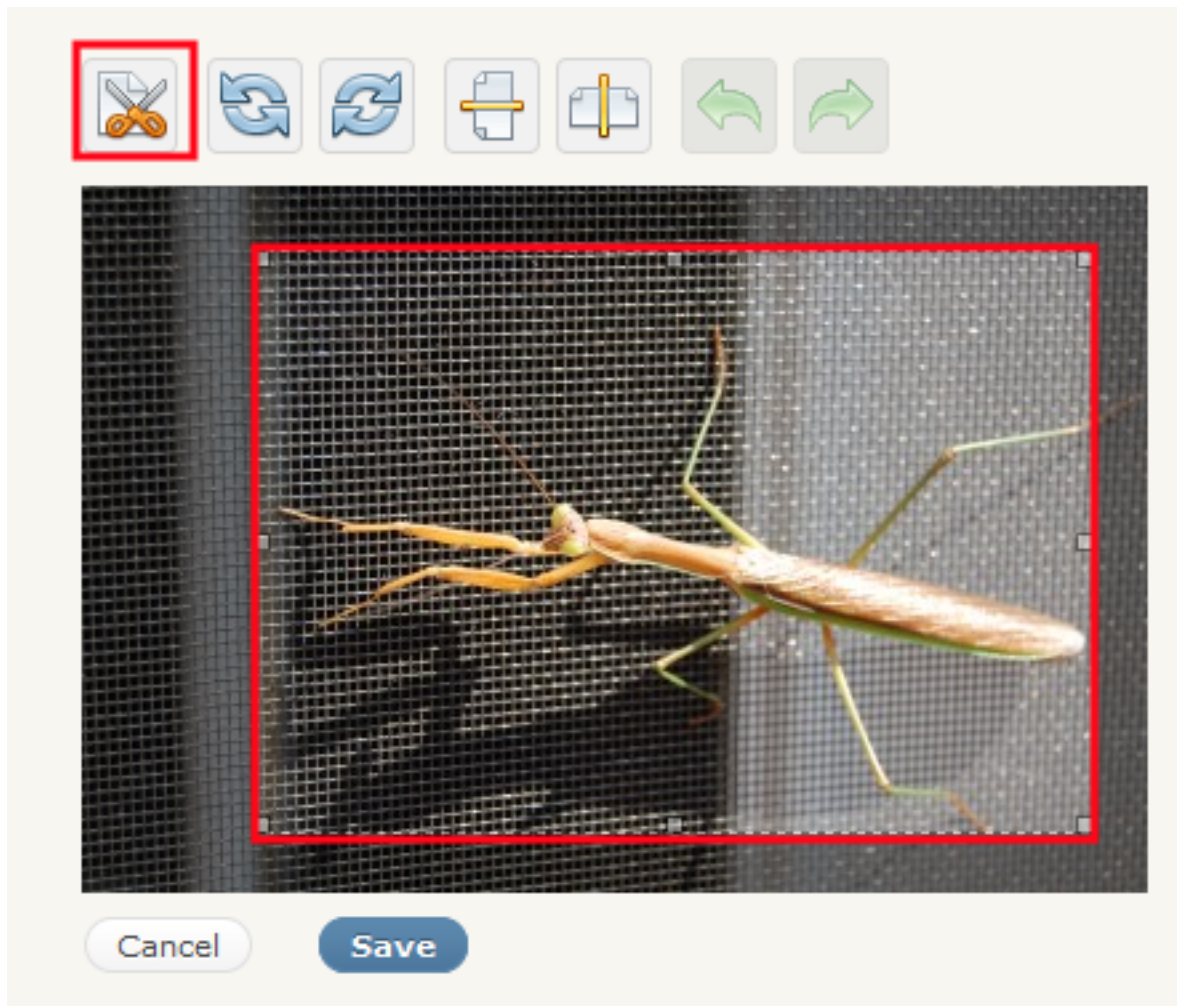

[↑ Table of Contents ↑](#)

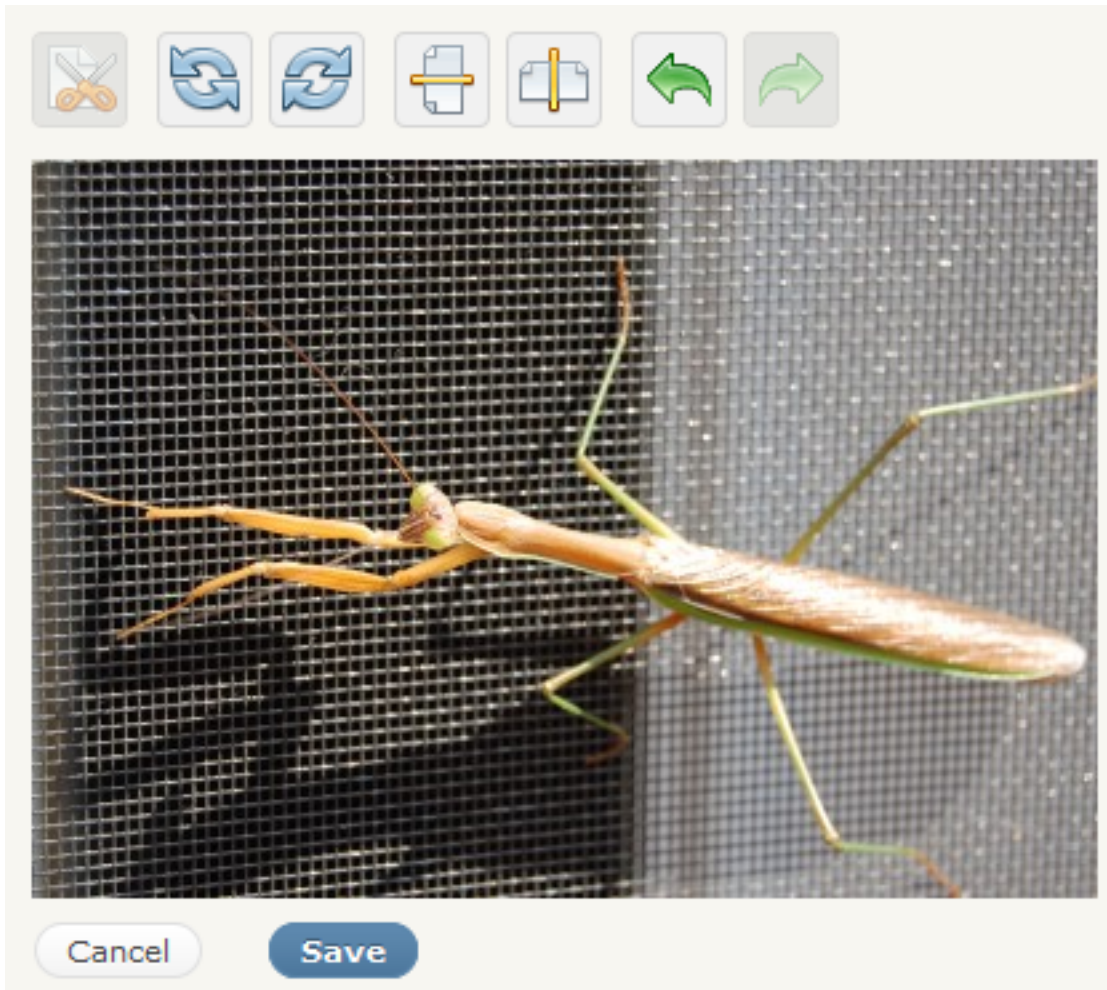

Cropping

You can remove any unwanted portion of an image (like an ex-boyfriend) you have uploaded to your media library by using our cropping feature.

First, with your mouse (click and drag), select the portion of the image you want to keep. Once you're happy with the selection, click on the **Crop** button (highlighted below):

You will then have your new image:

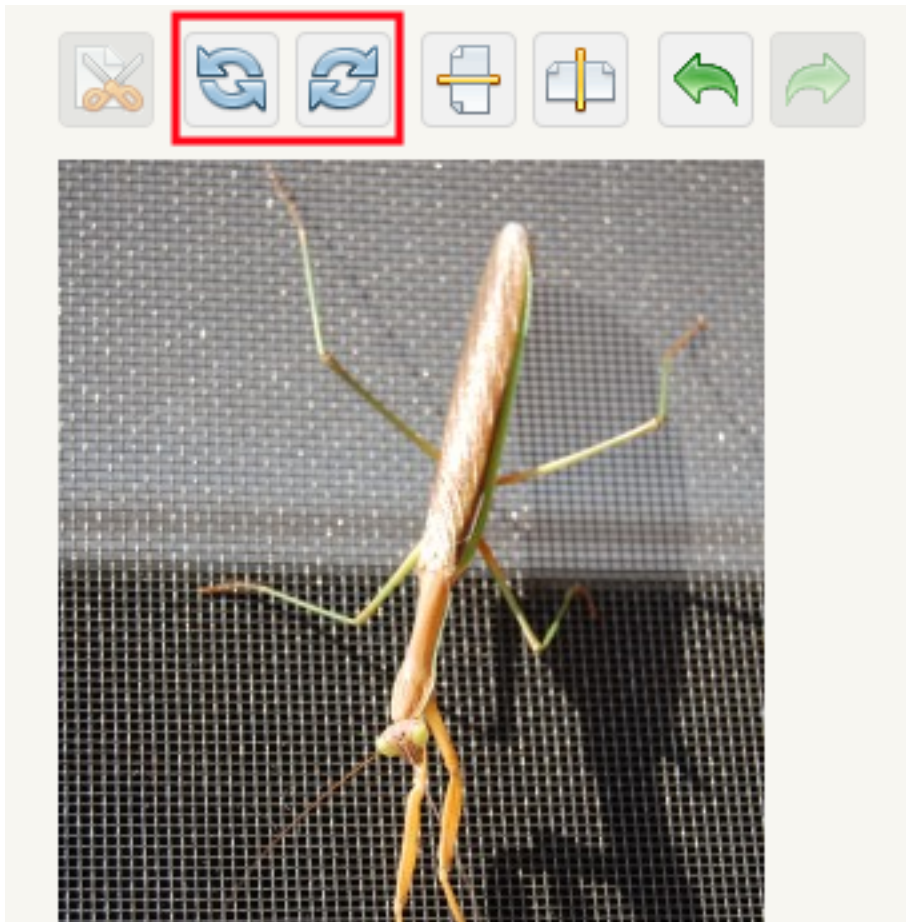

If happy with the result, click **Save**. If unhappy, click **Cancel**. Note that you **must** click **Save** for the crop to finalize.

[↑ Table of Contents ↑](#)

Rotating

You can rotate (clockwise or counter-clockwise) any image in your media library using the appropriate icons above the image in its editing screen:

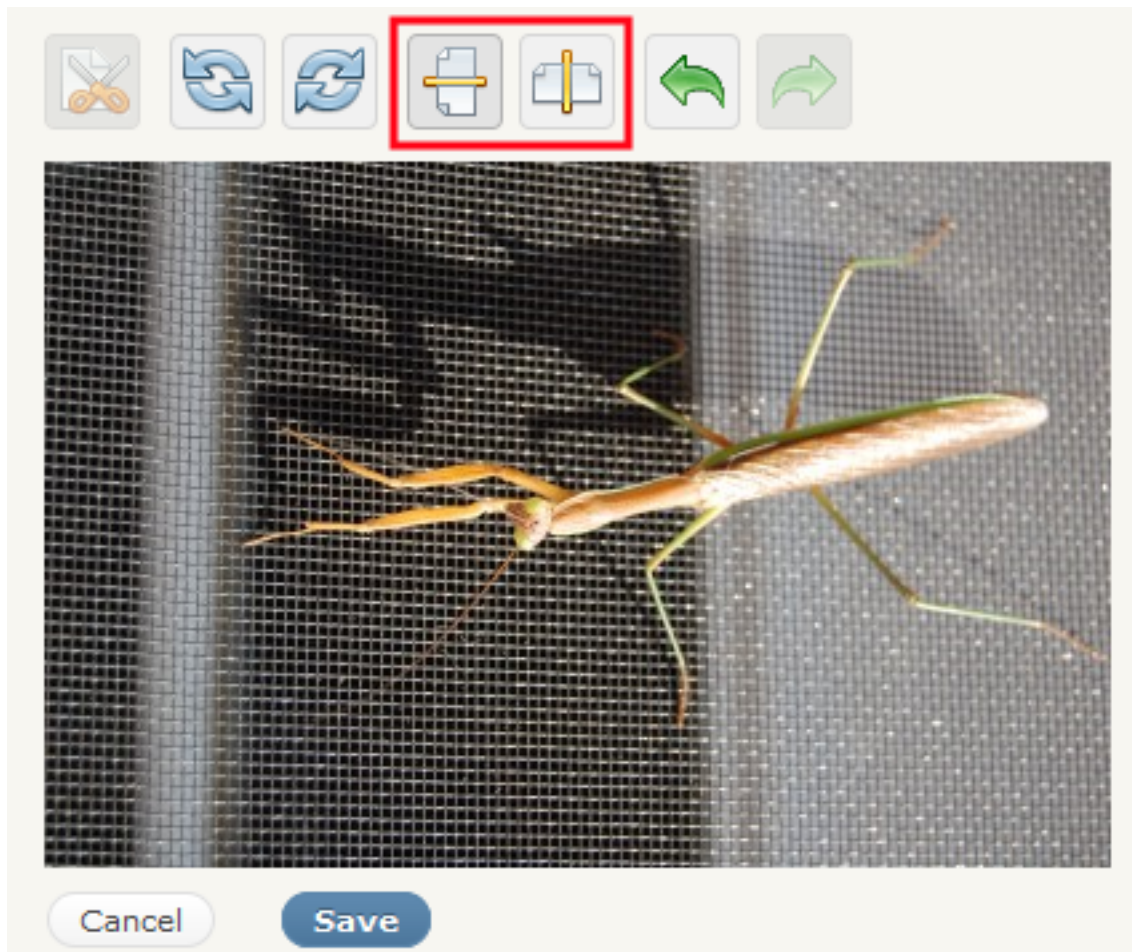

Be sure to click **Save** in order to finalize the image rotation. If you are unhappy with the result, click the **Cancel** button.

[↑ Table of Contents ↑](#)

Flipping

You can flip (vertically or horizontally) any image in your media library using the appropriate icons above the image in its editing screen:

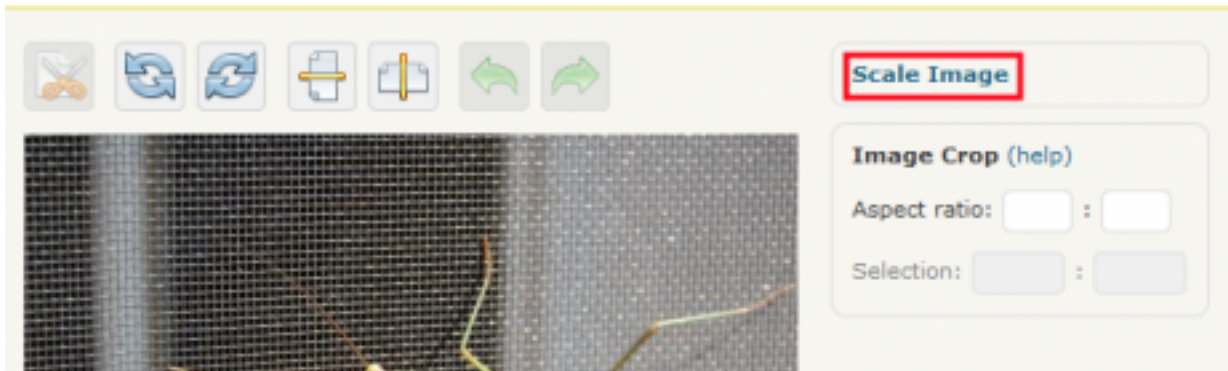

Be sure to click **Save** in order to finalize the image rotation. If you are unhappy with the result, click the **Cancel** button.

[↑ Table of Contents ↑](#)

Resizing

You can proportionally scale any original image in your Media Library. For best results the scaling should be done before performing any other operations on it (crop, rotate, etc.). Note that if you make the image larger it may become fuzzy.

Click on the **Scale Image** link to reveal the editing fields.

If you then change the width (first field), you will notice that the height (second field) will adjust automatically and proportionally. Once finished, click **Scale** to finalize the action.

[↑ Table of Contents ↑](#)

Undo and Redo

Similar to an image editing program found on your desktop, you also have the ability to undo and redo edits you have made on an image. These icons are illustrated below:

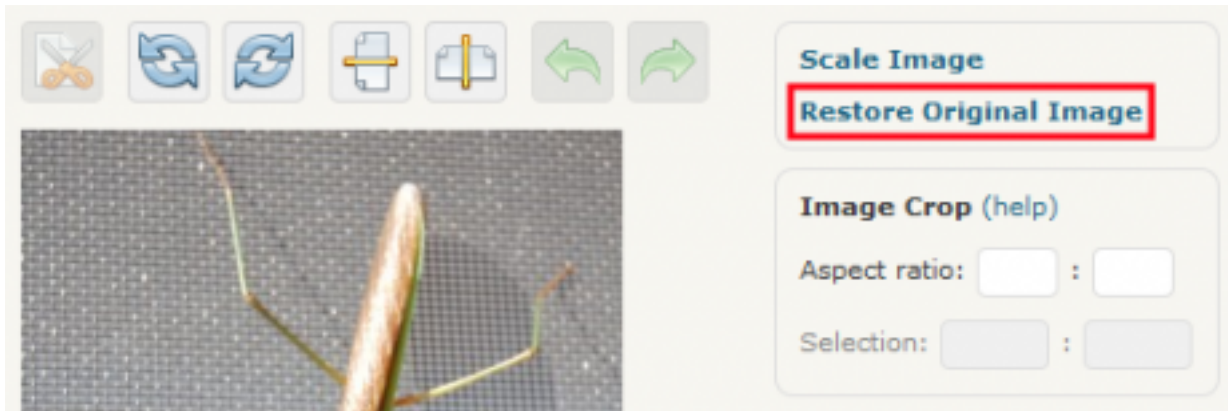

[↑ Table of Contents ↑](#)

Reverting

It's always a good idea to maintain a copy of any images on your computer, but you do have the ability to revert any previous edits made to the image and restore the original image that you uploaded initially to your media library.

When you open an image in editing mode (one to which you have previously made edits), you will see a **Restore Original Image** link:

If you're sure you would like to restore the image, click on the **Restore image** button. The image should then revert back to its original form, and you will receive a message that the restoration was successful.

Deleting Files

To delete any files or uploads from your WordPress.com blog's Media Library, start the process by navigating to **Media -> Library** in your blog's dashboard:

Next, using your mouse, hover over any of the image files that you wish to remove from your library. You will notice that a group of options appear directly under the image title – **Edit | Delete Permanently | View**.

Click on the **Delete Permanently** option to remove the image. You will receive a confirmation prompt. Click **OK** to confirm the image's deletion.

Media permanently deleted.

Done! Please note that once any media files and uploads have been removed from your blog, there is no way to recover them. You would need to upload them again to your blog. So **please** only delete files if you are certain that you would like to have them removed entirely from your blog's media library.

Bulk Deletion

There is an easier way to remove multiple images from your WordPress.com blog's media library.

To do this, select the checkbox next to each image that you wish to remove.

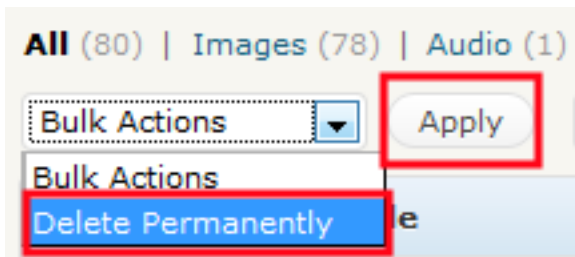

All (77) | [Images](#) (74) | [Unattached](#)

Bulk Actions ▾ Apply Show all dates ▾ Filter

<input type="checkbox"/>	File
<input checked="" type="checkbox"/>	 dsc_0010 JPG
<input checked="" type="checkbox"/>	 dsc_0018 JPG
<input checked="" type="checkbox"/>	 dsc_0004 JPG
<input checked="" type="checkbox"/>	 dsc_0444 JPG Edit Delete View
<input checked="" type="checkbox"/>	 dsc_0445 JPG
<input checked="" type="checkbox"/>	 hope JPG

Once you have selected all images that you wish to delete, refer to the **Bulk Actions** drop-down menu above the file listing. Choose the **Delete Permanently** option from the menu and click the **Apply** button.

To delete all images in view from any pages of your Media Library, you can select the primary check box and choose **Delete Permanently** from the **Bulk Actions** drop-down, as described above.

Image Optimization

When you decrease the file size for images before you insert them, uploads and pages will load faster.

This pigeon is around 235kb in size.

The pigeon below is only 72kb – less than a third of the above.

See any real differences?

Optimizing your images does 3 things:

1. It makes images quicker to upload.
2. It makes your page load faster for people looking at it.
3. You can fit more images into a limited space.

Simply making an image smaller while editing a page does not necessarily make the file size smaller.

You need to optimize the image. The original image of that pigeon is 1.2MB so that top image is already 1/6 of the size and the bottom image is 16% of the original size. But it still looks good online.

Types of Images

- JPG works best for images with gradients such as photographs.
- GIF are best for blocks of repetitive color including logos, line art, and illustrations with type.
- PNG should be used to preserve partial transparency and a large amount of colors. PNG images often take up more space, so try the GIF format first to see if it works

well for your image.

↑ Table of Contents ↑

Image Editing Software

Some have easy options to size and compress a batch of photos very quickly. Packages such as Photoshop / Paint Shop Pro will do it, but there is no need to spend money on doing this.

These are free:

- [Irfanview](#)
- [Picasa](#)
- [GIMP](#)
- [Photofiltre](#)
- [FastStone](#)
- [Pixia](#)

Flash vs. Browser Uploader

It's as easy as ever to [upload files](#) to your blog's Media Library. If the Flash uploader isn't working for you, try clicking the link for the **Browser uploader** or update your [Flash player](#).

Try the [Browser uploader](#) instead.

A different screen will load. When you are using the browser uploader, you can only upload one file at a time.

Flash uploader instead.' At the bottom, it shows '10.0 MB used, 3.0 GB (99.7%) upload space remaining' and a link to 'Space Upgrade'." data-bbox="133 651 790 830"/>

 **Upload New Media**

Allowed file types: jpg, jpeg, png, gif, pdf, doc, ppt, odt.

[Browse...](#) [Upload](#) [Cancel](#)

You are using the Browser uploader. Try the [Flash uploader](#) instead.

10.0 MB used, 3.0 GB (99.7%) upload space remaining. You can upload additional file types and increase your available space with a [Space Upgrade](#).

Upload problems

If you experience problems uploading files it may be caused by one of the following:

- The file is too large (filesize) and your connection timed out – try uploading a smaller version or try again. See the [Image Optimization](#) page for more information.
- Your image color profile or file name is not correctly set. Try [troubleshooting your image file](#).
- Your connection is slow – simply put, you may have taken so long to upload a file that your connection was dropped.
- There is a problem between your computer and the WordPress server – this may be caused by your internet provider or any number of other problems.
