Thornridge Science Club

Fayun Williams, TR Bagpipe Reporter
September 23, 2025

If you love asking questions, doing cool experiments, and learning how the world works, then the Thornridge Science Club is the place for you!

Led by the amazing Miss Raich, the club is full of exciting labs, fun activities, and awesome science experiences. Every week, students get together after school to explore new ideas, test out experiments, and discover how science connects to everyday life.

In the Science Club, you won't just read about science, you will *do* science. Students have made slime, launched water rockets, built mini bridges and even extracted DNA from strawberries. There's always something hands-on and fun going on in the lab.

Last semester, the club took a field trip to a science museum, where students got to explore real lab equipment and talk to real scientists. Some weeks, they even use virtual reality to go on science adventures without leaving the classroom, that is actually very cool to me.

Miss Raich, club leader and also a science teacher, is known for her energy, creativity, and love for all things science. She makes sure every student feels welcome and included. She is a really good teacher and teaches with love and care.

In the Thornridge Science Club, students learn how to work together, think like scientists, and try new things. The club also gets involved in science fairs and other fun events where students can show off what they’ve learned.

If you're a 9th grader who wants to meet new people, learn in a fun way, and maybe even discover your future career, come check out the Science Club. No experience needed just brings your curiosity.
