Introduction and Guidance for Using the High-Leverage Practices Continuum

This resource guides users through each of the high-leverage practices (HLPs) for inclusive classrooms and identifies specific areas to focus on at each stage of teacher development, ranging from teacher candidate to teacher leader. We recommend utilizing the continuum in conjunction with a comprehensive HLP resource. We used the book *High-Leverage Practices for Inclusive Classrooms*, edited by James McLeskey, Lawrence Maheady, Bonnie Billingsley, Mary Brownell, and Timothy Lewis, and the freely available book [High-Leverage Practices for Students With Disabilities: Revised and Updated](#), edited by Terese Aceves and Michael Kennedy, when creating this continuum. You can also find an older version of the latter book from 2017 at the same link provided, which highlights examples of each HLP at elementary and secondary levels. This continuum builds on other HLP resources by offering guidance for how to target teacher preparation, coaching/mentoring, and professional development programs to incorporate HLPs. In creating this continuum, we relied heavily on the text, figures, and resources shared in *High-Leverage Practices for Inclusive Classrooms*. We also utilized the revised HLP book to structure the continuum to fit within the pillar model. This pillar model emphasizes six “HLP pillars” as core practices, with the remaining HLPs described as “embedded” or supporting practices. We followed this structure in our continuum, which is why some of the HLPs are not in numerical order. The following visual depicts the organization of the High-Leverage Practices for Students with Disabilities into four domains: 1) Collaboration, 2) Data-Driven Planning, 3) Instruction in Behavior and Academics, and 4) Intensify and Intervene as Needed. The visual further separates the High-Leverage Practices into the Pillar HLPs and Embedded HLPs. A fully accessible version of the pillar visual can be accessed by visiting the [HLP Accessible Pillars resource](#).

This graphic has been updated for accessibility purposes for the NCDPI OEC.

The HLPs should be explicitly introduced and practiced across the continuum, with educator preparation programs, public school units, and the North Carolina Department of Public Instruction (NC DPI) sharing responsibilities to support teacher development of the practices. The stages of development include the following:

Teacher Candidate. The teacher candidate column represents the initial stages of learning about an HLP through coursework. At this stage, most of the candidate’s coursework will focus on learning about teaching methods. This column is also targeted toward education preparation programs to help identify ways to introduce the HLPs to teacher candidates.

Student Teacher. The student teacher column represents someone who is gaining experience on that HLP through practice and support from a lead teacher, as well as from faculty from an education preparation program. This stage is the first real implementation opportunity and chance for feedback for a candidate.

Practicing Teacher 1. Practicing Teacher 1 represents a licensed teacher who is starting to implement the HLPs. In the first few years, practicing teachers may require more induction and mentoring support as they translate what they have learned into practice and adjust to a new school and work environment. Knowing that the attrition rate for beginning teachers is higher than for more experienced teachers (NC DPI, 2024), the practices in this column highlight the most foundational components of each HLP to promote successful practices and avoid overwhelming new teachers.¹ If a practicing teacher has mastered what is in this column for a particular HLP, they should review the Practicing Teacher 2 column for further areas of growth.

Practicing Teacher 2. Practicing Teacher 2 represents a licensed teacher who has demonstrated knowledge of increasingly complex aspects of the HLPs. If a practicing teacher has mastered what is in this column, they should review the Teacher Leader column for further areas of growth.

Teacher Leader. A teacher leader is an expert in the field. They are someone who regularly implements the HLPs in their classroom and is able to provide guidance/mentorship to more novice teachers. You will see that some of the actions in this column focus on the teacher leader’s development of skills, whereas others are more focused on supporting other teachers. Teacher leaders may also develop coaching plans for teachers and related service providers on targeted HLPs.

Although each stage of teacher development—Teacher Candidate, Student Teacher, Practicing Teacher 1, Practicing Teacher 2, and Teacher Leader—is labeled, we want to recognize that depending on an individual’s pathway to licensure, their experience and understanding of each HLP may fall across different stages of development. The labels primarily show that there is a continuum for learning and implementing the HLPs, and these labels are not meant to describe someone’s position. In North Carolina, there are numerous pathways to licensure, and individuals may need differing levels of support

¹ In the 2022–23 school year, the attrition rate for beginning teachers (less than 3 years of teaching experience) in North Carolina was about 41.3% higher than for more experienced teachers in the state (a 15.1% beginning teacher attrition rate compared to 10.69% for non-beginning teachers).

across the continuum based on their pathway. For that reason, we recommend that individuals complete the [HLPs for Students With Disabilities Self-Assessment Tools](#), created by Victoria VanUitert and Lynn Holdheide, to identify areas of strength and growth before targeting professional learning. Throughout the continuum, you will see that some text is in boldface. This bolded text correlates to items in the self-assessment for ease of identification.

We also want to emphasize that the HLPs are important teaching practices to consider in all teaching settings, including general education, special education, inclusive classrooms, and schools that use a multi-tiered system of supports (MTSS). However, there are a few practices that you will notice are essential to educators working with students with disabilities (SWD) or exceptional children (EC), such as HLP 2, which highlights individualized education program (IEP) meetings in addition to more general meetings with families. We hope this resource can be used to help bridge divisions or silos that may exist in meeting the needs of all learners, including SWD.

Collaboration

Pillar HLP 1: Collaborate with colleagues to increase student success.

Teacher Candidate	Student Teacher	Practicing Teacher 1	Practicing Teacher 2	Teacher Leader
Alternatively licensed teachers fall across Teacher Candidate, Student Teacher, and Practicing Teacher on the continuum.				
<p>Through mock situations, describe and practice elements of effective communication with colleagues, related service providers, and parents.</p> <p>Define co-teaching and the different models used to co-teach, as well as when each is most appropriately utilized during instruction.</p> <p>Describe the special education teacher's role and responsibilities in working with general education teachers, administrators, paraprofessionals, and other support personnel.</p> <p>Interview related service providers to identify how each role can be connected to student needs.</p> <p>Explore student goals for participation and functional skills in collaboration with students, parents, and related service partners.</p>	<p>Observe co-teaching instruction, identify the different models as well as the responsibilities of the special educator and general educator throughout each approach.</p> <p>Practice the different co-teaching models.</p> <p>Participate in meetings with paraprofessionals and other support personnel and explain how their role impacts student success.</p> <p>Identify and practice communication styles (e.g., directive, collaborative) between teachers and support personnel.</p>	<p>Implement different co-teaching models effectively and flexibly given student needs and instructional context.</p> <p>Partner with paraprofessionals and support personnel to cultivate a communicative relationship and clarify roles, responsibilities, and expectations of all partners.</p> <p>Reflect on collaborative relationships with students, colleagues, and families to identify areas for improvement.</p> <p>Engage in consistent collaboration with related service providers, specialists, the student, and families to increase student success.</p> <p>Problem-solve with a mentor using data to make decisions about the services and approaches supporting students.</p>	<p>Explore how related services can be better integrated into school routines.</p> <p>Integrate evidence-based practices into grade- or school-level expectations or procedures to help facilitate co-planning and co-teaching with colleagues.</p> <p>Facilitate effective communication with students, colleagues, and families to increase their engagement in the educational process.</p> <p>Lead problem-solving meetings with colleagues, using data to make decisions about the services and approaches used to support students.</p>	<p>Provide professional learning for new and experienced teachers on strategies to collaborate with colleagues effectively and efficiently.</p> <p>Model the integration of evidence-based programs and/or practices into grade-level and/or school-level expectations.</p> <p>Model effective communication with colleagues to facilitate co-planning and co-teaching</p> <p>Provide guidance and planning structures to enable effective communication with students, colleagues, and families.</p>

Pillar HLP 3: Collaborate with families to support student learning and secure needed services.

Teacher Candidate	Student Teacher	Practicing Teacher 1	Practicing Teacher 2	Teacher Leader
Alternatively licensed teachers fall across Teacher Candidate, Student Teacher, and Practicing Teacher on the continuum.				
<p>Articulate IDEA requirements for strong family-educator collaboration.</p> <p>Locate state and local resources for families that ensure procedural safeguards and rights.</p> <p>Learn strategies to identify and address biases (implicit and explicit) as well as ways to implement culturally and linguistically relevant practices to enhance</p>	<p>Observe the cooperating teacher's interactions with families and note effective strategies for engagement and relationship building.</p> <p>Practice strategies for effective two-way communication and relationship building.</p> <p>Collaborate with the cooperating teacher, school supervisor, and</p>	<p>Implement strategies of effective two-way communication and relationship building to continuously improve and reflect on family engagement and relationships.</p> <p>Identify and understand sociocultural factors in the local community and adjust instruction to be culturally and linguistically relevant.</p> <p>Create and practice strategies to help families prepare for</p>	<p>Advocate for increased family engagement in the learning process.</p> <p>Develop effective strategies for empowering and supporting families as they seek needed resources and services.</p> <p>Seek professional and personal opportunities to develop culturally and linguistically relevant practices and build relationships in the community.</p> <p>Inform school/district efforts to improve family collaboration.</p>	<p>Model effective strategies for empowering and supporting families as they seek needed resources and services.</p> <p>Mentor other teachers in effective collaboration strategies.</p> <p>Support colleagues in establishing effective and culturally responsive two-way communication among families across all stages of problem-solving processes (e.g., IEP, MTSS).</p>

Teacher Candidate	Student Teacher	Practicing Teacher 1	Practicing Teacher 2	Teacher Leader
Alternatively licensed teachers fall across Teacher Candidate, Student Teacher, and Practicing Teacher on the continuum.				
family–educator collaboration. Identify and rehearse effective <i>two-way</i> communication and relationship-building strategies with families.	families throughout the IEP process.	meetings and feel informed throughout the IEP process. Consider methods of accessibility (e.g., language) for families so that they can effectively participate in their child’s learning.	Communicate with parents using a language and method that would make the information most accessible. Intentionally learn about and honor each student’s cultural background and use that knowledge to design instruction.	Consistently seek to understand the perspectives and cultural differences of families to support student learning.

Glossary

ABC (Antecedent-Behavior-Consequence). The ABC model can be used to better understand why certain behaviors happen by looking at the antecedent (or action that precedes the behavior) and the consequence (or result of the behavior).

AT (Assistive Technology). AT includes any product, software, system, or equipment that is used to maintain or improve the functional capabilities of students with disabilities (ATIA, n.d.). While AT can be utilized outside of the learning environment to support the daily living of persons with disabilities, our focus is on its use in the classroom.

BIP/BSP (Behavior Intervention Plan/Behavior Support Plan). A BIP (or BSP) is a customized written plan typically developed based on the results of a functional behavior assessment. By identifying the root cause of challenging behavior, the plan outlines modifications that need to be made to the student's environment and specific skills and strategies that need to be explicitly taught, along with individualized motivators that should be used to reinforce positive behaviors. The plan should also include components of progress monitoring and a systematic approach to addressing problematic behaviors when they occur. Utilizing a team approach, including the student's family, the goal is to improve the student's learning and successful participation in the school environment (NC DPI, n.d.).

CSI (Cognitive Strategy Instruction). CSI is an explicit instructional approach that teaches students specific and general cognitive strategies to improve learning and performance by facilitating information processing. It helps students develop and use metacognition and specific strategies to learn, solve problems, and self-regulate and can decrease the cognitive load to allow students to access new content and skills. Examples include spaced learning, using real-world examples, summarizing, self-questioning, visible thinking strategies, and more.

CT (Cooperating Teacher). A CT is an experienced teacher assigned by an educator preparation program to mentor a preservice or student teacher. To serve as a cooperating teacher in the state of North Carolina, the teacher must be licensed in the area in which they are mentoring, have at least a proficient rating on the most recent teacher evaluation, and have principal approval. Note that the terms *mentor teacher* and *clinical educator* may be used interchangeably for *cooperating teacher*, depending on the context and the educator preparation program.

DBI (Data-Based Individualization). DBI is a process for targeting academic or behavior interventions to meet the needs of a student. The process involves systematically collecting data to monitor student progress and using research-based adaptation strategies to individualize and intensify the intervention (NCII, n.d.).

EC (Exceptional Child/Children). Used interchangeably with "student(s) or child/children with disability[ies]". In North Carolina, ECs are children who have been evaluated in accordance with NC Policies and determined eligible to receive special education and related services as a child with one of the following disabilities: autism, deaf-blindness, deafness, development delay, hearing impairment, intellectual disability, multiple disabilities, orthopedic impairment, other health impairment, serious

emotional disability, specific learning disability, speech or language impairment, traumatic brain injury, or visual impairment (NC 1500-2.4, [NC Policies Governing Services for Children With Disabilities](#)).

EPP (Education Preparation Program). An EPP provides a course of study to prepare aspiring teachers with the knowledge, skills, and experience necessary to teach students (City Teaching Alliance, 2024). These programs are usually offered by institutions of higher education or other specialized organizations. The essential components of traditional EPPs include academic coursework, classroom experience, and certification preparation.

FBA (Functional Behavior Assessment). According to the Office of Special Education and Rehabilitative Services (OSERS), an FBA is a process through which “understanding is sought of the function and purpose of a child’s specific, interfering behavior and factors that contribute to the behavior’s occurrence and nonoccurrence. The outcome of the assessment should focus on developing effective behavioral interventions, supports, and other strategies to mitigate or eliminate the interfering behavior” (U.S. Department of Education, OSERS, 2024).

HLPs (High-Leverage Practices). HLPs were first developed by teacher education researchers Dr. Deborah Ball, Dr. Pam Grossman, and Dr. Mark Windschitl, who worked together to identify specific practices that educators could implement to improve their quality of teaching. Windschitl et al. (2012) defined HLPs as “a set of practices that are fundamental to support K–12 student learning, and that can be taught, learned, and implemented by those entering the profession” (p. 880). Understanding the impact of the original HLPs, experts across the Council for Exceptional Children (CEC) Professional Standards and Practice Committee, the Teacher Education Division of CEC, and the CEEDAR Center at the University of Florida worked together to target HLPs for students with disabilities.

IDEA (Individuals with Disabilities Education Act). IDEA is a federal law that requires that all children with disabilities have a free and appropriate public education available to them that offers services to meet their individualized needs and prepare them for the future (NC DPI, n.d.).

IEP (Individualized Education Program). An IEP is a formal written plan that is developed by a team that is knowledgeable of the unique needs of the student with a disability. The plan describes the student’s strengths and any parental concerns for enhancing the education of their child and includes when, where, and how often services will be provided. The plan must be developed and implemented in accordance with North Carolina policies, specifically NC 1503-4.1 through NC 1503-5.1 ([NC Policies Governing Services for Children With Disabilities](#)).

Mentor Teacher. The term *mentor teacher* is used across contexts to generally refer to a more experienced teacher who guides a more novice teacher. Specifically, it can be used by educator preparation programs to describe an experienced in-service teacher who mentors a student teacher (also see cooperating teacher), or it can be used to refer to an experienced teacher at a school site who mentors a beginning residency license teacher.

MTSS/PBIS (Multi-Tiered System of Supports/Positive Behavioral Interventions and Supports). An MTSS is a system of school improvement that acts as a proactive and preventative framework and uses data sources to increase student achievement. A comprehensive, whole-child approach to improving outcomes is utilized, including social, emotional, and behavior aspects (AIR, n.d.).

PLAAFP (Present Level of Academic Achievement and Functional Performance). The PLAAFP is a statement within the individualized education program that outlines the skill strengths and skill deficits of the student, thereby leading to the ambitious annual goals that target what the student needs to learn in order to close gaps.

RL (Residency License/Residency Licensure). This is an alternative pathway toward teacher licensure in which “qualified individuals obtain a teaching position and begin teaching right away as a Resident while obtaining a clear professional educator’s license” (N.C. DPI, n.d., Residency Licensure).

SDI (Specially Designed Instruction). SDI is instruction that is adapted to fit the unique needs of the learner. It accounts for students’ disabilities and provides instructional modifications to address IEP goals and increase student access to the general education curriculum (CEC, n.d.).

SEL (Social-Emotional Learning). SEL is the developmental process through which children and adults learn skills to manage emotions, establish and maintain healthy relationships, and achieve personal and collective goals (NC DPI, n.d.).

SMART (Specific, Measurable, Achievable, Realistic, and Time-Bound) Goal. The acronym SMART is used to guide goal setting to ensure that the goal is relevant and achievable.

SWD (Student[s] With Disability[ies]). Used interchangeably with “exceptional child/children.” In North Carolina, exceptional children are children who have been evaluated in accordance with NC Policies and determined eligible to receive special education and related services as a child with one of the following disabilities: autism, deaf-blindness, deafness, development delay, hearing impairment, intellectual disability, multiple disabilities, orthopedic impairment, other health impairment, serious emotional disability, specific learning disability, speech or language impairment, traumatic brain injury, or visual impairment (NC 1500-2.4, [NC Policies Governing Services for Children With Disabilities](#)).

UDL (Universal Design for Learning). UDL is a framework used to design learning environments that are inclusive, accessible, and equitable for all learners (CAST, 2024). The UDL framework supports changing the environmental design instead of fixing the problem based on a perceived deficit within the learner. “The goal of UDL is [learner agency](#) that is purposeful & reflective, resourceful & authentic, strategic & action-oriented” (CAST, 2024). The [UDL Guidelines 3.0](#) emphasize designing learning experiences that include multiple means of engagement, representation, action, and expression through access, support, and executive function.

Additional Resources

[Council for Exceptional Children](#) - The Council for Exceptional Children (CEC) is the largest professional organization dedicated to improving the educational success of individuals with disabilities or gifts. CEC advocates for appropriate government policies, sets professional standards, provides professional development, advocates for underserved individuals with exceptionalities, and helps professionals obtain conditions and resources for effective professional practice.

[HLP Alignment Tool](#) - This interactive alignment tool, developed in collaboration with CEEDAR and the Council for Exceptional Children (CEC), identifies which IRIS resources provide information on HLPs.

[High Leverage Practices and Students With Extensive Support Needs \(book\)](#) - Building on the work of *High Leverage Practices (HLP) for Inclusive Classrooms*, this companion text explores how each HLP can be applied to the education of students with extensive support needs.

[National Center on Intensive Intervention \(NCII\)](#) - The National Center on Intensive Intervention (NCII) is an organization housed at the American Institutes for Research and funded by the U.S. Department of Education. Its mission is to provide resources and technical assistance to support the implementation of intensive interventions for students with severe and persistent learning or behavioral needs.

[Virginia's TTAC](#) The TTAC is the Training and Technical Assistance Center under the Virginia Department of Education providing professional development and support to schools to address the accountability and outcomes of students with disabilities.

[What Works Clearinghouse](#) - Established in 2002 as a part of the Institute of Education Sciences at the US Department of Education, the WWC's purpose is to review and summarize research on educational programs, products, practices and policies, providing the public with information about what works in education. \
