<u>Meshtastic Information and Products</u>

Just what is Meshtastic?

Meshtastic is an Open Source "Off Grid" secure text communication program that uses LoRa Radios and your cell phone to host the Meshtastic texting App. (Your Cellular Signal on your phone is not used).So, for example if you are hiking, camping or biking in areas without Cell Coverage you will be able to keep in touch with your group and know their location. Also great for emergency communications in the event of a natural disaster such as a hurricane, tornado or even a cyber attack.

Your phone *** running the Meshtastic Texting App connects to a Radio via Standard Bluetooth or Bluetooth Low Energy which actually has a great range of up to 300 FT. You can also connect directly to your phone using an OTG cable.(Heltec Modules connected to an Android Phone). The Radio connects to other Radios in the group or "MESH" via LoRa 915MHz. All of the messages in the group are relayed from Radio to Radio so the actual range can be many miles depending on obstructions.

"On Grid" and want to be "Off Grid" and more secure? Simple -Turn off your Cellular Service and your WiFi - even your Bluetooth if you use the OTG cable.
Please note: You will need at least two LoRa Radios to communicate.

<u>Here is the official website</u>

*** Keyboard units are standalone and don't require a phone, however if your keyboard unit does not have a GPS the radio can use the GPS of your phone.
