AH Hotkeys - Skyrim Hotkey Manager SSE by RealAntithesis

<https://www.nexusmods.com/skyrimspcialedition/mods/15761>

IMPORTANT NOTE ABOUT THIS MOD: I installed this mod after the quest “No One Escapes Cidhna Mine” broke the Favorites Group Hotkeys function of SkyUI (presumably because of your inventory being temporarily cleared out in the course of the quest). I found that the quest messed this mod up for me as well, though thankfully it can be made to work if you run into the same problem yourself (though it’ll require manually recreating your hotkey equip sets - Make sure to write down what’s in each one before you enter the Markarth Shrine of Talos to start the quest & be thrown into Cidhna Mine). To fix this mod if the Cidhna Mine quest borks it, follow these steps **in this exact order** (these instructions assume you’re using Windows):

1. Save your game, and then quit to the desktop.
2. Remove this mod from your load order in Vortex (or whatever mod manager you’re using)
3. In File Explorer, go to ThisPC > Documents > My Games > Skyrim Special Edition > JCUser, and delete the folder AH HOTKEYS DATA
4. Launch the game, load the save you made, re-save over it, and then quit to the desktop again.
5. Re-install the mod using Vortex (or whatever mod manager you’re using)
6. Launch the game, load your save, and then go to the Mod Configuration Menu to set the mod and hotkey equip sets up again (you may have to wait a bit after loading into the game for the mod to show up in the MCM list). Make sure to save each time you create a new hotkey equip set!
