

Manajemen Pelayanan Kesehatan Vol: 1, No 1, 2024, Page: 1-10

Title

Author*, Author

Affiliation

TEMPLATE INSTRUCTIONS - The manuscript should normally be 8-15 pages, including references, tables, and figures. Do not change page geometry, typography, heading styles, or reference format. For double-anonymized review, remove author-identifying information from the review file while keeping complete metadata in OJS.

Abstract: The abstract should be clear, concise, and descriptive. It should stand alone, meaning there should be no quotations, figures, or equation formats in the abstract. Think of the abstract as an advertisement for your article. The abstract should inform prospective readers about what you did and highlight the main findings. This abstract should provide a brief background of the problem (preferably 1-2 sentences), a clear statement of the manuscript's objectives, a brief overview of the research methods, and a concise summary of the results/findings (not discussion), and a brief conclusion. Avoid using technical jargon and uncommon abbreviations. You should be accurate, concise, clear, and specific. Use words that reflect precise meaning. The abstract should be precise and honest. Please adhere to the word limit (150-250 words) (9pt, Palatino Linotype).

Keywords: keyword 1, keyword 2, keyword 3 (minimum 3 keyword, maximum 5)

Introduction

The introduction should briefly place the study in a broad context and highlight why it is important. It should define the purpose of the work and its significance. The current state of the research field should be carefully reviewed and key publications cited. Please highlight controversial and diverging hypotheses when necessary. Finally, briefly mention the main aim of the work and highlight the principal conclusions. As far as possible, please keep the introduction comprehensible to scientists outside your particular field of research. APA style should be employed for citations and references. See the end of the document for further details on references.

Methodology

Methods should be described with sufficient details to allow others to replicate and build on the published results. Please note that the publication of your manuscript implies that you must make all materials, data, computer code, and protocols associated with the publication available to readers. Please disclose at the submission stage any restrictions on the availability of materials or information. New methods and protocols should be described in detail while well-established methods can be briefly described and appropriately cited.

Research manuscripts reporting large datasets that are deposited in a publicly available database should specify where the data have been deposited and provide the relevant accession numbers. If the accession numbers have not yet been obtained at the time of submission, please state that they will be provided during review. They must be provided prior to publication.

Interventionary studies involving animals or humans, and other studies that require ethical approval, must list the authority that provided approval and the corresponding ethical approval code.

Result and Discussion

In the Results section, summarize the collected data and the analysis performed on those data relevant to the issue that is to follow. The Results should be clear and concise. It should be written objectively and factually, and without expressing personal opinion. It includes numbers, tables, and figures (e.g., charts and graphs). Number tables and figures consecutively in accordance with their appearance in the text.

All figures and tables should be cited in the main text as Figure 1, Table 1, etc.

Table 1: An example of a table (font size 10pt)

An example of a heading	Column A (t)	Column B (T)
Add an entry	1	2
Add an entry	1	2
Add an entry	1	3

Figure 1. This is a figure. Schemes follow the same formatting.

Summarize the collected data and the analysis performed on those data relevant to the issue that is to follow. The Result should be clear and concise. It should be written

objectively and factually, and without expressing personal opinion. It includes numbers, tables, and figures (e.g., charts and graphs). Number tables and figures consecutively in accordance with their appearance in the text.

Discussion

This section should explore the significance of the results of the study. A combined Results and Discussion section is also appropriate. This section allows you to offer your interpretation and explain the meaning of your results. Emphasize any theoretical or practical consequences of the results.

The Discussion section should be a reasoned and justifiable commentary on the importance of your findings. This section states why the problem is important; what larger issues and what propositions are confirmed or disconfirmed by the extrapolation of these findings to such overarching issues.

Conclusion

Answer the research objective directly in one to three paragraphs. Emphasize the main contribution and implications without repeating the abstract or introducing new data. Acknowledge major limitations and directions for further research.

Research Transparency And Ethics Statements

Author Contributions (CRediT): [Author 1: Conceptualization, Methodology, Writing - Original Draft, Funding Acquisition; Author 2: Investigation, Data Curation, Software, Visualization; Author 3: Formal Analysis, Validation, Writing - Review & Editing; Author 4: Supervision, Project Administration, Resources.]

Funding: [State the full funding agency name, funding scheme, grant number in square brackets, and year; or state: This research received no external funding.]

Conflicts of Interest: [Disclose financial and non-financial interests, or state: The authors declare no conflicts of interest.]

Ethics Approval and Informed Consent: [State the ethics committee, institution, approval number and date, informed-consent process, and confidentiality safeguards; if not required, justify the documented exemption or low-risk status.]

Statement on the Use of Artificial Intelligence: [Identify any AI tool and its purpose, and affirm author verification and accountability; if unused, state: The authors did not use generative AI in preparing this manuscript. AI cannot be listed as an author.]

References

Use APA Style, seventh edition, and a reference manager such as Zotero, Mendeley, or EndNote. Ensure every in-text citation appears in the reference list and vice versa. Editorial quality target: at least 80% peer-reviewed primary sources and 80% published within the most recent 10 years, except seminal works. Present DOI values as resolvable https://doi.org/... links and delete all examples before submission.
