How to Make an Origami Infinity Cube

Before you get started on the cubes, you will need 8 groups of 6 pieces of square paper. **Step 1:** Fold one piece of paper in half to get the halfway fold mark. **Step 2:** Open up the square and fold each side edge to the crease line you created in step 1. **Step 3:** Fold the smallest edges over to create a halfway crease going the other way. Then, open up what you folded and fold the smaller edges into the crease line you created. **Step 4:** Repeat five more times using different colors. **Step 5:** This is very tricky to explain. But, you are basically creating a small 3-D cube by interlacing each of the folded squares. **Step 6:** Repeat steps 1- 5 until you have 8 perfect little 3-D cubes. Place all 8 boxes in 2 rows with the same color showing. **Step 9:** Sticky tape the 2 boxes at each end together, horizontally. **Step 10:** Pull the hinge back on each end, and sticky tape the opposite side. **Step 11:** Fold the two ends back to the same color and pick up all 8 blocks and place them on the side. **Step 12:** Now, sticky tape the 2 boxes at each end together. **Step 13:** Pull the hinge back on both ends and tape the other side. Like you did in step 10. **Step 14:** Pick up all 8 boxes and turn over to the other side. Repeat steps 12 and 13. Although this time, you shouldn't have any boxes that are left loose. **Step 15:** Finally, turn all 8 blocks over to the opposite side you started on. They should all have the same color. **Step 16:** Stick the remaining 4 blocks together. and you are done!
