Number of page visits has disappeared

At the bottom of every page in the wiki, it used to display how many times that page has been visited. That was very helpful information. The wiki no longer displays this information. I'm not sure when the number of page visits count disappeared, but we just noticed it yesterday.

Actually, two things are gone, one is the 'last updated on' date, which is useful when determining versions, should you have an old printout and need to reprint it for example, and the other is the visit statistic mentioned.

Appears to have been gone since December sometime, maybe even late November at the earliest.
